***Is It Safe? Protecting Your Computer, Your Business, and Yourself Online Oct 15 2021 Is It Safe? PROTECTING YOUR COMPUTER, YOUR BUSINESS, AND YOURSELF ONLINE IDENTITY THEFT. DATA THEFT. INTERNET FRAUD. ONLINE SURVEILLANCE. EMAIL SCAMS. Hacks, attacks, and viruses. The Internet is a dangerous place. In years past, you could protect your computer from malicious activity by installing an antivirus program and activating a firewall utility. Unfortunately, that's no longer good enough; the Internet has become a much darker place, plagued not only by rogue software but also by dangerous criminals and shadowy government agencies. Is It Safe? addresses the new generation of security threat. It presents information about each type of threat and then discusses ways to minimize and recover from those threats. Is It Safe? differs from other security books by focusing more on the social aspects of online security than purely the technical aspects. Yes, this book still covers topics such as antivirus programs and spam blockers, but it recognizes that today's online security issues are more behavioral in nature-phishing schemes, email scams, and the like. Are you being scammed? Learn how to spot the newest and most insidious computer security threats-fraudulent retailers, eBay scammers, online con artists, and the like. Is your identity safe? Avoid being one of the nine million Americans each year who have their identities stolen. Today's real Internet threats aren't viruses and spam. Today's real threat are thieves who steal your identity, rack up thousands on your credit card, open businesses under your name, commit crimes, and forever damage your reputation! Is Big Brother watching? Get the scoop on online tracking and surveillance. We examine just who might be tracking your online activities and why. Is your employer watching you? How to tell when you're being monitored; and how to determine what is acceptable and what isn't. Michael Miller has written more than***

**Modeling and Optimization in Software-Defined Networks Jan 18 2022 This book provides a quick reference and insights into modeling and optimization of software-defined networks (SDNs). It covers various algorithms and approaches that have been developed for optimizations related to the control plane, the considerable research related to data plane optimization, and topics that have significant potential for research and advances to the state-of-the-art in SDN. Over the past ten years, network programmability has transitioned from research concepts to more mainstream technology through the advent of technologies amenable to programmability such as service chaining, virtual network functions, and programmability of the data plane. However, the rapid development in SDN technologies has been the key driver behind its evolution. The logically centralized abstraction of network states enabled by SDN facilitates programmability and use of sophisticated optimization and control algorithms for enhancing network performance, policy management, and security. Furthermore, the centralized aggregation of network telemetry facilitates use of data-driven machine learning-based methods. To fully unleash the power of this new SDN paradigm, though, various architectural design,**

**Zhang Neural Networks for Online Solution of Time-Varying Linear Inequalities Jun 10 2021 In this chapter, a special type of recurrent neural networks termed "Zhang neural network" (ZNN) is presented and studied for online solution of time-varying linear (matrix-vector and matrix) inequalities. Specifically, focusing on solving the time-varying linear matrix-vector inequality (LMVI), we develop and investigate two different ZNN models based on two different Zhang functions (ZFs). Then, being an extension, by defining another two different ZFs, another two ZNN models are developed and investigated to solve the time-varying linear matrix inequality (LMI). For such ZNN models, theoretical results and analyses are presented as well to show their computational performances. Simulation results with two illustrative examples further substantiate the efficacy of the presented ZNN models for time-varying LMVI and LMI solving.**

**Multi-Objective Optimization in Chemical Engineering Mar 20 2022 For reasons both financial and environmental, there is a perpetual need to optimize the design and operating conditions of industrial process systems in order to improve their performance, energy efficiency, profitability, safety and reliability. However, with most chemical engineering application problems having many variables with complex inter-relationships, meeting these optimization objectives can be challenging. This is where Multi-Objective Optimization (MOO) is useful to find the optimal trade-offs among two or more conflicting objectives. This book provides an overview of the recent developments and applications of MOO for modeling, design and operation of chemical, petrochemical, pharmaceutical, energy and related processes. It then covers important theoretical and computational developments as well as specific applications such as metabolic reaction networks, chromatographic systems, CO2 emissions targeting for petroleum refining units, ecodesign of chemical processes, ethanol purification and cumene process design.
