FROM THE PREFACE The purpose of this laboratory manual is to facilitate the understanding of the most relevant unit operations in food engineering. The first chapter presents information on how to approach laboratory experiments; topics covered include safety, preparing for a laboratory exercise, effectively performing an experiment, properly documenting data, and preparation of laboratory reports. The following eleven chapters cover unit operations

centered on food applications: dehydration . . . . , thermal processing, friction losses in pipes, freezing, extrusion, evaporation, and physical separations. These chapters are systematically organized to include the most relevant theoretical background pertaining to each unit operation, the objectives of the laboratory exercise, materials and methods . . . , expected results, examples, questions, and references. The experiments presented have been designed for use with generic equipment to facilitate the adoption of this manual . . .

**International Coal Preparation Congress 2010 Conference Proceedings** Oct 09 2021 The challenges facing the coal preparation industry have never been more complex or daunting: China, India, and South Africa are experiencing unprecedented growth in the use of coal. India is expected to be the world's largest importer of coal through 2030. New environmental regulations in the United States and elsewhere are forcing operators to be even more innovative and resourceful. How will the burgeoning demand affect global pricing? How can coal preparation companies employ more effective cleaning processes and technologies to reduce the environmental footprint of their mining facilities and waste storage areas? You'll find answers to these and hundreds of other critical questions in International
