Out of the Red Aug 06 2021 Frank Tannenbaum Outstanding Book Award from the American Society of Criminology? Faculty Senate Award for Research from Loyola University New Orleans? Out of the Red is one man's pathbreaking story of how social forces and personal choices combined to deliver an unfortunate fate. After a childhood of poverty, institutional discrimination, violence, and being thrown away by the public education system, Bolden's life took him through the treacherous landscape of street gangs at the age of fourteen. The Bloods offered a sense of family, protection, excitement, and power. Incarcerated during the Texas prison boom, the teenage former gangster was thrust into a fight for survival as he navigated the perils of adult prison. As mass incarceration and prison gangs swallowed up youth like him, survival meant finding hope in a hopeless situation and carving a path to his own rehabilitation. Despite all odds, he forged a new path through education, ultimately achieving the seemingly impossible for a formerly incarcerated ex-gangbanger.

Computational Business Analytics Oct 08 2021 Learn How to Properly Use the Latest Analytics Approaches in Your Organization Computational Business Analytics presents tools and techniques for descriptive, predictive, and prescriptive analytics applicable across multiple domains. Through many examples and challenging case studies from a variety of fields, practitioners easily see the connections to their own problems and can then formulate their own solution strategies. The book first covers core descriptive and inferential statistics for analytics. The author then enhances numerical statistical techniques with symbolic artificial intelligence (AI) and machine learning (ML) techniques for richer predictive and prescriptive analytics. With a special emphasis on methods that handle time and textual data, the text: Enriches principal component and factor analyses with subspace methods, such as latent semantic analyses Combines regression analyses with probabilistic graphical modeling, such as Bayesian networks Extends autoregression and survival analysis techniques with the Kalman filter, hidden Markov models, and dynamic Bayesian networks Embeds decision trees within influence diagrams Augments nearest-neighbor and k-means clustering techniques with support vector machines and neural networks These approaches are not replacements of traditional statistics-based analytics; rather, in most cases, a generalized technique can be reduced to the underlying traditional base technique under very restrictive conditions. The book shows how these enriched techniques offer efficient solutions in areas, including customer segmentation, churn prediction, credit risk assessment, fraud detection, and advertising campaigns.

The Future of the Electronic Marketplace May 03 2021 The electronic marketplace is a global one, and it's changing every aspect of the consumer-vendor relationship. The marketplace is the place of exchange between buyer and seller. Once one rode a mule to get there; now one rides the Internet. An electronic marketplace can span two rooms in the same building, or two continents. How individuals, firms, and organizations approach and define the electronic marketplace of the future depends on people's ability to ask the right questions now and to take advantage of the opportunities that will arise over the next few years. The contributors to this volume are prime movers in major industries that are remaking themselves in order to shape the global marketplace. They examine the consumers' new powers to assess and exchange goods and services over unparalleled distances. They discuss the opportunities and risks posed by the new integration between manufacturer and consumer, by the erosion of centralized authority, by real-time choice in every financial contingency, and by the fact that travel and transportation have been delegated to the machine processes that can best handle them. They also reflect on how to set an intelligent value on the coming changes, on the tools and procedures required to create this new marketplace of marketplaces. Contributors Les Alberthal, William D. Bandt, Robert J. Bonometti, David Braunschvig, Stephen D. Crocker, Walter Forbes, Denos Gazis, Daniel E. Geer, Jr., Irving Goldstein, Edward D. Horowitz, Daniel P. Keegan, Raymond W. Smith, Russel B.
