The second edition of Extrusion is designed to aid operators, engineers, and managers in extrusion processing in quickly answering practical day-to-day questions. The first part of the book provides the fundamental principles, for operators and engineers, of polymeric materials extrusion processing in single and twin screw extruders. The next section covers advanced topics including troubleshooting, auxiliary equipment, and coextrusion for operators, engineers, and managers. The final part provides applications case studies in key areas for engineers such as compounding, blown film, extrusion blow molding, coating, foam, and reprocessing. This practical guide to extrusion brings together both equipment and materials processing aspects. It covers basic and advanced topics, for reference and training, in thermoplastics processing in the extruder. Detailed reference data are provided on such important operating conditions as temperatures, start-up procedures, shear rates, pressure drops, and safety. A practical guide to the selection, design and optimization of extrusion processes and equipment Designed to improve production efficiency and product quality Focuses on practical fault analysis and troubleshooting techniques This basic source for identification of U.S. manufacturers is arranged by product in a large multi-volume set. Includes: Products & services, Company profiles and Catalog file. Discover BIM: A better way to build better buildings Building Information Modeling (BIM) offers a novel approach to design, construction, and facility management in which a digital representation of the building product and process is used to facilitate the exchange and interoperability of information in digital format. BIM is beginning to change the way buildings look, the way they function, and the ways in which they are designed and built. The BIM Handbook, Third Edition provides an in-depth understanding of BIM technologies, the business and organizational issues associated with its implementation, and the profound advantages that effective use of BIM can provide to all members of a project team. Updates to this edition include: Information on the ways in which professionals should use BIM to gain maximum value New topics such as collaborative working, national and major construction clients, BIM standards and guides A discussion on how various professional roles have expanded through the widespread use and the new avenues of BIM practices and services A wealth of new case studies that clearly illustrate exactly how BIM is applied in a wide variety of conditions Painting a colorful and thorough picture of the state of the art in building information modeling, the BIM Handbook, Third Edition guides readers to successful implementations, helping them to

avoid needless frustration and costs and take full advantage of this paradigm-shifting approach to construct better buildings that consume fewer materials and require less time, labor, and capital resources. Between 1999-2006 Addyman Archaeology carried out extensive archaeological excavations on the peninsular site of Kirk Ness, North Berwick, during the building, landscaping and extension of the Scottish Seabird Centre. This book presents the results of these works but its scope is much broader. Against the background of important new discoveries made at the site it brings together and re-examines all the evidence for early North Berwick – archaeological, historical, documentary, pictorial and cartographic – and includes much previously unpublished material. An essential new resource, it opens a fascinating window on the history of the ancient burgh. Kirk Ness is well known as the site of the medieval church of the parish and later royal burgh of North Berwick but it has long been suggested that it was also a centre of early Christian activity. The dedication of the church to St Andrew was speculatively linked to the translation of the Saint's relics to St Andrews in Fife in the 8th century. An early medieval component of the site was indeed confirmed by the excavation, with structural remains, individual finds and an important new series of radiocarbon dates. Occupation of a domestic character may possibly reflect a monastic community associated with an early church. Individual finds included stone tools, lead objects, ceramic material and a faunal assemblage that included bones of butchered seals, fish and seabirds such as the now-extinct Great Auk. The site continued in use as the medieval and early post-medieval parish and burgh church of St Andrew. In this period Kirk Ness and its harbour was an important staging point for pilgrims on route to the shrine of St Andrew in Fife. Domestic occupation discovered in the excavations is likely to be associated with a pilgrims' hospice, also suggested in historical sources. This publication also provides a new analysis of the church ruin and an account of the major unpublished excavation of the site carried out in 1951-52 by the scholar and antiquary Dr James Richardson, Scotland's first Inspector of Ancient Monuments and resident of North Berwick. The excavations also revealed areas of the cemetery associated with the church, dating to the 12th–17th centuries, where inhumations presented notable contrasts in burial practice. Osteological study shed much light upon the health and demographics of North Berwick's early population and identified one individual who met with a particularly violent death.
