Triassic-Jurassic Rifting Dec 01 2020 Extensive field studies on the African and North American plates during this past decade have yielded a wealth of new data and ideas about rift basins and the origin of passive margins. New surface and subsurface basins have been identified; fossils abound in strata that only recently were considered barren; oil exploration is being actively pursued in continental strata of the Richmond-Taylorville, Sanford and Newark basins, Late Triassic marine strata have been identified in Georges Bank off the coast of Massachusetts, and the roles of wrench tectonics, successor basins and listric normal faults have challenged the classical view that these are simple extensional basins. This two part work brings together representative examples of these studies. It is not intended as an exhaustive synthesis of the subject, but rather a vehicle to present new data, new ideas and alternative views. Some of the papers present regional summaries, others attempt to relate local features to regional questions, while others describe modern rift basins as possible analogs of early Mesozoic basins. Geologic data from the Atlantic passive margins record that continental rifting of central Pangaea occurred during the latest Triassic-earliest Jurassic (Liassic), and that sea-floor spreading probably began no later than the Middle Jurassic. The primary subject of this book focuses on the Triassic-Jurassic rifting events that led to the breakup of Pangaea and the opening of the central Atlantic Ocean. Whereas other treatises have focused on the origin of the passive margins, inferred primarily from geophysical data of the offshore basins, this volume primarily and uniquely focuses on land-based field studies of the onshore synrift basins. Offshore studies of synrift basins are also included and add substantially to our understanding of the breakup. However, the onshore data base, while complementary, is different, thus providing researchers with a different insight to the questions at hand. The book is organized into four sections. Section 1, Pangaeon Plate in Time and Space, first locates Pangaea in space and then places the Triassic basins within an historical context on the Alleghanian-Variscan Orogens. Section 2, the offshore and onshore basins of the North

American and African Plates, comprises about 70% of all papers in this book, and includes papers on structural geology, petrology, paleontology, sedimentation, organic geochemistry, vulcanism and mineral resources. Section 3, Related Mesozoic Atlantic Rift Basins, includes papers on Iberia, Western Europe, the Benue Trough and Brazil. The final section of the book, Analogs, includes the rift basins of East Africa, the Red Sea, the Gulf of Elat (Aqaba), the Dead Sea and the Rio Grande. The book is richly illustrated throughout with figures, photographs, tables and fold-out maps, including nine in full colour.

Galápagos: An Encyclopedia of Geography, History, and Culture Aug 09 2021 This encyclopedia provides readers with a comprehensive look at the Galápagos Islands, from the wildlife and scientists that made them famous to the challenges and issues the islands face today. In the mid-1800s, the Galápagos Islands served as Charles Darwin's playground, a volcanic archipelago where he famously worked on his theories of evolution and natural selection. But who actually discovered the islands? Why didn't any country claim them for over 200 years? And is ecotourism hurting or helping these mysterious islands? This volume explores the history, science, and culture of the Galápagos Islands. A Preface, Introduction, Chronology, and Galápagos at a Glance primer introduce readers to the islands that are so famously associated with Charles Darwin. Twelve thematic essays allow readers to explore topics such as evolution, the geology of the islands, invasive species, and tourism in depth. Topical entries follow, covering key individuals and organizations as well as other important concepts and ideas. Thirteen primary document excerpts allow readers to study firsthand accounts from explorers and visitors to the islands. Appendices, a glossary, a bibliography, and sidebars round out the text. Students of history, geography, and science will find this volume informative, while general readers will be intrigued to learn about these unique islands. Thematic essays introduce readers to the Galápagos Islands, providing deep coverage on the geography and geology of the islands, as well as such topics as Charles Darwin, evolution, tourism, and other topics. Alphabetically arranged topical entries allow readers to search for a wide range of topics, complete with cross-references and Further Readings. Primary document excerpts from scientists and explorers provide readers with firsthand accounts of travelers' observations and experiences on the islands. Appendices provide context about the islands and Charles Darwin's expedition in 1835 that helped to make the islands famous. A Glossary helps to define key terms and concepts for readers. A Chronology outlines key events through history that helped to shape the Galápagos Islands as we know them today.

Trends in Acarology Jun 26 2020 Mites and ticks are everywhere and acarologists go after them – some explore their bewildering diversity, others try to understand their how and why. For the past 50 years, the International Congress of Acarology has been the forum for worldwide communication on the knowledge of Acari, helping researchers and students to look beyond their disciplines. Many mites and ticks are economic factors as they are pests of agricultural, veterinary and medical importance, and several species have become model organisms in modern biology. The 96 contributions to Trends in Acarology – reflecting fields as molecular biology, biochemistry, physiology, microbiology, pathology, ecology, evolutionary biology, systematic biology, soil biology, plant protection, pest control and epidemiology – have been reviewed and carefully edited. This volume contains a wealth of new information, that may stimulate research for many years to come.
