BANTAM User Guide Jun 18 2020 BANTAM is the first modeling language specifically designed for applications in Biometrics and Token Technology. It represents a significant step forward for the design and implementation of biometric and related technology applications in that: - it is very simple to learn and use; - it offers a consistent system of documentation and a clarity of presentation which make the accurate description of user requirements much easier; - it provides a complete methodology for managing the project from original business case, through procurement and implementation, to subsequent training and support. "The User Guide" provides much more than just a guide to the Bantam methodology: readers will also find lots of good advice on program management in general and will gain an insight into designing biometric and related applications. It will be essential reading for anyone who is serious about biometrics and related technologies, including governmental/corporate end-users, systems integrators, biometric vendors, application developers and device manufacturers. It will also be useful background reading for advanced students and IT and management consultants. Reviews of Julian Ashbourn's first book: "Biometrics: Advanced Identity Verification": "You could attend a dozen conferences and not come away with the kind of overview presented in this new book". Dave Mintie, Connecticut Department of Social Services " a highly readable, entertaining guidebook that should serve as a welcome companion for anyone who must promote, explain, justify, or control an organization's transition to biometric technology." Richard Norton, Executive Director, International Biometrics Industry Association

Handbook of Environmental Economics Jan 26 2021 Much applied environmental economics is concerned with the valuation of changes in environmental quality. Obtaining reliable valuation estimates requires attention to theoretical and econometric issues that are often quite subtle. Volume 2 of the Handbook of Environmental Economics presents both the theory and the practice of environmental valuation. It synthesizes the vast literature that has accumulated since the publication of the Handbook of Natural Resource and Energy Economics two decades ago. It includes chapters on individual valuation methods written by researchers responsible for fundamental advances in those methods. It also includes cross-cutting chapters that deal with aspects of welfare theory, uncertainty, experimental methods, and public health that are pertinent to valuation. Throughout the volume, attention is paid to research and policy issues that arise not only in high-income countries, where most of the

theory and econometrics that underlie applied valuation methods have been developed, but also in poorer parts of the world. The volume provides a state-of-the-art reference for scholars and practitioners alike.

A User's Guide to Community Entry for the Severely Handicapped Feb 24 2021 Once "warehoused" in institutions, many severely handicapped individuals are now living in community residences. Yet there are few resource materials available for those who face the difficult task of planning and operating these residences. A User's Guide to Community Entry for the Severely Handicapped offers practical guidance for creating the most home-like, least restrictive residential settings. Committed to the right of all individuals to live in their home community, Pancsofar and Blackwell address topics of vital concern to residential planners, administrators, and direct care personnel. The Guide covers administrative and programmatic issues, offering a wealth of suggestions, examples, forms, and checklists. It is a valuable special education textbook and reference work, and an excellent resource for families.

Advances in Smart Technologies in Structural Engineering Feb 13 2020 This book collects invited lectures presented and discussed on the AMAS & ECCOMAS

Workshop/Thematic Conference SMART'03. The SMART'03 Conference on Smart Materials and Structures was held in a 19th century palace in Jadwisin near Warsaw, 2-5 September 2003, Poland .It was organized by the Advanced Materials and Structures (AMAS) Centre of Excellence at the Institute of Fundamental Technological Research (IFTR) in Warsaw,ECCOMAS - European Community on Computational Methods in Applied Sciences and SMART-TECH Centre at IFTR. The idea of the workshop was to bring together and consolidate the community of Smart Materials and Structures in Europe. The workshop was attended by 66 participants from n European countries (Austria, Belgium, Finland, France, Germany, Italy, Poland, Portugal, Spain, U.K., Ukraine), 1 participant from Israel and 1 participant from the USA. The workshop program was grouped into the following major topics: 4 sessions on Structural Control (18 presentations), 3 sessions on Vibration Control and Dynamics (14 presentations), 2 sessions on Damage Identification (10 presentations), 2 sessions on Smart Materials (9 presentations). Each session was composed of an invited lecture and some contributed papers. Every paper scheduled in the program was presented, so altogether 51 presentations were given. No sessions were run in parallel. The workshop was attended not only by researchers but also by people closely related to the industry. There were interesting discussions on scientific merits of the presented papers as well as on future development of the field and its possible industrial applications.

ILN RJE User's Guide for PDP-11/RT-11 Hosts Oct 11 2019 The Intra-Laboratory Network (ILN) is a general-purpose computer communications network located at ANL. This network provides error-free high-speed communications between computers connected to the network. In addition to its general-purpose capability, the ILN also provides a remote job entry (RJE) system that allows users to move files from the user's computer system to ANL's Central Computing Facility (CCF), move files from the CCF to the user's computer system, and check on the status of CCF jobs, cancel jobs, etc. This document describes the use of the ILN RJE system for users who have DEC PDP-11 computer systems running the RT-11 operating system. The ILN RJE system consists of three parts. Closest to the user is the ILN RJE utility program that runs on the user's host. Between the host and the CCF is the ILN which contains, in addition to the network control, an ILN RJE facility that supports the utility program and interfaces to the CCF. The third part is the CCF, which is accessed via the CCF front-end Varian V73 communications processors. The procedures for running the ILN RJE utility program are described. Then the commands that can be used to submit and retrieve jobs, check on job status, etc., are reviewed. Each command description includes the command syntax, a brief description of the function, and one or more examples. Next, several techniques for transferring files between a host and either the Central Computing Facility or another host are outlined. Appendixes summarize the ILN RJE system commands, and provide the ASCII/EBCDIC conversion table that is used in the ILN. (RWR).

User's Guide to Natural Gas Technologies Nov 04 2021 Compiled & Edited by F. William Payne. Natural gas technologies that were new five years ago have now been tested in the real world. This book describes some of these important technologies, covering both new engineering concepts and new products which have emerged, as well as important innovations to existing technologies. Many of the chapters include economic analyses which identify the resulting cost savings. Specific areas of development addressed include gas cooling, chillers, desiccant technologies, cogeneration, heating systems, and other natural gas technologies.
