[Un75: Sustainable Engineering in Action](#) Oct 08 2021 This year marks the 75th anniversary of

the founding of the United Nations, and UN75: Sustainable Engineering in Action highlights how engineering and those sectors related to the built environment are tackling the most pressing challenges of the day, as represented by the UN's Sustainable Development Goals. The breadth of projects profiled in this book illustrates the extent of the challenge that the SDGs represent, along with the range of responses to that challenge. From fighting poverty, hunger and inequality; to promoting health, peace, education and economic development; to protecting the environment, the subjects addressed reflect what engineers have always done - take on the world's big problems with solutions large and small. The second in a series of books produced by the Institution of Civil Engineers (ICE) - one of the world's oldest and most respected professional engineering associations, with a global membership of over 90,000 - and publisher Artifice Press,

this book follows the success of previous title *Shaping the World: Two Hundred Years of the Institution of Civil Engineers*. It includes a host of industry experts and prominent international organisations, including the likes of UNESCO, UNICEF, the World Health Organization and WaterAid, to name but a few. Accessible to a broad readership, from industry professionals to those with an interest in the built environment and international development, the result is a publication that presents not only the most significant global goals, but also some of the most innovative and influential long-term means of achieving them.

Environmental Success Stories Jul 17 2022 Unlike many titles on environmental issues that portend a dark future, Environmental Success Stories delves into the most daunting ecological and environmental challenges humankind has faced and shows how scientists, citizens, and a responsive public sector have dealt with them successfully. In addition to presenting the basic chemical and environmental science underlying problems like providing clean drinking water, removing DDT and lead

from agriculture and our homes, and curtailing industrial pollution, this book also discusses the political actors, agency regulators, and community leaders who have collaborated to enact effective legislation. Sharing the stories of the people, organizations, and governments who have addressed these problems successfully, Frank M. Dunnivant explains how we might confront the world's largest and most complex environmental crisis: climate change. Now is the time for rededicated scientific exploration and enlightened citizen action to save our environment, and Dunnivant's book offers a stirring call to action.

**Index to Engineering News for the Years 1890 to 1899 Inclusive (Classic Reprint)**

Sep 07 2021 Excerpt from Index to Engineering News for the Years 1890 to 1899

Inclusive This card index was found so great a convenience in the office that it was determined to make it available to the readers of Engineering News generally by publication in book form. For this purpose the card index was thoroughly revised and all references to minor notes of current news and matter of only temporary importance were eliminated from it. Thus the work was brought within reasonable limits of size, and its usefulness for reference was increased by the fact that the searcher is not misled into looking up articles too brief or unimportant to be worth the trouble. At the same

time the whole mass of references was gone over critically by the editorial staff, nomenclature was systematized, cross-references were added and every endeavor was used to make the work a convenient guide to the working engineer in making reference to his back volumes of Engineering News. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition.
