This 1982 work conceives of historical geography as a field in its own right and as the foundation of a revitalized traditional, empirical human geography. The main argument is that historical enquiry is an independent form of understanding not based upon the approaches of the natural or social sciences. History, Geography and Civics provides an in-depth and engaging introduction to teaching and learning socio-environmental education from F-6 in Australia and New Zealand. It explores the centrality of socio-environmental issues to all aspects of life and education and makes explicit links between pedagogical theories and classroom activities. Part I introduces readers to teaching and learning history, geography and environmental studies, and civics and citizenship, as well as issues in intercultural and global education. Part II explores the use of media and sources, values and attitudes, assessment and creative teaching. Each chapter provides links to the Australian Curriculum, including cross-curriculum priorities: sustainability, Aboriginal and Torres Strait Islander education, and Asia and Australia's engagement with Asia. History, Geography and Civics encourages the reader to consider their own beliefs, values and attitudes in relation to their teaching and includes provocations and reflective questions to foster discussion and engagement. State capitals are an indelible part of the American psyche, spatial representations of state power and national identity. Learning them by heart is a rite of passage in grade school, a pedagogical exercise that emphasizes the importance of committing place-names to memory. But geographers have yet to analyze state capitals in any depth. In American Capitals, Christian Montès takes us on a well-researched journey across America—from Augusta to Sacramento, Albany to Baton Rouge—shedding light along the way on the historical circumstances that led to their appointment, their success or failure, and their evolution over time. While all state capitals have a number of characteristics in common—as symbols of the state, as embodiments of political power and decision making, as public spaces with private interests—Montès does not interpret them through a single lens, in large part because of the differences in their spatial and historical evolutionary patterns. Some have remained small, while others have evolved into bustling metropolises, and Montès explores the dynamics of change and growth. All but eleven state capitals were established in the nineteenth century, thirty-five before 1861, but, rather astonishingly, only eight of the fifty states have maintained their original capitals. Despite their revered status as the most monumental and historical cities in America, capitals come from surprisingly humble beginnings, often plagued by instability, conflict, hostility, and corruption. Montès reminds us of the period in which they came about, “an era of pioneer and idealized territorial vision,” coupled with a still-evolving American citizenry and democracy. This 1897 textbook traces the progress of geographical writing from Homeric times to the end of Rome's western empire. This text has been designed to cover all aspects and phases of the historical geography of England and Wales in a single volume. In its substantially revised and enlarged form, the treatment of standard themes has been completely re-written to take account of recent work and shifts in viewpoint while its overall coverage has been extended to embrace newer themes like symbolic landscapes and the geography of the inter-war period. Its comprehensiveness and freshness of approach ensure its continuing value and success as a text. Breadth of coverage from prehistory to 1939 Uses a range of data sources and approaches Well illustrated with particular emphasis on key themes Major revision of 1st edition with much wider range of topics Georges Benko «Societies are much messier than our theories of them» Michael Mann The Sources of Social Power 1 Towards a unified social theory Why are there communication problems between the different disciplines of the social sciences? And why should there be so much misunderstanding? Most probably because the encounter of several disciplines is in fact the encounter of several different histories, and therefore of several different cultures, each interpreting the other according to the code dictated by its own culture. Inevitably geographers view other disciplines through their own cultural filter, and even a benevolent view remains 'ethnocentric'. It was in order to avoid such ethnocentricity that Fernand Braudel called for more unity among the social sciences in 1958 : «I wish the social sciences . . . would stop discussing their respective differences so much . . . and instead look for common ground . . . on which to reach their first agreement. Personally I would call these ways : quantification, spatial awareness and 'longue duree'». In its place at the center of the social sciences, geography reduces all social reality to its spatial dimensions. Unfortunately, as a discipline, it considers itself all too often to be in a world of its own. There is a need in France for a figure like Vidal de la Blanche who could refocus attention away from issues of time and space, towards space and social reality. Geographic research will only take a step forward once it learns to address the problems facing all the sciences. This monograph gives a comprehensive but in-depth analysis of the territorial development of Croatia and historical processes of significant spatial impact. It covers the millennial time span – from prehistory till the present, through relevant periods, e.g., prehistory, antiquity, Middle Ages, period of Ottoman progression and retreat, Post-Ottoman period of development of the Central European railway network, the period of South Slavic political associations (old and new Yugoslavia), and the post-Yugoslav period of independent Croatia. The book is highly illustrated with maps and figures. It is written by scholars from the region, based on the original research and the vast body of literature. It is one of the only books in English that interprets the overall development of the territory and cultural landscape of Croatia. Its scientific but comprehensive approach makes it of use to scholars, students and anyone interested in historical and geographical processes and features of Croatia and the Balkan region. This book illustrates how literature, history and geographical analysis complement and enrich each other's disciplinary endeavors. The Hun-Lenox Globe, constructed in 1510, contains the Latin phrase 'Hic sunt dracones' ('Here be dragons'), warning sailors of the dangers of drifting into uncharted waters. Nearly half a millennium earlier, the practice of 'earth-writing' (geographia) emerged from the cloisters of the great library of Alexandria, as a discipline blending the twin pursuits of Strabo's poetic impression of places, and Herodotus' chronicles of events and cultures. Eratosthenes, a librarian at Alexandria, and the mathematician Ptolemy employed geometry as another language with which to pursue 'earth-writing'. From this ancient, East Mediterranean fount, the streams of literary perception, historical record and geographical analysis (phenomenological and Euclidean) found confluence. The aim of this collection is to recover such means and seek the fount of such rich waters, by exploring relations between historical geography, geographic information science (GIS) / geoscience, and textual analysis. The book discusses and illustrates current case studies, trends and discourses in European, American and Asian spheres, where historical geography is practiced in concert with human and physical applications of GIS (and the broader geosciences) and the analysis of text - broadly conceived as archival, literary, historical, cultural, climatic, scientific, digital, cinematic and media. Time as a multi-scaled concept (again, broadly conceived) is the pivot around which the interdisciplinary contributions to this volume revolve. In The Landscape of Time (2002) the historian John Lewis Gaddis posits: “What if we were to think of history as a kind of mapping?” He links the ancient practice of mapmaking with the three-part conception of time (past, present, and future). Gaddis presents the practices of cartography and historical narrative as attempts to manage infinitely complex subjects by imposing abstract grids to frame the phenomena being examined— longitude and latitude to frame landscapes and, occidental and oriental temporal scales to frame timescapes. Gaddis contends that if the past is a landscape and history is the way we represent it, then it follows that pattern recognition constitutes a primary form of human perception, one that can be parsed empirically, statistically and phenomenologically. In turn, this volume reasons that literary, historical, cartographical, scientific, mathematical, and counterfactual narratives create their own spatio-temporal frames of reference. Confluences between the poetic and the positivistic; the empirical and the impressionistic; the epic and the episodic; and the chronologic and the chorologic, can be identified and studied by integrating practices in historical geography, GIScience / geoscience and textual analysis. As a result, new perceptions and insights, facilitating further avenues of scholarship into uncharted waters emerge. The various ways in which geographical, historical and textual perspectives are hermeneutically woven together in this volume illuminates the different methods with which to explore terrae incognitae of knowledge beyond the shores of their own separate disciplinary islands. This volume provides an accessible scientific introduction to the historical geography of Tropical Pacific Islands, assessing the environmental and cultural changes they have undergone and how they are affected currently by these shifts and alterations. The book emphasizes the roles of plants, animals, people, and the environment in shaping the tropical Pacific through a cross-disciplinary approach involving history, geography, biology, environmental science, and anthropology. With these diverse scientific perspectives, the eight chapters of the book provide a comprehensive overview of Tropical Pacific Islands from their initial colonization by native peoples to their occupation by colonial powers, and the contemporary changes that have affected the natural history and social fabric of these islands. The Tropical Pacific Islands are introduced by a description of their geological formation, development, and geography. From there, the book details the origins of the island's original peoples and the dawn of the political economy of these islands, including the domestication and trade of plants, animals, and other natural resources. Next, readers will learn about the impact of missionaries on Pacific Islands, and the affects of World War II and nuclear testing on natural resources and the health of its people. The final chapter discusses the islands in the context of natural resource extraction, population increases, and global climate change. Working together these factors are shown to affect rainfall and limited water resources, as well as the ability to sustain traditional crops, and the capacity of the islands to accommodate its residents. This set of twelve previously unpublished essays on historical geography written by Darby in the 1960s explains the basis of his ideas. The essays are divided into three quartets of studies relating to England, France and the United States. The period from the fifth century to the eighth century witnessed massive political, social and religious change in Europe. Geographical and historical thought, long rooted to Roman ideologies, had to adopt the new perspectives of late antiquity. In the light of expanding Christianity and the evolution of successor kingdoms in the West, new historical discourses emerged which were seminal in the development of medieval historiography. Taking their lead from Orosius in the early fifth century, Latin historians turned increasingly to geographical description, as well as historical narrative, to examine the world around them. This book explores the interdependence of geographical and historical modes of expression in four of the most important writers of the period: Orosius, Jordanes, Isidore of Seville and the Venerable Bede. It offers important readings of each by arguing that the long geographical passages with which they were introduced were central to their authors' historical assumptions and arguments. Alan Baker

considers locational geographies and spatial histories, environmental geographies and environmental histories, landscape geographies and landscape histories, and regional geographies and regional histories. Seeking to bridge the "Great Divide" between history and geography, Baker identifies basic principles relating historical geography not only to history but also to geography, a reworking which signifies a "new beginning" for this scholarly hybrid. Historical geography has been a major area of activity in recent years. Much of the recent work and research findings have been extremely valuable to historians and archaeologists and as background to the study of contemporary geography. This reissue, first published in 1987, presents an overview of contemporary developments in all the major branches of the discipline. As such it provides a valuable introduction to the subject, a review of the latest state of the art and a pointer to future research directions. 'Ian Morris has established himself as a leader in making big history interesting and understandable' Jared Diamond, author of *Guns, Germs and Steel* 'Morris succeeds triumphantly at cramming 10,000 years of history into a single book' Robert Colvile, *The Times* For hundreds of years, Britannia ruled the waves and an empire on which the sun never set - but for thousands of years before that, Britain had been no more than a cluster of unimportant islands off Europe's north-west shore. Drawing on the latest archaeological and historical evidence, Ian Morris shows how much the meaning of Britain's geography has changed in the 10,000 years since rising seas began separating the Isles from the Continent, and how these changing meanings have determined Britons' destinies. From being merely Europe's fractious, feuding periphery - divided by customs, language and landscape, and always at the mercy of more powerful continental neighbours - the British turned themselves into a United Kingdom and put it at the centre of global politics, commerce and culture. But as power and wealth now shift from the West towards China, what fate awaits Britain in the twenty-first century? Extreme weather events, such as droughts, strong winds and storms, flash floods and extreme heat and cold, are among the most destructive yet fascinating aspects of climate variability. Historical records and memories charting the impacts and responses to such events are a crucial component of any research that seeks to understand the nature of events that might take place in the future. Yet all such events need to be situated for their implications to be understood. This book is the first to explore the cultural contingency of extreme and unusual weather events and the ways in which they are recalled, recorded or forgotten. It illustrates how geographical context, particular physical conditions, an area's social and economic activities and embedded cultural knowledges and infrastructures all affect community experiences of and responses to unusual weather. Contributions refer to varied methods of remembering and recording weather and how these act to curate, recycle and transmit extreme events across generations and into the future. With international case studies, from both land and sea, the book explores how and why particular weather events become inscribed into the fabric of communities and contribute to community change in different historical and cultural contexts. This is valuable reading for students and researchers interested in historical and cultural geography, environmental anthropology and environmental studies. In this 1994 book, Xavier de Planhol and Paul Claval, two of France's leading scholars in the field, trace the historical geography of their country from its roots in the Roman province of Gaul to the 1990s. They demonstrate how, for centuries, France was little more than an ideological concept, despite its natural physical boundaries and long territorial history. They examine the relatively late development of a more complex territorial geography, involving political, religious, cultural, agricultural and industrial unities and diversities. The conclusion reached is that only in the twentieth century had France achieved a profound territorial unity and only now are the fragmentations of the past being overwritten. This interdisciplinary 1984 volume extends the debate about the purpose and practice of historical geography. This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant. Hailed as a breakthrough in the understanding of human evolution, *The History and Geography of Human Genes* offers the first full-scale reconstruction of where human populations originated and the paths by which they spread throughout the world. By mapping the worldwide geographic distribution of genes for over 110 traits in over 1800 primarily aboriginal populations, the authors charted migrations and devised a clock by which to date evolutionary history. This monumental work is now available in a more affordable paperback edition without the myriad illustrations and maps, but containing the full text and partial appendices of the authors' pathbreaking endeavor. 'Human Geography' examines the major trends, debates, research and conceptual evolution of human geography during the twentieth century. Considering each of the subject's primary subfields in turn, it addresses developments in both continental European and Anglo-American geography, providing a cutting-edge evaluation of each. Written clearly and accessibly by leading researchers, the book combines historical astuteness with personal insights and draws on a range of theoretical positions. A central theme of the book is the relative decline of the traditional subdisciplines towards the end of the twentieth century, and the continuing movement towards interdisciplinarity in which the various strands of human geography are seen as inextricably linked. This stimulating and exciting new book provides a unique insight into the study of geography during the twentieth century, and is essential reading for anyone studying the history and philosophy of the subject. An accessible, definitive student introduction to geographical thought, this book takes a unique approach that encompasses environmental, historical and social perspectives. Now in its fifth edition, it includes new case studies, and revisions and updates throughout, with additional chapters expanding coverage of global subjects, poststructuralism, and the future of geography. This text explores complex ideas in an intelligible and accessible style. Illustrated throughout with research examples and explanations in text boxes, questions for discussion at the end of each chapter and a concept glossary, this is the essential student companion to the discipline. This book explores the multiple histories of critical geography as it developed in 14 different locations around the globe, whilst bringing together a range of approaches in critical geography. It is the first attempt to provide a comprehensive account of a wide variety of historical geographies of critical geography from around the world. Accordingly, the chapters provide accounts of the development of critical approaches in geography from beyond the hegemonic Anglo-American metropolises. Bringing together geographers from a wide range of regional and intellectual milieus, this volume provides a critical overview that is international and illustrates the interactions (or lack thereof) between different critical geographers, working across a range of spaces. The chapters provide a more nuanced history of critical geography, suggesting that while there were sometimes strong connections with Anglo-American critical geography, there were also deeply independent developments that were part of the construction of very different kinds of critical geography in different parts of the world. *Placing Critical Geographies* provides an excellent companion to existing histories of critical geography and will be important reading for researchers as well as undergraduate and graduate students of the history and philosophy of geography. This book offers a unique contribution to the burgeoning field of Chinese historical geography. Urban transformation in China constitutes both a domestic revolution and a world-historical event. Through the exploration of nine urban sites of momentous change, over an extended period of time, this book connects the past with the present, and provides much-needed literature on city growth and how they became complex laboratories of prosperity. The first part of this book puts Chinese urban changes into historical perspective, and probes the relationship between nation and city, focusing on Shanghai, Beijing and Changchun. Part two deals with the relationship between history and modernity, concentrating on Tunxi, a traditional trade center of tea, New Villages in Shanghai and street names in Taipei and Shanghai. Part three showcases the complexities of urban regeneration vis-à-vis heritage preservation in cities such as Datong, Tianjin and Qingdao. This book offers an innovative interdisciplinary and international perspective, which will be of interest to students and scholars of Chinese urban studies, as well Chinese politics and society. Could you be related to a blonde Lithuanian? Did you know that India is the only country that has both lions and tigers? Who found out how tall Mt Everest is? If you've ever wanted to know the answers to questions like these, this is the book for you. In here you will find various things you never expected, such as the fact that we still greet each other like the Harappans did and that people used to think India was full of one-eyed giants. And, sneakily, you'll also know more about India's history and geography by the end of it. Full of quirky pictures and crazy trivia, this book takes you on a fantastic journey through the incredible history of India's geography. A study of the school textbook grounded in historical and comparative perspectives. The approach is broadly chronological, revealing changes in the theory and practice of textbook production and use. The book focuses largely on three associated subjects - geography, history and social studies. This book makes indicators more accessible, in terms of what they are, who created them and how they are used. It examines the subjectivity and human frailty behind these quintessentially 'hard' and technical measures of the world. To achieve this goal, *The Rise and Rise of Indicators* presents the world in terms of a selected set of indicators. The emphasis is upon the origins of the indicators and the motivation behind their creation and evolution. The ideas and assumptions behind the indicators are made transparent to demonstrate how changes to them can dramatically alter the ranking of countries that emerge. They are, after all, human constructs and thus embody human biases. The book concludes by examining the future of indicators and the author sets out some possible trajectories, including the growing emphasis on indicators as important tools in the Sustainable Development Goals that have been set for the world up until 2030. This is a valuable resource for undergraduate and postgraduate students in the areas of economics, sociology, geography, environmental studies, development studies, area studies, business studies, politics and international relations. *Geography of Claudius Ptolemy*, originally titled *Geographia* and written in the second century, is a depiction of the geography of the Roman Empire at the time. Though inaccurate due to Ptolemy's varying methods of measurement and use of outdated data, *Geography of Claudius Ptolemy* is nonetheless an excellent example of ancient geographical study and scientific method. This edition contains more than 40 maps and illustrations, reproduced based on Ptolemy's original manuscript. It remains a fascinating read for students of scientific history and Greek influence. CLAUDIUS PTOLEMY (A.D. 90- A.D. 168) was a poet, mathematician, astronomer, astrologer, and geographer who wrote in Greek, though he was a Roman citizen. He is most well-known for three scientific treatises he wrote on astronomy, astrology, and geography, respectively titled *Almagest*, *Apotelesmatika*, and *Geographia*. His work influenced early Islamic and European studies, which in turn influenced much of the modern world. Ptolemy died in Alexandria as a member of Greek society. This now standard student reference has been totally revised and updated. It remains the definitive introduction to the history, philosophy, and methodology of human geography. The book is organized into five sections: An historical overview of the discipline and an explanation of its organization; with more on the growth of spatial sciences, Geographical Information Systems, and ways of representing the world An examination of geography from Antiquity to the early modern period An analysis of paradigm shifts in geography, the philosophy of science, and the quantitative revolution; A critical discussion of positivism, empiricism, structuration theory, realism; as well as an introduction to core themes and concepts in current geographical thought including space, place, and post-modernism A review of global processes and local responses, from economic globalization to global environmental change This book contains a collection of studies in *Historical Geography and Biblical Historiography*. It is presented to Professor Zecharia Kallai, one of the leading scholars of *Historical Geography of the Bible* and is concluded with a list of his publications. *Key Concepts in Historical Geography* forms part of an innovative set of companion texts for the Human Geography sub-disciplines. Organized around 24 short essays, it provides a cutting edge introduction to the central concepts that define contemporary research in Historical Geography. Involving detailed and expansive discussions, the book includes: An introductory chapter providing a succinct overview of the recent developments in the field 24 key concepts entries with comprehensive explanations, definitions and evolutions of the subject Extensive pedagogic features that enhance understanding including a glossary, figures, diagrams and further reading *Key Concepts in Historical Geography* is an ideal companion text for upper-level undergraduate and postgraduate students and covers the expected staples from the discipline - from people, space and place to colonialism and geopolitics - in an accessible style. Written by an internationally recognized set of authors, it is an essential addition to any geography student's library. The *SAGE Handbook of Historical Geography* provides an international and in-depth overview of the field with chapters that examine the history, present condition and future significance of historical geography in relation to recent developments and current research. *Student Book + ebook/assess Oxford Big Ideas Geography | History Australian Curriculum* provides complete coverage of Australian Curriculum: Geography and Australian Curriculum: History across Years 7 to 10. Each level is packaged in a way that: supports the full delivery of all course content within the

available class time enables teachers to adopt a semesterised approach or deliver discrete year-long courses provides interim Civics & Citizenship and Commerce units for schools (in digital format only), until final ACARA syllabus is released. The ebook is a cloud-based web-book available anywhere, anytime, on any device, navigated by topic or by 'page view'. assess is an indispensable online assessment tool, explicitly mapped to the Australian Curriculum that drives student progress through tailored instruction. As well as containing the student text and study tools, this ebook offers virtual case studies including interactive maps and timelines, videos and other interactives. For all related titles in this series, please click here This volume examines geopolitics by looking at the interaction between geography, strategy and history. This book addresses three interrelated questions: why does the geographical scope of political objectives and subsequent strategy of states change? How do these changes occur? Over what period of time do these changes occur? The theories of Sir Halford Mackinder and Nicholas Spykman are examined in order to provide an analytical narrative for five case studies, four historical and one contemporary. Taken together they offer the prospect of converting descriptions of historical change into analytic explanations, thereby highlighting the importance of a number of commonly overlooked variables. In addition, the case studies will illuminate the challenges that states face when attempting to change the scope of their foreign policy and geo-strategy in response to shifts in the geopolitical reality. This book breaks new ground in seeking to provide a way to understand why and how the geographical scope of political objectives and subsequent strategy both expands and contracts. This book will be of much interest to students of geopolitics, strategic studies, military history, and international relations. Table of contents
