On April 12, 1945, Franklin Roosevelt died and Harry Truman took his place in the White House. Historians have been arguing ever since about the implications of this transition for American foreign policy in general and relations with the Soviet Union in particular. Was there essential continuity in policy or did Truman's arrival in the Oval Office prompt a

sharp reversal away from the approach of his illustrious predecessor? This study explores this controversial issue and in the process casts important light on the outbreak of the Cold War. From Roosevelt to Truman investigates Truman's foreign policy background and examines the legacy that FDR bequeathed to him. After Potsdam and the American use of the atomic bomb, both of which occurred under Truman's presidency, the US floundered between collaboration and confrontation with the Soviets, which represents a turning point in the transformation of American foreign policy. This work reveals that the real departure in American policy came only after the Truman administration had exhausted the legitimate possibilities of the Rooseveltian approach of collaboration with the Soviet Union. During the summer of 1945, World War II was still raging. Japan refused to surrender. Many US officials thought the best solution to save lives and end the war early was to drop an atomic bomb on Japan. Others disagreed. *The US Decision to Drop the Atomic Bomb* explores the perspectives of those who were involved in the decision to drop the bombs. Easy-to-read text, vivid images, and helpful back matter give readers a clear look at this subject. Features include a table of contents, infographics, a glossary, additional resources, and an index. Aligned to Common Core Standards and correlated to state standards. Core Library is an imprint of Abdo Publishing, a division of ABDO. A dystopian tale about mass-

entertainment-turned-toxic from the award-winning author of *Towing Jehovah*—perfect for Philip K. Dick fans. Cutting-edge virtual reality has emerged as a popular, albeit controversial, source of amusement. Devouring a cephalopod or “dreambean” allows the eater to become the primary player in a preprogrammed narrative: love story, historical spectacle, horror thriller—this medium encompasses all genres. Our protagonist, Quinjin, is a professional dreambean critic, rating the hallucinogenic adventures hidden within these remarkable fruits. But something has gone terribly wrong. An anonymous “dreamweaver” has created a cephalopod that, by transporting its users to the core of an inescapable nightmare, drives them stark raving mad—just the sort of ammunition the anti-dreambean movement needs to get the technology banned. Quinjin is hired to find the source of the poison and eradicate it. But the reviewer’s heroic quest becomes highly personal when the person he most cares about—his teenage daughter—eats the forbidden fruit and lapses into a coma. Dark and satiric, *The Continent of Lies* is a bravura demonstration of the bold originality that has won James Morrow two Nebula Awards, two World Fantasy Awards, and the Prix Utopia. The atomic bombs dropped on Hiroshima and Nagasaki in August of 1945 unleashed a force as mysterious as it was deadly—radioactivity. In 1946, the United States government created the Atomic Bomb Casualty Commission (ABCC) to serve as a permanent agency in Japan with

the official mission of studying the medical effects of radiation on the survivors. The next ten years saw the ABCC's most intensive research on the genetic effects of radiation, and up until 1974 the ABCC scientists published papers on the effects of radiation on aging, life span, fertility, and disease. *Suffering Made Real* is the first comprehensive history of the ABCC's research on how radiation affected the survivors of the atomic bomb. Arguing that Cold War politics and cultural values fundamentally shaped the work of the ABCC, M. Susan Lindee tells the compelling story of a project that raised disturbing questions about the ethical implications of using human subjects in scientific research. How did the politics of the emerging Cold War affect the scientists' biomedical research and findings? How did the ABCC document and publicly present the effects of radiation? Why did the ABCC refuse to provide medical treatment to the survivors? Through a detailed examination of ABCC policies, archival materials, the minutes of committee meetings, newspaper accounts, and interviews with ABCC scientists, Lindee explores how political and cultural interests were reflected in the day-to-day operations of this controversial research program. Set against a period of conflicting views of nuclear weapons and nuclear power, *Suffering Made Real* follows the course of a politically charged research program and reveals in detail how politics and cultural values can shape the conduct, results, and uses

of science. The picture does not tell the whole story -- Scoop the world -- MacArthur's closed kingdom -- Six survivors -- Some events at Hiroshima -- Detonation -- Aftermath. "James B. Conant was a towering figure who stood at the center of the great crises and challenges of the twentieth century. He set an extraordinary example of public service without ever holding elected office. A member of the greatest generation, there was probably no one who made a larger mark in more areas of American life, shaping national policy as a scientist, nuclear pioneer, Cold War statesman, diplomat, and educational reformer for nearly fifty years. As a brilliant young chemist, he supervised the production of poison gas in WWI. As the Nazi threat loomed, he boldly led the interventionist cause in WWII and was tapped by President Franklin D. Roosevelt to be one of the scientific chiefs at the helm of the Manhattan Project, personally overseeing the massive secret effort to develop the atomic bomb and making the fateful recommendation to drop it on Hiroshima to bring the war to a quick and decisive end. He went on to become one of America's first cold warriors, led the bitter fight to reject the hydrogen bomb, and campaigned tirelessly for the international control of atomic weapons. He continued to exert his influence as President Eisenhower's high commissioner, and then ambassador, to Germany, helping to secure the country's future and strengthen Europe's defenses against Soviet aggression. He achieved national prominence in his twenty-

year reign as president of Harvard--the very symbol of the intellectual and social elite--and yet was a champion of meritocracy and open admissions, helping to create the SAT and devoting his later life to improving public schools as the "engine of democracy." Even as he worked to safeguard the American way of life, he feared the nuclear force he helped harness was so dangerous it could lead to the extinction of mankind. In this intimate account of his extraordinary life, his granddaughter, ... bestselling author Jennet Conant, draws on hundreds of documents, diaries, and letters to reveal the agonizing decisions he was forced to make while serving his country in three wars--two hot, and one cold--and the burden of guilt he bore for his actions and for always putting duty before everything else. For all his brilliance, he never understood the depression that ravaged his family but struggled to keep his wife from succumbing, in the process alienating both his sons. With *Man of the Hour*, Jennet Conant paints a rich, nuanced portrait of a great American leader and visionary, the last of a vanishing breed."--Jacket. James B. Conant (1893-1978) was one of the titans of mid-20th-century American history, attaining prominence and power in multiple fields. Usually remembered as an educational leader, he was president of Harvard University for two tumultuous decades, from the Depression to World War II to the Cold War and McCarthyism. To take that job he gave up a scientific career as one of the country's top

chemists, and he left it twenty years later to become Eisenhower's top diplomat in postwar Germany. Hershberg's prize-winning study, however, examines a critical aspect of Conant's life that was long obscured by government secrecy: his pivotal role in the birth of the nuclear age. During World War II, as an advisor to Roosevelt and then Truman (on the elite "Interim Committee" that considered how to employ the bomb against Japan), Conant was intimately involved in the decisions to build and use the atomic bomb. During and after the Manhattan Project, he also led efforts to prevent a postwar nuclear arms race between the United States and the Soviet Union that, he feared, threatened the survival of civilization — an apocalyptic prospect he glimpsed in the first instant of the new age, when he witnessed the first test of the new weapon at Alamogordo on July 16, 1945. "... a vivid inquiry... a model of historiography; evocative reading...[Conant was] central to atomic policy and progress; the bomb would be as much Conant's as it was anyone's in Government. His inner response to that burden responsibility has long been obscured, but it is illumined here." — Philip Morrison, *The New York Times Book Review* "In his splendid portrait of Conant, James Hershberg has illuminated the life of a pivotal figure in the making of U.S. nuclear, scientific, educational and foreign policy for almost a half-century. But the book is much more: It is not only an insightful narration of Conant's life; it is also a brilliant and important account of the

making of the nuclear age, a chronicle that contains much that is new... Hershberg's superb study... is a chronicle of Conant's moral journey and we are the wiser for his having charted Conant's path." — S.S. Schweber, *Washington Post Book World* "James G. Hershberg ably comes to grips with Conant and his hazardous times... His book is vibrantly written and compelling, and it breaches Conant's shield of public discretion in masterly fashion, making extensive use of unpublished interviews, diaries, reports, and correspondence pried from private and governmental repositories. It is a huge, ambitious work — a history of the Cold War as Conant encountered it as well as a study of the man." — Daniel J. Kevles, *The New Yorker* "... a well-written, comprehensive, nonjudgmental but sensitive biography... Conant was involved in so many and such critical events that students of almost any aspect of our public life over the past half-century will find useful the new material and helpful insights in this book... This fine biography of one of the most important and complicated of America's twentieth-century leaders immediately establishes James Hershberg as one of America's outstanding young historians." — Stephen E. Ambrose, *Foreign Affairs* "... magnificent... Any reader interested in nuclear weapons, Cold War history or American politics from FDR to JFK will find this biography riveting." — Priscilla McMillan, *Chicago Tribune* "... masterful... The prose is clear, the

narrative forceful and the author's judgments are balanced and judicious. This is simply splendid biography... The highest praise one can give for a book of this sort is that the historian has not shrunk from speaking truth to power. This book quietly but insistently does so. It should be read by the public at large as one of the definitive texts on the cold war and the nuclear age... Hershberg's triumph is that he has prevailed over all the official lies to give us one more layer of the historical truth." — Kai Bird, *The Nation* "... riveting... an impressive achievement... honest and comprehensive in its scholarship, the author has shown himself to be a historian of notable achievement and promise." — McGeorge Bundy, *Nature* "Hershberg's outstanding, balanced biography lifts the self-imposed secrecy surrounding a key architect of U.S. Cold War policy and of the nuclear age." — *Publisher's Weekly* "... [an] impressive and substantial achievement. [Hershberg] has used the life of one strategically placed individual to illuminate the most important issues surrounding America's role and conduct in the nuclear age. His book will be invaluable to scholars assessing the impact and legacy of the group who acquired the epithet 'wise men' now that the Cold War has receded." — Carol S. Gruber, *Science* "... definitive... a far more textured picture than one finds in Conant's own guarded and unrevealing autobiography... an important and rewarding book... illuminating... Conant led a remarkable and eventful life in remarkable and

eventful times. James Hershberg has explored that life, and those times, in exhaustive and revealing detail.” — Paul Boyer, *The New Republic* “James G. Hershberg has achieved the impossible. He has written a huge biography of a Harvard president that is fascinating, informative and as valuable a piece of American history as anything I have read in years... Mr. Hershberg has brought us back vividly to an age that seems remote, so long ago, but the questions about nuclear proliferation are the same, even while the answers are still ambiguous. As we watch men struggling with unanticipated post-Cold War problems and civil wars sprouting like Jason’s men at arms, it is good to read this story about a complex man who deserves an important place in our history because he helped make that history possible.” — Arnold Beichman, *The Washington Times* “... engrossing... A magisterial study of an awesome and intriguing public career.” — Kirkus Reviews “... entertaining... thought-provocative.” — Dick Teresi, *The Wall Street Journal* “Hershberg’s book helps us more clearly understand the postwar Establishment and offers a challenging appraisal of the role of elites, of universities and of the state.” — Gar Alperovitz, *In These Times* “Hershberg deserves great credit for cracking a tough New England walnut, analyzing this very important public figure, demonstrating how he fit into his own time and showing us what we can learn from the man.” — Daniel R. Mortensen, *The Friday Review of Defense Literature* “... a

compelling account... an engaging examination of one of the central figures of the nuclear age. It succeeds in showing ‘one man’s intersection with great events and issues’ and in the process illuminates those issues for us all.” — *American Historical Review* “... well-written... Conant’s participation in one of our country’s most dynamic periods is, thanks to Hershberg, now much better understood.” — *Library Journal* “A reader of the book will enter the realm of the greats, the shapers of worlds created by the atomic blasts at Hiroshima and Nagasaki... Conant was no bit player in Cold War history... [the book is] very successful in weaving Conant’s subsurface persona in with his ups and downs as a prominent and committed public figure. And it leaves out little detail in describing top-level decisions involving the Cold War geopolitics of nuclear weaponry. Conant was a participant in most of these decisions—with Presidents Roosevelt and Truman themselves, their Secretaries of War and State, and, of course, all the major scientific figures of the time.” — *Chemical & Engineering News* “A wonderfully rich portrait that emerges from a carefully documented account of Conant’s role in the development of the atomic bomb and post-war nuclear policy... An extraordinarily well written text... Hershberg lays bare the person behind the persona — warts, dimples and all.” — Stanley Goldberg, *Bulletin of the Atomic Scientists* Reconstructs the events leading up to the bombing of Hiroshima in 1945. A New York

Times Notable Book: *The People vs. God* in “a funny, ferocious fantasy” from the two-time Nebula Award-winning author (*The Philadelphia Inquirer*). Hallelujah! God is not dead. He’s just been a deep-freeze coma in the Arctic. Strapped for cash, the Vatican has sold the body (a bargain at \$1.3 billion!) to Baptists in Florida. Enterprising souls that they are, they’ve turned the *Corpus Dei* into a popular, two-mile long theme-park attraction at Orlando’s *Celestial City USA*—hooked up to the largest life-support system on earth. Then things get weird. Martin Candle, a justice of the peace who’s suffered a series of devastating setbacks, decides to put Him on trial in The Hague for crimes against humanity. Now, to accumulate evidence for the prosecution, Candle enters God’s brain on a steamer to find out what in the world the Almighty could possibly have been thinking all these years. What ensues in this sequel to James Morrow’s World Fantasy Award-winning *Towing Jehovah* is a “square off for the greatest moral debate of all time . . . [and it’s] not to be missed” (Booklist). “Surreal . . . dark and powerful.” — *Publishers Weekly* “A wildly imaginative novel . . . as barbed with high and low comedy as an Aristophanes play—and just as fundamentally serious” — *The Bloomsbury Review* “Hilarious . . . [Morrow] demonstrates a sharp mind, [and] a sharper tongue . . . Salman Rushdie, eat your heart out.” — *The San Diego Union-Tribune* After thirty years spent eating the brains of overachieving amateur

climbers—who incorrectly believed they could summit Mount Everest—a James Bond-loving yeti decides that his life needs a touch more spirituality. But can an abominable monster truly change? Thus begins an improbable journey overseen by the true Dalai Lama himself, an adventure of attempted enlightenment, dietary restriction, unlikely friendship, and political intrigue. Bigfoot and the Bodhisattva is award-winning author James Morrow (Towing Jehovah, Shambling Towards Hiroshima) at his best: witty, incisive, and nonpareil. City Maps Hiroshima Japan is an easy to use small pocket book filled with all you need for your stay in the big city. Attractions, pubs, bars, restaurants, museums, convenience stores, clothing stores, shopping centers, marketplaces, police, emergency facilities are only some of the places you will find in this map. This collection of maps is up to date with the latest developments of the city as of 2017. We hope you let this map be part of yet another fun Hiroshima adventure :) Marigold presents the first rigorously documented, in-depth story of one of the Vietnam War's last great mysteries: the secret peace initiative, codenamed "Marigold," that sought to end the war in 1966. The initiative failed, the war dragged on for another seven years, and this episode sank into history as an unresolved controversy. Antiwar critics claimed President Johnson had bungled (or, worse, deliberately sabotaged) a breakthrough by bombing Hanoi on the eve of a planned secret U.S.-North

Vietnamese encounter in Poland. Yet, LBJ and top aides angrily insisted that Poland never had authority to arrange direct talks and Hanoi was not ready to negotiate. This book uses new evidence from long hidden communist sources to show that, in fact, Poland was authorized by Hanoi to open direct contacts and that Hanoi had committed to entering talks with Washington. It reveals LBJ's personal role in bombing Hanoi as he utterly disregarded the pleas of both the Polish and his own senior advisors. The historical implications of missing this opportunity are immense: Marigold might have ended the war years earlier, saving thousands of lives, and dramatically changed U.S. political history. In 1987, the New York Times published their first front-page review of a science fiction anthology for a collection called *In the Field of Fire*, themed around the war in Vietnam. "Vietnam was science fiction," the reviewer wrote, and writing about it through that lens found meaning in a war few understood. This idea, that speculative fiction is a vital tool to understanding the inexplicable, is just as relevant nearly thirty years later. *Deserts of Fire* is a war-inspired anthology for the new millennium, because for many, the recent wars in the deserts of Iraq, Afghanistan, and the Middle East are just as slippery to grasp and difficult to understand as Vietnam was two generations earlier. Inside *Deserts of Fire* are stories from a variety of bestselling and award-winning authors that start with the simple and modest ambition of making the

reader feel strange about the recent past. Because when there are too many explanations, the truth won't be found by merely choosing one side or the other. But rather, the truth is in the existence of the confusion itself. Skyhorse Publishing, under our Night Shade and Talos imprints, is proud to publish a broad range of titles for readers interested in science fiction (space opera, time travel, hard SF, alien invasion, near-future dystopia), fantasy (grimdark, sword and sorcery, contemporary urban fantasy, steampunk, alternative history), and horror (zombies, vampires, and the occult and supernatural), and much more. While not every title we publish becomes a New York Times bestseller, a national bestseller, or a Hugo or Nebula award-winner, we are committed to publishing quality books from a diverse group of authors. The award-winning, irreverent, and darkly funny trilogy from "the most provocative satiric voice in science fiction" (The Washington Post). The complete *Godhead Trilogy* from James Morrow, including *Towing Jehovah*, *Blameless in Abaddon*, and *The Eternal Footman*. In the World Fantasy Award-winning *Towing Jehovah*, God is dead, and Anthony Van Horne must tow the corpse to the Arctic (to preserve Him from sharks and decomposition). En route Van Horne must also contend with ecological guilt, a militant girlfriend, sabotage both natural and spiritual, and greedy hucksters of oil, condoms, and doubtful ideas. *Blameless in Abaddon*, a New York Times Notable Book of the Year, is "funny,

ferocious fantasy" (Philadelphia Inquirer). God is a comatose, two-mile-long tourist attraction at a Florida theme park—until a conniving judge decides to put Him on trial in The Hague for crimes against humanity. The Eternal Footman completes Morrow's darkly comic trilogy about God's untimely demise. With God's skull in orbit, competing with the moon, a plague of "death awareness" spreads across the Western hemisphere. As the United States sinks into apocalypse, two people fight to preserve life and sanity. A few highlights: a bloody battle on a New Jersey golf course between Jews and anti-Semites; a theater troupe's stirring dramatization of the Gilgamesh epic; and a debate between Martin Luther and Erasmus. Morrow also gives us his most chilling villain ever: Dr. Adrian Lucido, founder of a new pagan church in Mexico and inventor of a cure worse than any disease. It is the early summer of 1945, and war reigns in the Pacific Rim with no end in sight. Back in the States, Hollywood B-movie star Syms Thorley lives in a very different world, starring as the Frankenstein-esque Corpuscula, and Kha-Ton-Ra, the living Mummy. But the U.S. Navy has a new role waiting for Thorley, the role of a lifetime. The top secret Knickerbocker Project is putting the finishing touches on the ultimate biological weapon: a breed of gigantic, fire-breathing, proto-Godzillas engineered to stomp and burn cities on the Japanese mainland. The Navy calls upon Thorley to don a rubber suit and become the merciless Gorgantis, starring in a film that

simulates the destruction of a miniature Japanese metropolis. If the demonstration succeeds, the Japanese will surrender and many thousands of lives will be spared; if it fails, the horrible mutant lizards must be unleashed. One thing is certain: Syms Thorley must now give the most terrifyingly convincing performance of his life. Short fiction of biblical proportions—and bent—from the science fiction satirist and author of The Godhead Trilogy. James Morrow, "the most provocative satiric voice in science fiction," unabashedly delves into matters both sacred and secular in this collection of short stories buoyed by his deliciously irreverent wit (The Washington Post). Among the dozen selections is the Nebula Award-winning story, "The Deluge," in which a woman of ill repute is rescued by the crew of the ark, who must deal with the consequences of their misguided act of mercy. Also included is a follow-up to the Tower of Babel fable, an unprecedented nativity, and an attempt to stand so-called creation science on its head. Nothing is spared in a collection that "deliciously skewer[s] not only Judeo-Christian mythology but other sacred cows of modern society, from capitalism to New Age spiritualism" (Booklist). "Morrow's is a blend of parody and commentary which challenges readers to reflect upon the human spiritual condition." —Midwest Book Review Explore Hiroshima, and with eyewitness accounts and commentary, learn about the differing viewpoints surrounding the event. Hiroshima

claims a crucial yet neglected place in the psychic terrain of our individual and collective memories. Drawing on recent work in depth psychology and Jungian thought, this study explores the ancient art of remembering by envisioning "places" and "images" that are impressed upon the memory. Enthusiastically used by ancient, medieval, and Renaissance explorers of soul and spirit, the art of memory became a profound expression of striving for cultural reform and an end to religious cruelty. Imaginal Memory and the Place of Hiroshima shows that images arising from the place of Hiroshima reveal, with stark exactitude, the psychic situation of our world. Specific images are explored that embody unsuspected psychological values beyond their role as reminders of the concrete horror of nuclear war. The process of remembering these images deepens into a commemoration of the fundamental powers at work in the psyche—powers that are critical to the development of a sustained cultural commitment to peace and to the deepening and revitalizing of contemporary psychological life. On August 6, 1945, Hiroshima was destroyed by the first atom bomb ever dropped on a city. This book, John Hersey's journalistic masterpiece, tells what happened on that day. Told through the memories of survivors, this timeless, powerful and compassionate document has become a classic "that stirs the conscience of humanity" (The New York Times). Almost four decades after the original

publication of this celebrated book, John Hersey went back to Hiroshima in search of the people whose stories he had told. His account of what he discovered about them is now the eloquent and moving final chapter of *Hiroshima*. Drawing on the voices of atomic bomb survivors and the new science of forensic archaeology, Charles Pellegrino describes the events and the aftermath of two days in August when nuclear devices, detonated over Japan, changed life on Earth forever. *To Hell and Back* offers readers a stunning, “you are there” time capsule, wrapped in elegant prose. Charles Pellegrino’s scientific authority and close relationship with the A-bomb survivors make his account the most gripping and authoritative ever written. At the narrative’s core are eyewitness accounts of those who experienced the atomic explosions firsthand—the Japanese civilians on the ground. As the first city targeted, Hiroshima is the focus of most histories. Pellegrino gives equal weight to the bombing of Nagasaki, symbolized by the thirty people who are known to have fled Hiroshima for Nagasaki—where they arrived just in time to survive the second bomb. One of them, Tsutomu Yamaguchi, is the only person who experienced the full effects of both cataclysms within Ground Zero. The second time, the blast effects were diverted around the stairwell behind which Yamaguchi’s office conference was convened—placing him and few others in a shock cocoon that offered protection while the entire building disappeared around them. Pellegrino weaves spellbinding stories

together within an illustrated narrative that challenges the “official report,” showing exactly what happened in Hiroshima and Nagasaki—and why. Also available from compatible vendors is an enhanced e-book version containing never-before-seen video clips of the survivors, their descendants, and the cities as they are today. Filmed by the author during his research in Japan, these 18 videos are placed throughout the text, taking readers beyond the page and offering an eye-opening and personal way to understand how the effects of the atomic bombs are still felt 70 years after detonation. “*Black Snow* brilliantly vivifies the horrific reality of the most destructive air attack in history, against Tokyo on the night of March 9-10, 1945. James Scott deftly employs sharply etched portraits of individuals of all stations and nationalities to survey the global, technological, and moral backdrop of the cataclysm, including the searing experiences of Japanese trapped in a gigantic firestorm. This riveting account illuminates an historical moment of profound contemporary relevance.” —Richard B. Frank, author of *Tower of Skulls: A History of the Asia-Pacific War: July 1937-May 1942* Seven minutes past midnight on March 10, 1945, nearly 300 American B-29s thundered into the skies over Tokyo. Their payloads of incendiaries ignited a firestorm that reached up to 2,800 degrees, liquefying asphalt and vaporizing thousands; sixteen square miles of the city were flattened and more than 100,000 men, women,

and children were killed. *Black Snow* is the story of this devastating operation, orchestrated by Major General Curtis LeMay, who famously remarked: “If we lose the war, we’ll be tried as war criminals.” James M. Scott reconstructs in granular detail that horrific night, and describes the development of the B-29, the capture of the Marianas for use as airfields, and the change in strategy from high-altitude daylight “precision” bombing to low-altitude nighttime incendiary bombing. Most importantly, the raid represented a significant moral shift for America, marking the first time commanders deliberately targeted civilians which helped pave the way for the atomic bombing of Hiroshima and Nagasaki five months later. Drawing on first-person interviews with American pilots and bombardiers and Japanese survivors, air force archives, and oral histories never before published in English, Scott delivers a harrowing and gripping account, and his most important and compelling work to date. With a new preface by the author Controversial in nature, this book demonstrates that the United States did not need to use the atomic bomb against Japan. Alperovitz criticizes one of the most hotly debated precursory events to the Cold War, an event that was largely responsible for the evolution of post-World War II American politics and culture. An unflinching examination of the moral and professional dilemmas faced by physicians who took part in the Manhattan Project. After his father died, James L. Nolan,

Jr., took possession of a box of private family materials. To his surprise, the small secret archive contained a treasure trove of information about his grandfather's role as a doctor in the Manhattan Project. Dr. Nolan, it turned out, had been a significant figure. A talented ob-gyn radiologist, he cared for the scientists on the project, organized safety and evacuation plans for the Trinity test at Alamogordo, escorted the "Little Boy" bomb from Los Alamos to the Pacific Islands, and was one of the first Americans to enter the irradiated ruins of Hiroshima and Nagasaki. Participation on the project challenged Dr. Nolan's instincts as a healer. He and his medical colleagues were often conflicted, torn between their duty and desire to win the war and their oaths to protect life. Atomic Doctors follows these physicians as they sought to maximize the health and safety of those exposed to nuclear radiation, all the while serving leaders determined to minimize delays and maintain secrecy. Called upon both to guard against the harmful effects of radiation and to downplay its hazards, doctors struggled with the ethics of ending the deadliest of all wars using the most lethal of all weapons. Their work became a very human drama of ideals, co-optation, and complicity. A vital and vivid account of a largely unknown chapter in atomic history, Atomic Doctors is a profound meditation on the moral dilemmas that ordinary people face in extraordinary times. James B. During World War II, as an advisor to Roosevelt and then Truman (on the elite "Interim Committee" that considered how to employ the bomb against Japan), Conant was intimately involved in the decisions to build and use the atomic bomb. During and after the Manhattan Project, he also led efforts to prevent a postwar nuclear arms race between the United States and the Soviet Union that, he feared, threatened the survival of civilization — an apocalyptic prospect he glimpsed in the first instant of the new age, when he witnessed the first test of the new weapon at Alamogordo on July 16, 1945. "... a vivid inquiry... a model of historiography; evocative reading...[Conant was] central to atomic policy and progress; the bomb would be as much Conant's as it was anyone's in Government. His inner response to that burden responsibility has long been obscured, but it is illumined here." — Philip

Morrison, The New York Times Book Review "In his splendid portrait of Conant, James Hershberg has illuminated the life of a pivotal figure in the making of U.S. nuclear, scientific, educational and foreign policy for almost a half-century. But the book is much more: It is not only an insightful narration of Conant's life; it is also a brilliant and important account of the making of the nuclear age, a chronicle that contains much that is new... Hershberg's superb study... is a chronicle of Conant's moral journey and we are the wiser for his having charted Conant's path." — S.S. Schweber, Washington Post Book World "James G. Hershberg ably comes to grips with Conant and his hazardous times... His book is vibrantly written and compelling, and it breaches Conant's shield of public discretion in masterly fashion, making extensive use of unpublished interviews, diaries, reports, and correspondence pried from private and governmental repositories. It is a huge, ambitious work — a history of the Cold War as Conant encountered it as well as a study of the man." — Daniel J. Kevles, The New Yorker "... a well-written, comprehensive, nonjudgmental but sensitive biography... Conant was involved in so many and such critical events that students of almost any aspect of our public life over the past half-century will find useful the new material and helpful insights in this book... This fine biography of one of the most important and complicated of America's twentieth-century leaders immediately

establishes James Hershberg as one of America's outstanding young historians." — Stephen E. Ambrose, *Foreign Affairs* "... magnificent... Any reader interested in nuclear weapons, Cold War history or American politics from FDR to JFK will find this biography riveting." — Priscilla McMillan, *Chicago Tribune* "... masterful... The prose is clear, the narrative forceful and the author's judgments are balanced and judicious. This is simply splendid biography... The highest praise one can give for a book of this sort is that the historian has not shrunk from speaking truth to power. This book quietly but insistently does so. It should be read by the public at large as one of the definitive texts on the cold war and the nuclear age... Hershberg's triumph is that he has prevailed over all the official lies to give us one more layer of the historical truth." — Kai Bird, *The Nation* "... riveting... an impressive achievement... honest and comprehensive in its scholarship, the author has shown himself to be a historian of notable achievement and promise." — McGeorge Bundy, *Nature* "Hershberg's outstanding, balanced biography lifts the self-imposed secrecy surrounding a key architect of U.S. Cold War policy and of the nuclear age." — *Publisher's Weekly* "... [an] impressive and substantial achievement. [Hershberg] has used the life of one strategically placed individual to illuminate the most important issues surrounding America's role and conduct in the nuclear age. His book will be invaluable to scholars assessing the

impact and legacy of the group who acquired the epithet 'wise men' now that the Cold War has receded." — Carol S. Gruber, *Science* "... definitive... a far more textured picture than one finds in Conant's own guarded and unrevealing autobiography... an important and rewarding book... illuminating... Conant led a remarkable and eventful life in remarkable and eventful times. James Hershberg has explored that life, and those times, in exhaustive and revealing detail." — Paul Boyer, *The New Republic* "James G. Hershberg has achieved the impossible. He has written a huge biography of a Harvard president that is fascinating, informative and as valuable a piece of American history as anything I have read in years... Mr. Hershberg has brought us back vividly to an age that seems remote, so long ago, but the questions about nuclear proliferation are the same, even while the answers are still ambiguous. As we watch men struggling with unanticipated post-Cold War problems and civil wars sprouting like Jason's men at arms, it is good to read this story about a complex man who deserves an important place in our history because he helped make that history possible." — Arnold Beichman, *The Washington Times* "... engrossing... A magisterial study of an awesome and intriguing public career." — *Kirkus Reviews* "... entertaining... thought-provocative." — Dick Teresi, *The Wall Street Journal* "Hershberg's book helps us more clearly understand the postwar Establishment and offers a challenging appraisal of the role of

elites, of universities and of the state." — Gar Alperovitz, *In These Times* "Hershberg deserves great credit for cracking a tough New England walnut, analyzing this very important public figure, demonstrating how he fit into his own time and showing us what we can learn from the man." — Daniel R. Mortensen, *The Friday Review of Defense Literature* "... a compelling account... an engaging examination of one of the central figures of the nuclear age. It succeeds in showing 'one man's intersection with great events and issues' and in the process illuminates those issues for us all." — *American Historical Review* "... well-written... Conant's participation in one of our country's most dynamic periods is, thanks to Hershberg, now much better understood." — *Library Journal* "A reader of the book will enter the realm of the greats, the shapers of worlds created by the atomic blasts at Hiroshima and Nagasaki... Conant was no bit player in Cold War history... [the book is] very successful in weaving Conant's subsurface persona in with his ups and downs as a prominent and committed public figure. And it leaves out little detail in describing top-level decisions involving the Cold War geopolitics of nuclear weaponry. Conant was a participant in most of these decisions—with Presidents Roosevelt and Truman themselves, their Secretaries of War and State, and, of course, all the major scientific figures of the time." — *Chemical & Engineering News* "A wonderfully rich portrait that emerges from a carefully documented

account of Conant's role in the development of the atomic bomb and post-war nuclear policy... An extraordinarily well written text...

Hershberg lays bare the person behind the persona — warts, dimples and all.” — Stanley Goldberg, *Bulletin of the Atomic Scientists*

James B. Conant (1893-1978) was one of the giants of the American establishment in the twentieth century. President of Harvard University from 1933 to 1953, he was also a scientist who led the US government's effort to develop weapons of mass destruction, and his story mirrors the transition of the United States from isolationism to global superpower at the dawn of the nuclear age. 'This splendid portrait of Conant ... illuminates the life of a pivotal figure in the making of US nuclear, scientific, educational, and foreign policy for almost half a century. But the book is much more: it is not only an insightful narration of Conant's life, it is also a brilliant and important account of the making of the nuclear age, a chronicle that contains much that is new.' *The Washington Post*

'The bomb would be as much Conant's as it was anyone's in government. His inner response to that burden of responsibility has long been obscured, but it is illumined here ... This is a model of historiography that is evocative reading.' *The New York Times Book Review*

'Vibrantly written and compelling, it breaches Conant's shield of public discretion in masterly fashion ... Do persons exposed to radiation suffer genetic effects that threaten their yet-to-be-born children? Researchers are

concluding that the genetic risks of radiation are less than previously thought. This finding is explored in this volume about the children of atomic bomb survivors in Hiroshima and Nagasaki—the population that can provide the greatest insight into this critical issue. Assembled here for the first time are papers representing more than 40 years of research. These documents reveal key results related to radiation's effects on pregnancy termination, sex ratio, congenital defects, and early mortality of children. Edited by two of the principal architects of the studies, J. V. Neel and W. J. Schull, the volume also offers an important comparison with studies of the genetic effects of radiation on mice. The wealth of technical details will be immediately useful to geneticists and other specialists. Policymakers will be interested in the overall conclusions and discussion of future studies. The shocking and significant story of how the White House and Pentagon scuttled an epic Hollywood production. Soon after atomic bombs exploded over Hiroshima and Nagasaki in 1945, MGM set out to make a movie studio chief Louis B. Mayer called "the most important story" he would ever film: a big budget dramatization of the Manhattan Project and the invention and use of the revolutionary new weapon. Over at Paramount, Hal B. Wallis was ramping up his own film version. His screenwriter: the novelist Ayn Rand, who saw in physicist J. Robert Oppenheimer the model

for a character she was sketching for *Atlas Shrugged*. Greg Mitchell's *The Beginning or the End* chronicles the first efforts of American media and culture to process the Atomic Age. A movie that began as a cautionary tale inspired by atomic scientists aiming to warn the world against a nuclear arms race would be drained of all impact due to revisions and retakes ordered by President Truman and the military—for reasons of propaganda, politics, and petty human vanity (this was Hollywood). Mitchell has found his way into the lofty rooms, from Washington to California, where it happened, unearthing hundreds of letters and dozens of scripts that show how wise intentions were compromised in favor of defending the use of the bomb and the imperatives of postwar politics. As in his acclaimed Cold War true-life thriller *The Tunnels*, he exposes how our implacable American myth-making mechanisms distort our history. This book discusses the decision to use the atomic bomb. Libraries and scholars will find it a necessary adjunct to their other studies by Pulitzer-Prize author Herbert Feis on World War II. The goal of the Princeton Legacy Library is to vastly increase access to

the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905. On the morning of August 6, 1945, the American B-29 Enola Gay released an atomic bomb over the Japanese city of Hiroshima. On August 9 another bomb was dropped on Nagasaki. Fifty years have passed since these catastrophic events, and the bombings still remain highly controversial. The official justification for using these weapons was that they prevented enormous losses on both sides by avoiding an Allied invasion of Japan. Many diplomatic historians, however, have asserted that the bombings were unnecessary. One extreme argument is that Truman knew the Japanese were ready to surrender but wanted to use the bombs to intimidate the Soviet Union. Robert Maddox examines all these claims in *Weapons for Victory* as he strives to dispel the many myths that have been accepted as fact. In addition to Maddox's valuable recasting of the circumstances leading to the bombings, he also confronts the proposed Smithsonian Enola Gay exhibit with careful historical analysis. Join the Abominable Snowman as, determined to transcend his cannibalistic past, he studies Tibetan Buddhism under the Dalai Lama. Pace the walls of Ilium with fair Helen as she tries to convince both sides to abandon their absurd Trojan War. Visit the nursery of Zenobia Garber, born to a Pennsylvania farm couple who accept her for the uncanny little biosphere she is. Scramble aboard the raft built by the

passengers and crew of the sinking Titanic—and don't be surprised when the vessel transmutes into a world even more astonishing than the original Ship of Dreams. Reality by Other Means offers readers the most celebrated results from James Morrow's thirty-five-year career designing fictive thought experiments. Anchored by seven previously uncollected stories, this omnibus ranges from social satire to theological hijinks, steampunk escapades to philosophical antics. On December 26, 1898, Marie Curie announced the discovery of radium and observed that "radioactivity seems to be an atomic property." A mere 47 years later, "Little Boy" exploded over Hiroshima. Before the Fallout is the epic story of the intervening half century, during which an exhilarating quest to unravel the secrets of the material world revealed how to destroy it, and an open, international, scientific adventure transmuted overnight into a wartime sprint for the bomb. Weaving together history, science, and biography, Diana Preston chronicles a human chain reaction of scientists and leaders whose discoveries and decisions forever changed our lives. The early decades of the 20th century brought Einstein's relativity theory, Rutherford's discovery of the atomic nucleus, and Heisenberg's quantum mechanics, and scientists of many nations worked together to tease out the secrets of the atom. Only 12 years before Hiroshima, one leading physicist dismissed the idea of harnessing energy from atoms as "moonshine." Then, on the eve of

World War II, the power of atomic fission was revealed, alliances were broken, friendships sundered, and science co-opted by world events. Preston interviewed the surviving scientists, and she offers new insight into the fateful wartime meeting between Heisenberg and Bohr, along with a fascinating conclusion examining what might have happened had any number of events occurred differently. She also provides a rare portrait of Hiroshima before the blast. As Hiroshima's 60th anniversary approaches, *Before the Fallout* compels us to consider the threats and moral dilemmas we face in our still dangerous world. Samuel S. Kloda spent more than 40 years meeting with the scientists who built the first atomic bombs, and the crews that delivered them to Hiroshima and Nagasaki. Those conversations encouraged him to search archives throughout the U.S. Newly unearthed documents were brought to former members of the Manhattan Project or the 509th Composite Group, who were always willing to autograph and recount the details of these artifacts. Most of the major books on the Manhattan Project were published before 1973. In the years that followed, newly declassified documents became available and showed that many authors had included huge inaccuracies. Richly illustrated with important documents and photographs, Kloda's chronicle of the dawn of the atomic age sets the record straight on one of the greatest scientific advancements of all time. Readers will see how a single letter from Albert Einstein to President Franklin

Roosevelt in 1939 led to the formation of the Advisory Committee on Uranium and, within six years, to the secret Manhattan Project employing more than 100,000 men and women. Children of the Atomic Bomb is Dr. Yamazaki's account of a lifelong effort to understand and document the impact of nuclear explosions on children, particularly the children conceived but not yet born at the time of the explosions. Assigned in 1949 as Physician in Charge of the United States Atomic Bomb Casualty Commission in Nagasaki, Yamazaki had served as a combat surgeon at the Battle of the Bulge where he had been captured and held as a prisoner of war by the Germans. In Japan he was confronted with violence of another dimension - the devastating impact of a nuclear blast and the particularly insidious effects of radiation on children. Yamazaki's story is also one of striking juxtapositions, an account of a Japanese-American's encounter with racism, the story of a man who fought for his country while his parents were interned in a concentration camp in Arkansas. Can civilization survive the untimely demise of God? "A buoyant romp . . . superlatively intelligent and entertaining" (The Baltimore Sun). Completing the World Fantasy Award-winning author's darkly comic trilogy, The Eternal Footman brings us into a future world in which God's skull is in orbit, competing with the moon, and a plague of "death awareness" spreads across the Western hemisphere. As the United States sinks into apocalypse, two people

fight to preserve life and sanity. One is Nora Burkhart, a schoolteacher who will stop at nothing to save her only son, Kevin. The other is the genius sculptor Gerard Korty, who struggles to create a masterwork that will heal the metaphysical wounds of the age. A few highlights: a bloody battle on a New Jersey golf course between Jews and anti-Semites; a theater troupe's stirring dramatization of the Gilgamesh epic; and a debate between Martin Luther and Erasmus. And a chilling villain in the person of Dr. Adrian Lucido—founder of a new pagan church in Mexico, and inventor of a cure worse than any disease . . . "Morrow hilariously joins the ranks of the great satirists." —The Denver Post "[An] insanely ingenious plot, reminiscent, variously, of B-science-fiction movies in the 1950s, Evelyn Waugh's The Loved One, and Terry Southern at his most charmingly deranged." —Kirkus Reviews "Any novel that springs from a sparkling intellect rather than a dreary neurosis is cause for celebration, and The Eternal Footman, with its load of truth and laughter, justifies a considerable quantity of champagne." —Tom Robbins, New York Times—bestselling author of Even Cowgirls Get the Blues PRE-ORDER BOOK 12 OF THE LADYBIRD EXPERT HISTORY OF THE SECOND WORLD WAR, FROM AWARD-WINNING HISTORIAN JAMES HOLLAND Why did Japan decide to attack at Pearl Harbour? What was the Japanese vision of a Greater Asian Co-Prosperty Sphere? How did the

American strategy turn the tide against Japanese offensives? Uncover the complexities of the brutal war against Japan. From the surprise attack on Pearl Harbour, Oahu, to the Phillipines Campaign, the Allies were finally able to turn the tide against the onslaught of Japanese forces. Ending in Japanese surrender after the devastating atomic bombings of Nagasaki and Hiroshima, the war in Japan was eventually won, but at the cost of civilian lives. THE WAR THAT LED TO TWO ATOMIC BOMBINGS Written by historian, author and broadcaster James Holland, Victory Against Japan is an essential introduction to the tactics that finally brought an end to the Second World War. Discover more titles in the Ladybird Expert series: D-Day The Desert War Genetics The Battle of the Nile When President Harry Truman authorized the use of atomic weapons against Japan, he did so to end a bloody war that would have been bloodier still had the planned invasion of Japan proved necessary. Revisionists claim that Truman's real interest was a power play with the Soviet Union and that the Japanese would have surrendered even earlier had the retention of their imperial system been assured. Truman wanted the war to continue, they insist, in order to show off America's powerful new weapon. This anthology exposes revisionist fallacies about Truman's motives, the cost of an invasion, and the question of Japan's surrender. Essays by prominent military and diplomatic historians reveal the hollowness of revisionist claims,

exposing the degree to which these agenda-driven scholars have manipulated the historical record to support their contentions. They show that, although some Japanese businessmen and minor officials indicated a willingness to negotiate peace, no one in a governmental decision-making capacity even suggested surrender. And although casualty estimates for an invasion vary considerably, the more authoritative approximations point to the very bloodbath that Truman sought to avoid. Volume editor Robert Maddox first examines the writings of revisionist Gar Alperovitz to expose the unscholarly methods Alperovitz employed to support his claims, then distinguished Japanese historian Sadao Asada reveals how difficult it was for his country's peace faction to prevail even after the bombs had been dropped. Other contributors point to continuing Japanese military buildups, analyze the revisionists' low casualty estimates for an invasion, reveal manipulations of the Strategic Bombing Survey of 1946, and show how even the exhibit commemorating the fiftieth anniversary of the bombing at the Smithsonian National Air and Space Museum hewed to the revisionist line. And a close reading of Tsuyoshi Hasegawa's acclaimed *Racing the Enemy* exposes many grave discrepancies between that recent revisionist text and its sources. The use of atomic bombs against Japan remains one of the most controversial issues in American history. Gathered in a single volume for the first time, these insightful readings take a major step

toward settling that controversy by showing how insubstantial Hiroshima revisionism really is--and that sometimes history cannot proceed without decisive action, however regrettable. On a distant planet, two human societies keep an uneasy equilibrium—one nonviolent, the other ferocious—in this “triumphant writing performance” (Atlantic City Press). A fact-finding mission has crash-landed on a harsh world, leaving entomologist Francis Lostwax and physicist Burne Newman marooned. The scientists are rescued by a mysterious society whose inhabitants are wholly incapable of murder, assault, rape, or any other form of aggression. Protected by a river made of liquid hate, the descendants of Quetzalia’s original human colonists have devised a strange techno-religion that has in turn engendered a culture of total pacifism. While Burne undertakes to rid the planet of the savage and menacing brain-eaters that flourish beyond the utopia’s walls, Francis cultivates his romantic feelings for Tez Yon, the Quetzalian surgeon who saved his life. But the entomologist’s obsession with Tez’s soul leads him down a dark and twisted path, in time confronting him with a terrible dilemma. Should he murder the woman he loves to save a society he abhors?
