In her memoir Talking to the Stars: Bobbie Wygant's Seventy Years in Television, Bobbie Wygant recalls her trailblazing career as an arts and entertainment reporter for Dallas-Fort Worth's Channel 5. Started in 1948 by Amon G. Carter, WBAP (now KXAS) was the first television station west of the Mississippi, and Wygant was there from the beginning. Like everyone on that early Channel 5 staff, Wygant pitched in to do a little of everything—writing copy, performing live on-air skits, presenting commercials—but she soon became known for the way she connected with celebrities. In a career spanning seven decades, Wygant has interviewed literally thousands of the most notable entertainers and celebrities since the 1950s—from Bob Hope, Jane Fonda, and Denzel Washington to Meryl Streep, Gwyneth Paltrow, and Matt Damon. Wygant was live on the air with her popular midday program Dateline on November 22, 1963, when news broke of JFK's assassination. A few months later, during their debut tour of the US, she interviewed the Beatles. In addition to charming and often funny accounts of her interviews with the stars, Wygant's personal observations of television broadcasting as it emerged at WBAP-TV offer fascinating insights into the infancy of today's multi-billion-dollar industry. This engaging and informative volume includes more than three hundred photographs of her favorite celebrity encounters. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.
