The source of any photograph is not the camera or even the scene viewed through the viewfinder-it is the mind of the photographer: this is where an image is created before it is committed to a memory card or film. In *The Photographer's Mind*, the follow-up to the international best-seller, *The Photographer's Eye*, photographer and author Michael Freeman unravels the mystery behind the creation of a photograph. The nature of photography demands that the viewer constantly be intrigued and surprised by new imagery and different interpretations, more so than in any other art form. The aim of this book is to answer what makes a photograph great, and to explore the ways that top photographers achieve this goal time and time again. As you delve deeper into this subject, *The Photographer's Mind* will provide you with invaluable knowledge on avoiding cliché, the cyclical nature of fashion, style and mannerism, light, and even how to handle the unexpected. Michael Freeman is the author of the global bestseller, *The Photographer's Eye*. Now published in sixteen languages, *The Photographer's Eye* continues to speak to photographers everywhere. Reaching 100,000 copies in print in the US alone, and 300,000+ worldwide, it shows how anyone can develop the ability to see and shoot great digital photographs. Thebes in the First Millennium BC is a collection of articles, based mostly, but not entirely, on the talks given at the conference of the same name organised by the team of the South Asasif Conservation Project, an Egyptian-American Mission working under the auspices of the Ministry of State for Antiquities, Egypt, in Luxor in 2012. The organisers of the conference and editors of the volume, Elena Pischikova, Julia Budka, and Kenneth Griffin, brought together a group of prominent scholars to share and discuss the results of their recent field research in the tombs and temples of the Twenty-fifth – Twenty-sixth Dynasties in Thebes, Abydos, and Saqqara. This volume assembles current studies on royal and elite monuments of the Libyan, Kushite, and Saite Periods, and places them in a wider context. This volume investigates such aspects of research as tomb and temple architecture, burial assemblages, religious texts, paleography, artistic styles, iconography, local workshops, and archaism, providing a new perspective to the current scholarship and future exploration of these topics. The volume is further enriched by the inclusion of chapters on the conservation and preservation of monuments representing the present-day approach to the development of archaeological sites. This is a photography book, and although some tips are offered to aid others in similar photography, it is not an instruction manual. Since the beginning of my memory I have always been fascinated with the sky and everything contained therein. Clouds, stars, moon and even the sun have always garnered my consistent attention and many hours both day and night I have stood captivated starting into the sky. As one my expect this volume contains photographs of the sky and its occupants, clouds, moon, sun in various combinations as presented by nature and any other entity who may claim responsibility for such a marvelous scene. I bow to all of you. For those interested in hardware and technique I will say that most of thee images were taken with a Nikon D600 fitted with a 500MM preset lens, a Nikon D5100 that has been converted to see in infrared and fitted with a 24-120MM Nikkor zoom lens. A few of them were even taken on film with a Pentax 645 fitted with various lenses. Can you imagine that, film! Ah, the film used was either Kodak Ektar 120 for the color work or Kodak TMAX-100 for the monochrome. In all cases a tripod was used. It really doesn't matter which brand as any good tripod will serve you well. Mine was a Manfrotto fitted with a ball head. In all cases the camera was fired in a mirror up state with a cable release. Exposures varied between 1/30 - 1/125 of a second at f16 at iso 200 - why f16? The particular 500MM lens I used had an f-setting range of f8 through f32 and f16 is the sharpest setting for this individual lens. Vibration is not the only issue When shooting at night for all about your in camera light meter. O be aware of. Atmospheric conditions can plan a profound roll in the clarity of your images and cannot always be observed until examining the final images. If your images are not as sharp as you would like keep trying and remember that the atmosphere is less dense straight up than at the horizon. The vast difference between the bright moon an the black sky will render it all but useless. Try 1/30 sec at f16 or a combination thereof. One last thing of note. A 500MM lens is extraordinarily sensitive. So wait 5 to 10 seconds after you trip mirror up before you trip the shutter. Even a healthy breeze can ruin the sharpness of your images. I hope you enjoy the work contain herein. In *The Nikon Autofocus System, 2nd Edition*, photographer Mike Hagen, author of the bestselling *The Nikon Creative Lighting System*, takes his deep knowledge of Nikon technology and concentrates on its focus features. In this book, which covers all current Nikon DSLR models (including the D5 and D500), Hagen fully explains how Nikon autofocus works, including detailed discussions of all the autofocus modules, drive systems, and camera buttons and menus. He also devotes an entire chapter to explore how focus works with Nikon's lenses.

Armed with this general knowledge, Hagen then dives deep and offers camera setups, settings, and best practices for specific field techniques that address the photographic genres that are notoriously challenging for focus: action and sports (indoor and outdoor), wildlife (including birds in flight), and macro photography. He also covers genres such as portrait, landscape, underwater, low-light, and street photography. Hagen not only advises on the best ways to set up the camera and focus systems, he gives helpful tips and tricks throughout the book.

*The Nikon Autofocus System* also covers:

- Live view autofocus methods and settings
- Achieving great focus in video
- AF tracking
- AF shooting styles, such as back-button AF and shutter-release AF
- HDR, panoramas, and other techniques for shooting with a tripod
- An entire chapter on additional terms and techniques, such as hyperfocal distance, calibrating lenses, focus and flash photography, and more
