Williams syndrome (WS) is a neurodevelopmental genetic disorder with a prevalence of approximately 1 in 7500. It is caused by a hemizygous deletion of approximately 28 genes on the 7th chromosome (7q11.23), including the elastin allele. Individuals with WS have atypical facial characteristics, including medial eyebrow flair, epicanthal folds, upturned nose, elongated philtrum, and full lips. Infants typically experience constipation and colic. Cardiac and renal abnormalities, as well as hypertension, are common. Individuals with WS are at increased risk for hearing and vision difficulties. Gastrointestinal difficulties are common and include constipation and

diverticulitis. Joint abnormalities are observed in both children and adults with WS. Individuals with WS are overly friendly yet can experience nonsocial anxieties. Cognitive skills are typically in the mild to moderately delayed range. Relative strengths have been demonstrated in some aspects of language and face processing, while visuospatial skills are significantly delayed. For practice at a plausible price this is a newly revised edition. This book specifically designed for self-motivated self-study students who are seeking significant score improvement in the Law School. Relied on by students, professors, and practitioners. It is brilliant, basic and remarkably effective. The remarkable, trustworthy book is extremely useful to teach yourself the subject from the first day of class until your last review before the final. The first duty of a law book is to state the law as it is, truly and accurately, and then the reason or principle for it as far as it is known. Books are printed using fonts of 10 points size or larger and the text is printed in 1 column unless specifically noted. The three-volume work Perceiving in Depth is a sequel to

Binocular Vision and Stereopsis and to Seeing in Depth, both by Ian P. Howard and Brian J. Rogers. This work is much broader in scope than the previous books and includes mechanisms of depth perception by all senses, including aural, electrosensory organs, and the somatosensory system. Volume 1 reviews sensory coding, psychophysical and analytic procedures, and basic visual mechanisms. Volume 2 reviews stereoscopic vision. Volume 3 reviews all mechanisms of depth perception other than stereoscopic vision. The three volumes are extensively illustrated and referenced and provide the most detailed review of all aspects of perceiving the three-dimensional world. Volume 1 starts with a review of the history of visual science from the ancient Greeks to the early 20th century with special attention devoted to the discovery of the principles of perspective and stereoscopic vision. The first chapter also contains an account of early visual display systems, such as panoramas and peepshows, and the development of stereoscopes and stereophotography. A chapter on the psychophysical and analytic procedures used in investigations of depth perception is followed by a chapter on sensory coding and the geometry of visual space. An account of the structure and physiology of the primate visual system proceeds from the eye through the LGN to the visual cortex and higher visual centers. This is followed by a review of the evolution of visual systems and of the development of the mammalian visual system in the embryonic and post-natal periods, with an emphasis on experience-dependent neural plasticity. An account of the development of perceptual functions, especially depth perception, is followed by a review of the effects of early visual deprivation during the critical period of neural plasticity on amblyopia and other defects in depth perception. Volume 1 ends with accounts of the accommodation mechanism of the human eye and vergence eye movements.
