This volume offers researchers and practitioners new perspectives on applied theatre work, exploring the relationship between applied theatre and its intent, success and value. Applied theatre is a well-established field focused on the social application of the arts in a range of contexts including schools, prisons, residential aged care and community settings. The increased uptake of applied theatre in these contexts requires increased analysis and understanding of indications of success and value. This volume provides critical commentary and questions regarding issues associated with developing, delivering and evaluating applied theatre programs. Part 1 of the volume presents a discussion of the ways the concept of change is presented to and by funding bodies, practitioners, participants, researchers and policy makers to discover and analyse the relationships between applied theatre practice, transformative intent, and evaluation. Part 2 of the volume offers perspectives from key authors in the field which extend and contextualize the discussion by examining key themes and practice-based examples. First multi-year cumulation covers six years: 1965-70. The articles in this eBook are divided into three main chapters. Chapter 1 focuses on the role of specific proteins in the pathological processes of neurodegeneration, specifically Alzheimer's disease. Chapter 2 describes novel candidates and risk factors for the diagnosis of Alzheimer's disease. Chapter 3 targets various therapeutic interventions from pharmacological targets to cognitive function. This eBook thus provides an overall overview of the latest research in understanding mechanisms leading to the development of Alzheimer's disease, diagnosis, and therapeutic interventions. Concise Human Physiology is a multi-authored text specifically prepared for students of medicine and the allied health sciences in developing countries. The text has been carefully structured and written so as to be accessible - simple vocabulary is used and sentences are clear and concise. A careful and balanced integration of basic sciences and clinical medicine is achieved and clinical problems encountered in developing countries are given special attention throughout. All contributing authors to the text have had significant experience in teaching medicine and allied health science to students in developing countries. Each author has been selected for his/her expertise in a given specialty Vols. for 19 - include a publishers' directory. Open wide! Dentists care for people's teeth. Give readers inside information on what it's like to be a dentist. Readers will learn what dentists do, the tools they use and how people get this exciting job. Fun novelty notebook Small / journal / notebook to write in, for creative writing, planning and organizing. Would make a perfect gift for Birthday and Christmas Perfect Size at 6" by 9" 100 pages Softcover bookbinding Flexible paperback "First published 2012 in the UK by Rider, an imprint of Ebury Publishing, a Random House Group company." Since our first ancestor rose up to place one foot in front of another, our desire to walk has produced fundamental changes in our bodies and minds. In Perfect Motion, Jono Lineen investigates that transformation, and why walking has made us more creative, helped us to learn, constructed our perception of time, strengthened our resilience and provided a way of making sense of our life – and death. After the tragic loss of his younger brother, Lineen experienced walking's regenerative power firsthand. Grief-stricken and adrift, he set off on a 2700-kilometre solo trek across the Himalayas. He walked for months until his legs ached and feet blistered, and by the end of the expedition something had changed in him. He was stronger – not just physically, but psychologically and emotionally. What had happened? What had given him this feeling of peace; joy even? Determined to find out, he began researching the science and history of walking and running, and discovered that there were fascinating reasons for his metamorphosis. Now, weaving together his own remarkable personal stories with evolutionary research, psychology, neuroscience, anatomy and philosophy, Lineen reveals for the first time the powerful effect that even the shortest strolls can have on us. And why walking is what we're made to do; it is our perfect motion. "Comprehensive world directory of establishments conducting research in the medical and biochemical fields." Includes approximately 100 countries. Entries are arranged under countries in alphabetical order. Contains a chapter on international organizations. Each entry gives such information as address, products, affiliation, and number of graduate research staff. Titles of establishments and subject indexes.
