where you are or where you go. Most introductory texts provide a technology-based survey of methods and techniques that leaves the reader without a clear understanding of the interrelationships between methods and techniques. By providing a strategy-based introduction, the reader is given a clear understanding of how to provide overlapping defenses for critical information. This understanding provides a basis for engineering and risk-management decisions in the defense of information. Information security is a rapidly growing field, with a projected need for thousands of professionals within the next decade in the government sector alone. It is also a field that has changed in the last decade from a largely theory-based discipline to an experience-based discipline. This shift in the field has left several of the classic texts with a strongly dated feel. Provides a broad introduction to the methods and techniques in the field of information security Offers a strategy-based view of these tools and techniques, facilitating selection of overlapping methods for in-depth defense of information Provides very current view of the emerging standards of practice in information security The idea of a right to privacy, which arose in reaction to the rapid rise of newspapers, instant photography and the "paparazzi" of the 19th century, has evolved into a constitutional right in much of the developed world. It is enshrined in Hong Kong through Articles 28, 29, 30 and 39 of the Basic Law. Hong Kong stands proud as the first jurisdiction in Asia to enact legislation to safeguard personal data in the form of the Personal Data (Privacy) Ordinance, Cap 486 ("the Ordinance") which came into force in 1996. At its centre are the six Data Protection Principles based on the 1980 OECD Guidelines. The office of the Privacy Commissioner for Personal Data was created under this legislation to provide oversight and ensure compliance. The Octopus scandal in mid-2010 eventually led to substantial changes being made to the Ordinance that were enacted in 2012 and 2013, the main amendments being the Direct Marketing provisions and the provision of legal assistance and representation to aggrieved persons. In this digital age, the Ordinance is proving to be the main safeguard of our privacy rights. The Data Protection Principles seek to create broad common principles based on fairness that apply to the public and private sectors. The passage of twenty years since the enactment of the Ordinance has given rise to a substantial body of case law and administrative decisions on these principles and the other provisions of the Ordinance. The new amendments have already been the subject of judicial scrutiny. This publication, which replaces its predecessor, has the dual aim of becoming a practitioner's guide on the important subject of personal data privacy, containing, as it does, a detailed exposition of the principles and provisions in the Ordinance and a comprehensive source of reference materials, and of enabling the Privacy Commissioner to discharge his major duty to promote awareness and understanding of the Ordinance. The second edition includes not only a full discussion of these principles, but also summaries of all the seminal cases and Administrative Appeals Board rulings in this area, as well as a comprehensive list of all the pertinent cases. simplify the process of developing websites by combining the new and powerful Razor syntax with a fully extensible set of data and HTML helpers for performing common web tasks. The WebMatrix installation includes all the tools the developer requires to quickly create fully-functional, data-driven, dynamic sites using ASP.NET web pages. The lightweight custom development tool works alongside SQL Server Compact Edition and Internet Information Services (IIS) Express to provide a seamless and easy-to-use environment which enables the web developer to concentrate on the rapid development of feature-rich websites, without the need to learn the complex concepts and highly structured programming models which many other frameworks require. Webmail services are a convenient, internet-based access point for email management. A webmail user must trust the service provider to honor the user's individual privacy while accomodating their email contents. Webmail users are increasingly conscious of the risk to their privacy as many webmail services have fallen victim to cyberattacks where unwanted observers have exploited server vulnerabilities to steal user private data. The relationship of trust between webmail provider and webmail user has been further called into question with the reveal of NSA snooping of user email, often with the tacit approval of the webmail provider. We augment a modern webmail service with end-to-end encryption of user email data. Our system, SEED, is designed to respect the original functionality of the webmail service. Most notably, we enable search of encrypted message bodies using the webmail service's built-in search engine. With an ancillary web browser extension called SEED add-on, the user is able to manage email in the webmail client while decrypting sensitive email information in a separate local process. The browser extension manages the user's encryption keys and decrypts email ciphertext automatically such that the user remains ignorant of the underlying cryptographic implementation as they browse their email. Built upon Gmail, SEED stores a user's email data on Google's remote servers and guarantees that Google is unable to interpret it. When managing their email, the user still enjoys the full capabilities of the Gmail web client, including composing, reading, and robustly searching email by message metadata. The user is able to do all of this without revealing their usage habits to Google. The user is able to do all of this without revealing their emails to Google. Using SEED, the user benefits from the conveniences of webmail and preserves the integrity of their private information stored online. NEW PERSPECTIVES ON THE INTERNET has been updated to cover the newest releases of the three main web browsers including Internet Explorer 9, Mozilla Firefox 4, and Google Chrome. With the New Perspectives critical-thinking, problem-solving approach, students will learn basic to advanced features of the Internet from Browser Basics to Electronic Commerce. This "Everyone" book attempts to guide the reader through the more essential steps of understanding the basic principles or elements that constitute the daily work of investigators in fields relating to computing and electrical loss. The chapter's are meant to set a foundation for people who may want to enter the field of investigations, or are at the beginning of a career in the area, or are seasoned investigators looking to delve into more contemporary areas of investigations, or for persons that are just interested in reading about matters or topics that are currently revealed in differing forms of media, such as in the successful TV drama series "CSI." The book is formatted sequentially so that the reader can review important legal matters that are a part of most investigations and then go on to peruse the elements of basic electrical principles as they apply to certain types of fire and fault losses. These beginning chapters set a broad stage for the various areas of computing that follow. The book does not necessarily have to be read in the order that it was written. In a sense, the reader may choose to use the book as a reference book. The chapters were written, for the most part, to be able to stand alone, as monographs. There are many chapters that review a broad range of more common topics and there are chapters concerned with more esoteric areas of computing and electronics. Some of these chapters discuss the high-tech methods that are sometimes deployed by thieves, terrorists, pedophiles, stalkers, etc. All of the co-authors reflect their experience as individuals that work closely with the criminal justice and civil institutions. **PRODUCT ONLY AVAILABLE WITHIN CENGAGE UNLIMITED.** Provide you with the latest comprehensive coverage of Google Chrome™, Mozilla Firefox, and Microsoft Edge with **NEW PERSPECTIVES ON THE INTERNET: COMPREHENSIVE, 10E.** You will master basic to advanced skills that help you better understand and more effectively use the Internet.
