Global Companies, Local Innovations Nov 30 2020 Investigating the innovation activities of multinational corporations, this book uncovers and examines why the geography of innovation by multinationals is overwhelmingly local, in spite of their global operations in manufacturing and sales through case studies of produce development by three global players: Toyota, Sony, and Canon. The microdynamic approach of the book allows an in-depth investigation of the engineering and technical aspects of innovation making. The book unfolds the complex and constant process of trial and error in innovation and reveals three fundamental natures of innovation making: complexity, interdisciplinarity, and prototyping and testing. In order to manage these three natures of innovation, firms have to plan, ironically, for unplanned situations and to collocate knowledge, people, and resources.

Japan's Network Economy Jul 27 2020 Japan's economy has long been described as network-centric. A web of stable, reciprocated relations among banks, firms, and ministries, is thought to play an important role in Japan's ability to navigate smoothly around economic shocks. Now those networks are widely blamed for Japan's faltering competitiveness. This book applies structural sociology to a study of how the form and functioning of this network economy has evolved from the prewar era to the late 90s. It asks whether, in the face of deregulation, globalization, and financial disintermediation, Japan's corporate networks - the keiretsu groupings particularly - have 'withered away', losing their cohesion and their historical function of supporting member firms in hard times. Using detailed quantitative and qualitative analysis, this book's conclusion is a qualified 'yes'. Relationships remain central to the Japanese way of business, but are much more subordinated to the competitive strategy of the enterprise than the network economy of the past.

Beyond Lean Dec 20 2019 This book by Peter Béndek presents a strong case against the current practice of business operations improvement, based on numerous studies from the business world as well as insights

from the most prestigious authors of the last fifty years. The author contests the applicability and indeed the relevance of the Toyota Production System and its spin-offs to the Western context, claiming that a revised approach is much better suited to taking our specific cultural conditions into account, while also combining increased transparency, speed, and sustainability of change with a robust value-creating capability. Dr. Béndek argues that this approach can have a far-reaching impact on corporate cultures by offering an all-encompassing learning system, one that provides a more coherent and actionable continuous improvement strategy than conventional approaches. The book offers an important guide to rethinking operations management, both in academia and business practice.

At over 450 pages it covers the full array of Japan's diverse industries and sectors, from fisheries and lumber to steel and automobiles, and in the service industries from banking to telecommunications. Forward Drive Apr 23 2020 This comprehensive account of the past, present and future of the automobile examines the key trends, key technologies and key players involved in the race to develop clean, environmentally friendly vehicles that are affordable and that do not compromise on safety or design. Undertaking a rigorous interrogation of our global dependency on oil, the author demonstrates just how unwise and unnecessary this is in light of current developments such as the fuel cell revolution and the increasing viability of hybrid cars, which use both petrol and electricity - innovations that could signal a new era of clean, sustainable energy. The arguments put forward draw on support from an eclectic range of sources - including industry insiders, scientists, economists and environmentalists - to make for an enlightening read.
