My Road from Damascus Jan 03 2021 "A lyrical, extremely rich narrative of loss, memory, and trauma." — STARRED review, Kirkus Reviews An extraordinary account of survival in Syria's most notorious military prisons that is written with "brutal clarity — and yet, there is a poetic quality to the telling." — Frances Itani, award-winning author of Deafening and Remembering the Bones Jamal Saeed arrived as a refugee in Canada in 2016. In his native Syria, as a young man, his writing pushed both social and political norms. For this reason, as well as his opposition to the regimes of the al-Assads, he was imprisoned on three occasions for a total of 12 years. In each instance, he was held without formal charge and without judicial process. My Road from Damascus not only tells the story of Saeed's severe years in Syria's most notorious military prisons but also his life during the country's dramatic changes. Saeed chronicles modern Syria from the 1950s right up to his escape to Canada in 2016, recounting its descent from a country of potential to a pawn of cynical and corrupt powers. He paints a picture of village life, his youthful love affairs, his rebellion as a young Marxist, and his evolution into a free thinker, living in hiding as a teenager for 30 months while being hunted by the secret police. He recalls his brutal prison years, his final release, and his family's harrowing escape to Canada. While many prison memoirs focus on the cruelty of incarceration, My Road from Damascus offers a tapestry of Saeed's whole life. It looks squarely at brutality but also at beauty and poetry, hope and love.

Global Tectonics and Earthquake Risk Sep 11 2021 Global Tectonics and Earthquake Risk discusses the geostatistical treatment of earthquake probabilities. The book reviews global tectonics and geologic history, including evidence of change, Pangaea, geochronology, tectonic revolutions, and the breakup of Pangaea. The book discusses the formation of Pangaea which later broke down into the present continental cores of Asia, Europe, Africa, Australian, Antarctica, and the Americas. The book describes the separation of North and South America from Europe, how Africa became established during the Cretaceous time, and how India split off from Africa to become welded to Asia at the Himalayas. The text also explains earthquake risk in terms of stochastic processes, point processes, and illustrates modeling of the earthquake process. The "Large-Earthquake Model" is based on a list of the largest earthquakes in the region, while a more

sophisticated model requires the incorporation of non-Markovian effects (aftershock sequences). The book cites an application of investigations done on California where an earthquake of magnitude 5 is expected to occur every three months. An earthquake of magnitude 8 or greater is predicted to happen every 100 years but the book notes that the return period exceeds the range of the period of recorded data (which is only 31 years). Presented in another way, the text concludes that the probability of occurrence of an event of magnitude 8 earthquake or over in any given year is about one percent. The book can prove helpful for geologists, seismologists, meteorologists, or practitioners in the field of civil and structural engineering.

Volume 1 (1964) dealt with contributions to the field up to 1890. Volume 2 (1973) dealt with the concepts and contributions of William Morris Davis. Volume 3 (1991) covered historical and regional themes during the 'classic' period of geomorphology, between 1980 and 1950. This volume concentrates on studies of geomorphological processes and Quaternary geomorphology, carrying on these themes into the second part of the twentieth century, since when process-based studies have become so dominant. It is divided into five sections. After chapters dealing with geological controls, there are three sections dealing with process and form: fluvial, glacial and other process domains. The final section covers the mid-century revolution, anticipating the onset of quantitative studies and dating techniques. The volume's objective is to describe and analyse many of the developments that provide a foundation for the rich and varied subject matter of contemporary geomorphology. Nature of Geography as Perceived in Systems Theory Oct 24 2022 Geography is not what we have assumed it, we have conceived it and we have perceived it, but it is that what we have not imagined it-it is around us. It is a system in itself. Because, human behaviour becomes rational, when it acts individually, but is becomes rational, when it operates upon in a collective form. Therefore, it is very difficult to understand man and his behaviour in a given situation. So it is incredible to argue about the discipline, its past history and the methodological contents. It is a misconceived notion of set boundary and a goal of its own, in a multidimensional facets of the changing world complexes in which we are living. Geography in its manifestations begins with the land-scape evolution (Physical basis), interacts with the phenomena culminating in human relationships, (Cultural land-scape) of conceptual world of real and abstract, interactions and processes, conditions and relations of multivariate facets of elements. Geographers are thus, drawn to the illusion with perplex mind of geographical images. This perception has drawn geography and geographers both into a state of unending dilemma of academic jargon of puzzles i e. Whether it is founded on systems theory or simply an irrelevant distraction ? Science provides us very sharp tools. But any craftsman will tell you it is the sharp tool which can do most damage or harm when misapplied. It is apparently observed that geographers are badly operationalised with their blunted tools. The present attempt is thus, to discuss all those problems arises due to multidimensional approaches of the past, present analysis and future methodologies, more particularly in the system analogy of systems theory, General Systems and the General Systems Theory, as all these notions have different connotations. How geography as a discipline is fitted well in the analogy of systems theory has been the main concern to these volumes. Let us explore the possibilities-What Geography is? The first volume deals with the Systems Theory and Geography, whereas, the second interprets the Possible World of Geographer in Systems Theory. Contents Vol. I Part I- General Systems & Systems Theory; Chapter 1: General Systems Theory; Chapter 2: General Systems Theory: Specific Features; Chapter 3: General Systems Theory as a Metatheory; Chapter 4: Outline History of the Systems Theory; Chapter 5: The Systems Approach and its Development; Chapter 6: Classification of Systems into Open and Closed-Logic of Methodological Problems;
