This book describes what life was like for my family and me living in rural, suburban, and urban Alabama during the 1940's, 50's, and 60's. Life for a poor black family living in Alabama during these decades was quite challenging. Even more challenging was being a poor black male growing up in Alabama during the 40's, 50's, and 60's. This is my story. No other accounting text takes you further or gives you more. With

In this timely, original and sophisticated collection, writers from the Global South demonstrate that forms of publicness are multiple, mobile and varied. The notion that societies mediate issues through certain kinds of engagement is at the heart of imaginings of democracy and often centers on the ideal of the public sphere. But this imagined foundation of how we live collectively appears to have suffered a dramatic collapse across the world, with many democracies apparently unable to solve problems through talk - or even to agree on who speaks, in what ways and where. In the 10 essays in this timely, original and sophisticated collection, writers from southern Africa combine theoretical analysis with the examination of historical cases and contemporary developments to demonstrate that forms of publicness are multiple, mobile and varied. They propose new concepts and methodologies to analyse how public engagements work in society. *Babel Unbound* examines charged examples from the Global South, such as the centuries old Timbuktu archive, Nelson Mandela as a powerful absent presence in 1960s public life, and the challenges to the terms of contemporary debate around the student activism of #rhodesmustfall and #feesmustfall. These show how issues of public discussion span both archive and media, verbal debates in formal spaces and visual performances that circulate in unpredictable ways. This book and its author grew up together. The 1960s in America transformed everyone who lived through this amazing time in our nation's history. Civil rights laws were fought for and passed; women began to find a voice and break down barriers. Immigrant workers and Native Americans raised their voices. We became a smarter, more aware nation—for a while. The Vietnam War became a symbol of those times. The music helped define us, and the illegal use of banned substances gave some of us the temporary courage to face the insanity head-on. The ranch is a mostly accurate first-person account of one young man's strange journey from gung ho high school student to landing himself in the middle of the "world's most dangerous navy." Our hero slowly evolves into a war resister who gets into the exact amount of

trouble to get assigned to a horse ranch in the U.S. Navy. There are a few rants that I included for mostly therapeutic reasons and several well-chosen fits of profanity that help to paint the military experience as it was and, I believe, still is to this day. I consider this book funny and thoughtful, but then I'm severely prejudiced. I wrote this back cover account myself because George Carlin and Joseph Heller had busy schedules in the afterlife, and I don't know Sara Silverman—yet. The Ranch is my first attempt at being considered a writer. I have plans to write a second book, which will document my experience as a telephone man in Northeast New Jersey. There will be plenty of danger, sex, drugs, and rock and roll with a hint of The Sopranos, so don't spoil my enthusiasm and buy this book. Thanks, America. Plenoptic cameras and Shack-Hartmann wavefront sensors are lenslet-based optical systems that do not form a conventional image. The addition of a lens array into these systems allows for the aberrations generated by the combination of the object and the optical components located prior to the lens array to be measured or corrected with post-processing. This dissertation provides a ray selection method to determine the rays that pass through each lenslet in a lenslet-based system. This first-order, ray trace method is developed for any lenslet-based system with a well-defined fore optic, where in this dissertation the fore optic is all of the optical components located prior to the lens array. For example, in a plenoptic camera the fore optic is a standard camera lens. Because a lens array at any location after the exit pupil of the fore optic is considered in this analysis, it is applicable to both plenoptic cameras and Shack-Hartmann wavefront sensors. Only a generic, unaberrated fore optic is considered, but this dissertation establishes a framework for considering the effect of an aberrated fore optic in lenslet-based systems. The rays from the fore optic that pass through a lenslet placed at any location after the fore optic are determined. This collection of rays is reduced to three rays that describe the entire lenslet ray set. The lenslet ray set is determined at the object, image, and pupil planes of the fore optic. The consideration of the apertures that define the lenslet ray set for an on-axis lenslet leads to three classes of lenslet-based systems.

Vignetting of the lenslet rays is considered for off-axis lenslets. Finally, the lenslet ray set is normalized into terms similar to the field and aperture vector used to describe the aberrated wavefront of the fore optic. The analysis in this dissertation is complementary to other first-order models that have been developed for a specific plenoptic camera layout or Shack-Hartmann wavefront sensor application. This general analysis determines the location where the rays of each lenslet pass through the fore optic establishing a framework to consider the effect of an aberrated fore optic in a future analysis. Antennas represent a critical technology in any of these wireless systems. Not only do they directly affect the received power of the system, they are also typically the largest and most visible part. Recently, the need for low-cost, low-profile, and lightweight antenna in the frequency range of the microwave/millimeter wave/THz band has regained momentum. "Basic Principles of Fresnel Antenna Arrays" provides us with the basics of the various Fresnel

Antenna approaches, in order to achieve low-cost, low-profile, and lightweight antenna in the microwave/millimeter wave band. A potential solution of the antenna problem lies in using lens technology in an array. The Fresnel zone plate lens (FZPL) antenna is in particular an interesting candidate for the array element. The limiting focusing properties of FZPL including subwave length focus are described in detail. The book further presents a novel hexagonal FZPL antenna which can be more effectively packed in an array due to its shape. Before considering the hexagonal FZPL antenna in an array, the authors investigate two ideas, described as methods to potentially improve the radiation characteristics. The first idea is to change the reference phase of the Fresnel zone radii - a novel free parameter in the usual design of zone plate's lenses and antennas. To further improve the radiation characteristics of the hexagonal FZPL antenna, a technique involving Fresnel zone rotation is investigated. The book is of interest for designers of optical systems because, taking scaling effects into account, the characteristics of diffractive quasioptical elements are valid for diffractive focusing elements of integrated optics. After his daughter's murder, a grieving father confronts God with desperate questions -- and finds unexpected answers -- in this riveting and deeply moving #1 NYT bestseller. When Mackenzie Allen Phillips's youngest daughter Missy is abducted during a family vacation, he remains hopeful that she'll return home. But then, he discovers evidence that she may have been brutally murdered in an abandoned shack deep in the Oregon wilderness. Four years later, in this midst of his great sadness, Mack receives a suspicious note that's supposedly from God, inviting him back to that shack for a weekend. Against his better judgment, he arrives on a wintry afternoon and walks back into his darkest nightmare. What he finds there will change his life forever. In recent years, there has been increasing activity in the research and design of optical systems based on liquid crystal (LC) science. Bringing together contributions from leading figures in industry and academia, Optical Applications of Liquid Crystals covers the range of existing applications as well as those in development. Estella Leopold, the daughter of revered American ecologist, conservationist and writer

Aldo Leopold, whose A Sand County Almanac is an enduring American classic, takes us inside the place where "land ethic" theory started. Shake Shack's first-ever cookbook, with 70 recipes and plenty of stories, fun facts, and pro tips for the home cook and ShackFan, as well as 200 photographs. This book, written by the designer of the world's largest telescope, the VLT in Chile, covers the essential modern developments in telescope optics. In the last twenty years, modern technology has revolutionized not only manufacturing and test procedures but also the entire area of quality specification. In addition to these topics, the book also covers the alignment of telescope optics, atmospheric optics, adaptive optics, reflective coatings, and ancillary equipment. Richly illustrated, this work covers important modern techniques, which makes it one of the most complete references on telescope optics. For years, there has been uncertainty regarding Paul Young's The Shack. Some have suspected heresy but have been unable to pin down exactly what Paul Young believed. James De Young, Th.D., who has known Paul Young for a couple decades, wrote Burning Down the Shack to expose Christians to the fact that Paul Young espoused universalism. Now "the cat is out of the bag." In his newest book, Lies We Believe about God, Young blatantly confesses adherence to universal reconciliation, as well as twenty-seven other beliefs that are heretical. Here are some of Paul Young's unbiblical claims: · God is not in control of everything · God submits to human beings · God is a Christian · God is a sexual being, equally male and female · People do not need to get saved · Sin and hell do not separate people from God · The cross was man's idea, not God's · People have a second chance to believe after death · Everyone is a child of God · Universal reconciliation has been accomplished for all people · The God of evangelical faith tortured his child, Jesus, and is the perpetrator of evil Drawing upon his life-long teaching of the Bible and the original languages, James De Young appeals to the Bible to expose Paul Young

as a heretic. In appendices, he also furnishes proof that Paul Young violates the Nicene Creed and the beliefs of the early church father Athanasius. Finally, we have a book written by one who is both personally and academically qualified to expose the true nature of Young's writings. De Young will empower you to:

- Discover the heresy in Young's book, *Lies We Believe About God*
- Expand your ability to answer the lies found in universal reconciliation
- Enhance your capacity to discern between the truth and falsehood
- Strengthen your confidence in the truth of the Bible

This volume is presented as a tribute to "two icons from the world of optics"--in the words of editors Harvey (Center for Research and Education in Optics and Lasers, U. of Central Florida) and Hooker (electrical and computer and engineering, U. of Colorado)--both of whom have been affiliated with the Optical Sciences Center at the U. of Arizona. Twenty-one papers from a tribute conference, some highly technical and others more personal, detail the honorees contributions to optics and optics education. These are followed by 45 journal article reprints authored by Bob Shannon and Roland Shack or their students in the technical areas of optical design and analysis, image evaluation, applications of the marginal ray height--chief ray height diagram, optical testing, optical fabrication, phased telescope arrays, aberration theory, propagation effects in the atmosphere, and diffraction/surface scatter phenomena. Finally, 14 short, informal "anecdotes and accolades" of the two scientists are presented from the conference and elsewhere. Annotation :2005 Book News, Inc., Portland, OR (booknews.com).

Includes numerous business oriented features that make the course more relevant to future managers. Praised for its writing style and accessibility, this third edition continues with the themes of the previous edition: ethics, social responsibility, contemporary business and application issues, and international law. A full-text reporter of decisions rendered by federal and state courts throughout the United States on federal and state labor problems, with case, table and topical index. Where does evil come from? If there is a sovereign creator God, as Christian faith holds, is this God ultimately responsible for evil? Does God's sovereignty mean that God causes each instance of sin and suffering? How do Satan, his demons and hell fit into God's providential oversight of all creation and history? How does God interact with human intention and action? If people act freely, does God know in particular every human decision before the choice is made? In this important book Gregory A. Boyd mounts a thorough response to these ages-old questions, which remain both crucial and contentious, both practical and complex. In this work Boyd defends his scripturally grounded trinitarian warfare theodicy (presented in *God at War*) with

rigorous philosophical reflection and insights from human experience and scientific discovery. Critiquing the classical Calvinist solution to the problem of evil, he advocates an alternative understanding of the sovereignty of the trinitarian God and of the reality of Satan that sheds light on our fallen human condition. While all may not agree with Boyd's conclusions, *Satan and the Problem of Evil* promises to advance the church's discussion of these critical issues.

Publisher description: This widely used book in many printings begins with answers to forty commonly asked questions of first-year law students. It specifies a six-step approach to briefing a case with specific guidelines for accomplishing each step. The process of briefing cases is then demonstrated with excellent and poor briefs of increasing complexity. Emphasis is placed initially on the techniques of briefing as an introduction to the learning of legal reasoning, the first priority of the first year of law school. In addition, the book also demonstrates the relevance of more advanced modes of legal reasoning, including positivist, pragmatic, policy oriented, natural-law and other perspectives applied in decoding and understanding cases. In its introduction of jurisprudential perspectives, *Learning Legal Reasoning* transcends the typical technical/positivist orientation of most first-year materials.
