The United States has the highest documented incarceration rate in the world; in 2008, for every 100,000 citizens, 764 were in jails or prisons. With nearly half of ex-convicts committing crimes after their release, numerous support programs exist to facilitate their successful reintegration to society. This is a directory of ex-offender programs run by the national government as well as by individual states (and Puerto Rico, Virgin Islands, Washington, D.C.). Addresses, phone numbers and web sites are listed for all organizations that aid the ex-convict in locating employment, housing, support groups, clothing and food. A vital resource for both organizations and individuals interested in the rehabilitation of released offenders. "This edited volume seeks to redress the lack of scholarly work that takes promotion seriously as a form of social, cultural, political, and economic exchange. It unpacks the vernacular, the institutional structures, and the practices and performances that make up promotional culture in everyday life, offering diverse critical perspectives on how, as citizens, consumers, and users, we absorb, navigate, confront, and resist its influence. Contributions from both renowned scholars and emerging intellectuals make this book a timely and valuable contribution to the fields of media and communication studies, political science, cultural studies, sociology, and anthropology." -BOOK JACKET. A key question for China, which has for some time been a leading global manufacturing base, is whether China can progress from being a traditional centre of manufacturing to becoming a centre for innovation. In this book, Shang-Ling Jui focuses on China's software industry and examines the complete innovation

value chain of software in its key phases of innovation, standards definition, development and marketing. He argues that, except for software development, these key phases are of high added-value and that without adopting the concept of independent innovation as a guiding ideology, China's software enterprises - like India's - would have an uncertain future. In other words, the lack of core competence in the development of China's software industry might restrain the industry from taking the leading position and drive it towards becoming no more than the software workshop of multinationals over the long term. Shang-Ling Jui contends that China's software industry should and can possess its own complete innovation value chain. Having worked in China's software industry for many years, the author provides an inside-out perspective - identifying the strengths and weaknesses of the industry and defining the challenges in China's transition from "Made in China" to "Innovated in China." This book presents theories and case studies for corporations in developed nations, including Japan, for designing strategies to maximize opportunities and minimize threats in business expansion into developing nations. The case studies featured here focus on Asia, including China and India, and use examples of Japanese manufacturers. Five case studies are provided, including Hitachi Construction Machinery and Shiseido in China and Maruti Suzuki in India. These cases facilitate the reader's understanding of the business environments in emerging economies. This volume is especially recommended for business people responsible for international business development, particularly in China and India. In addition, the book serves as a useful resource for students in graduate-level courses in international management. This far-reaching resource covers a full spectrum of multi-faceted considerations critical for energy generation decision makers considering the adoption or expansion of wind power facilities. It contextualizes pivotal technical information within the real complexities of economic, environmental, practical and socio-economic parameters. This matrix of coverage includes case studies and analysis from developed and developing regions, including North America and Europe, Asia, Latin America, the Middle-East and Africa. Crucial issues to power generation professionals and utilities such as: capacity credits; fuel saving; intermittency; penetration limits; relative cost of electricity by generation source; growth and cost trends; incentives; and wind integration issues are addressed. Other economic issues succinctly discussed inform financial commitment to a project, including

investment matrices, strategies for economic evaluations, econometrics of wind energy, cost comparisons of various investment strategies, and cost comparisons with other energy sources. Due to its encompassing scope, this reference will be of distinct interest to practicing engineers, policy and decision makers, project planners, investors and students working in the area of wind energy for power generation. Many companies have a complex process for purchasing software that is required by IT projects, or better, by the business. Usually software is purchased by a centralized procurement function, and is either purchased on a project-by-project basis or as a large periodic software contract. Unfortunately purchasing software products does not automatically mean that these products are exploited throughout the organization providing the maximum possible value to the business units. Several issues call for a structured approach that gets the most business value out of software already purchased. The objectives of this approach are to: Create maximum awareness throughout the organization of the software purchased. Track software use in IT projects and act if products are not used at all, used improperly, or insufficiently used. Facilitate use of software products in projects, especially when software products are complex and require a lot of integration. We can summarize the overall objective of this approach as ensuring that the business units in an organization obtain the maximum possible value of software products purchased, which is also the scope of this IBM® Redbooks® publication. The shopper marketing methodology is a powerful, complete approach for satisfying target consumer demand at the point of maximum influence, and thereby driving consumers to purchase. It gives companies a far deeper understanding how consumers behave as shoppers, and leverages this intelligence across the entire supply chain to benefit all stakeholders: companies, brands, consumers, retailers, and shoppers. Shopper marketing requires supply chain partners to smoothly integrate complex sets of marketing and sales tools, in order to engage shoppers, build brand equity, and persuade shoppers when they move into "shopping mode." Internally, it also demands deeper coordination of R and D, marketing innovation, operations, logistics, and distribution. It isn't easy, but it offers remarkable, proven results that are virtually unachievable any other way. In Shopper Marketing , three of the field's pioneering innovators and consultants bring together state-of-the-art insights, strategic approaches, and supply chain execution methods for successfully employing shopper marketing initiatives throughout your organization. Dan Flint, Chris Hoyt and Nancy Swift clearly explain what shopper marketing is, and why it is critical for marketers to master. They review each of its six objectives and eight foundational principles, demonstrating how to adapt and apply it in your environment, overcome obstacles, and systematically create value along your entire "path to purchase." Drawing on their unsurpassed consulting experience, they also assess emerging trends and their implications, helping you deepen customer loyalty, extend competitive advantage, and improve

Industrial clusters in Silicon Valley, Hsinchu Park, and northern Italy, and in the vicinity of Cambridge, U.K., have captured the imagination of policymakers, researchers, city planners and business people. Where clusters take root, they can generate valuable spillovers, promote innovation, and create the critical industrial mass for sustained growth. For cities such as Kitakyushu, Japan, that are faced with the erosion of their traditional industrial base and are threatened by economic decline, creating a cluster that would reverse the downward trends is enormously attractive. Growing Industrial Clusters in Asia offers practical guidance on the nature of clusters and the likely efficacy of measures that could help build a cluster. It draws on the experience of both established dynamic clusters and newly emerging ones that show considerable promise. The insights that result from its analysis will be of particular interest to policy makers, urban planners, business people, and researchers. Relates to U.S. Dept. of the Interior's proposed sale 71, the second major Beaufort Sea lease sale. Sale 71 area located on Alaskan arctic coast. Two sections: characterization of Sale 71 environments, and interdisciplinary process analyses, impact predictions, and issue discussions. This IBM Redbooks publication is a companion to IBM System Storage Business Continuity: Part 1 Planning Guide, SG24-6547 .
