1 there exists a function  $f(x, y)$  such that from the first of these equations we obtain after integrating taking the partial derivative of the last expression with respect to  $y$  and setting the result equal to  $n(x, y)$  gives  $n(x, y)$  it follows that  $g(y) = 1$  and  $g'(y) = y$  hence  $f(x, y) = x^2y + y$  so the web a first course in differential equations with modeling applications
