Matt Keegan interviews artists and commissions writing to reassess the 1990s as the moment when the Democratic Party abandoned its New Deal values and swung to the right In the wake of the Trump election, artist Matt Keegan (born 1976) began investigating the Democratic Party's shifts over recent decades. In the late '80s, members of the Democratic Leadership Council

successfully moved the party's platform to the right by including a pro-business, pro-military, interventionist agenda, and downplaying social infrastructure as a calculated break from its New Deal-era foundation. This shift led to Bill Clinton's consecutive terms. 1996 captures this pivotal time in American politics and society through the experience of artists who completed their undergraduate studies in that year and voted for Clinton, and others who were born in 1996 and voted for the first time in 2016. Essays focus on cultural and ideological shifts from that time, such as the 1994 Crime Bill, 1996 Immigration Act, the Telecommunications Act, the start of Fox News and beyond. Timing belts offer a broad range of innovative drivetrain solutions; they allow low-backlash operation in robot systems, they are widely used in automated processes and industrial handling involving highly dynamic start-up loads, they are low-maintenance solutions for continuous operation applications, and they can guarantee exact positioning at high operating speeds. Based on his years of professional experience, the author has developed concise guidelines for the dimensioning of timing belt drives and presents proven examples from the fields of power transmission, transport and linear transfer technology. He offers definitive support for dealing with and compensating for adverse operating conditions and belt damage, as well as advice on drive optimization and guidelines for the design of drivetrain details and supporting systems. All market-standard timing belts are listed as brand neutral. Readers will discover an extensive bibliography with information on the various manufacturers and their websites. This practical handbook addresses both the needs of application engineers working in design, development and machine-building, and is well-suited as a textbook for students at universities and vocational schools alike. EBONY is the flagship magazine of Johnson Publishing. Founded in 1945 by John H. Johnson, it still maintains the highest global circulation of any African American-focused magazine. The author of "Losing Philadelphia" describes it as a "triptych"--three separate but related stories of a group of young hopefuls--artistic and otherwise--who are either living in or passing through New York City at different times during the 1980s. Its central character, Richard Finney, is a dazzlingly-gifted but still-struggling pianist who leaves the imprint of both his music and his self on those who befriend, annoy, or just hang around him. "Finney's circle," as you'll see, is quite a cast of characters indeed. This Intergovernmental Panel on Climate Change Special Report (IPCC-SREX) explores the challenge of understanding and managing the risks of climate extremes to advance climate change adaptation. Extreme weather and climate events, interacting with exposed and vulnerable human and natural systems, can lead to disasters. Changes in the frequency and severity of the physical events affect disaster risk, but so do the spatially diverse and temporally dynamic patterns of exposure and vulnerability. Some types of extreme weather and climate events have increased in frequency or magnitude, but populations and assets at risk have also increased, with consequences for disaster risk. Opportunities for managing risks of weather- and climate-related disasters exist or can be developed at any scale, local to international. Prepared following strict IPCC procedures, SREX is an invaluable assessment for anyone interested in climate extremes, environmental disasters and adaptation to climate change, including policymakers, the private sector and academic researchers. Goldsmith provides a historical review of biological aging theories including underlying evolution and genetics issues and describes exciting recent discoveries and new theories that are causing renewed interest in aging-by-design. There are many people that believe our education system is in trouble. As we compare test scores to other countries around the world, it appears we are not adequately preparing our children for the future. But this is only part of the problem because a lot of what kids need to know about the "real world" is not even discussed in school. Most high school students that are fast approaching graduation are not aware yet of the challenges they will face. They simply don't know what they don't know. They have spent 12 years being educated but will soon find out that they do not have all the tools needed to succeed in life. When they purchase their first car, they will not use Algebra

but they will need to understand the Time Value of Money equation to calculate the payments. Who teaches them that in school? The average American has around \$8,500 in outstanding credit card debt. The 2007-2008 sub-prime mortgage crisis demonstrated how much more we all need to learn about home mortgages and our personal finances. This is why this book is so important. The Real Life 101 Handbook is a beginners guide to the world of personal finance. It explains everything from how a checking account works to how to purchase your first home. It is for anyone and everyone who wants to learn how to make the best personal financial decisions in order to get the most out of the money they earn. The book does not have any secret formula for how you can quickly become rich, however, it gives you the information you need to develop your own plans to become financially secure. I hope you enjoy it.
