ARMS Remote User's Manual Aug 16 2022 This manual explains the operation of the Automatic Revenue Metering System Remote Prototype, commonly called the ARMS Remote or simply Remote. The ARMS Remote interfaces existing power meters to an automated revenue metering system. The Remote is contained in a single 24-in. (610-mm) rack-mounted panel. It consists of power supplies, a processor module, input/output (I/O) modules, a timing module, a tape cartridge recorder, a keypad, a 16-character alphanumeric display, status display lights, telemetry interface and tone equipment, a series of system test points, and I/O connectors to attach the Remote to the environment that it will monitor. This report discusses normal operation of the ARMS Remote from the user's viewpoint and describes all the steps required for successful use of the system. Since no ARMS Master Station exists at this time, all Master Station functions will be performed locally via Teletype or Remote keypad.

However, for understanding of the complete ARMS Remote/Master Station concept, Master Station functions are identified where possible. Information is included for the use of the local Teletype and keypad for Master Station actions. (Author).

User's Manual for an Army National Guard (ARNG) Armor and Mechanized Infantry Gunnery Training Assessment Database Oct 18 2022 "This user's manual describes a longitudinal database designed to permit the storage, retrieval, and analyses of gunnery-related data generated with Army National Guard (ARNG) armored and mechanized infantry units. The database was developed as part of an assessment of the Simulation in Training for Advanced Readiness (SIMITAR) time-compressed gunnery training strategy, as implemented in a test ARNG armored brigade (Smith, in publication). It contains gunnery performance measures from this test brigade and from six other enhanced "comparison" brigades where the SIMITAR training strategy was not introduced. These measures were collected from 1993-1997 and include first-run and final, live-fire, Table VIII gunnery qualification scores, tank main gun ammunition expenditures, related measures/information needed for assessing the impact of different training strategy interventions, and space set aside for recording the outcomes of training aids, devices, simulators and simulations (TADSS) usage. The databases is configured within a software program known as the Statistical Package for the Social Sciences (SPSS, Version 6.1 for Windows). Its files can be exported in a number of formats, including spreadsheet and database management programs, as well as into a number of other statistical utilities. This user's manual will help ARNG database managers use the SIMITAR database as a convenient repository for gunnery performance and related information and as a resource for future gunner-related strategy impact investigations."--P.i.

Aldus PageMaker User Manual Aug 24 2020 Provides layout for single or multi-page documents, integrating text and graphics on screen. Molecular Pathology Protocols Nov 26 2020 The era of molecular pathology has arrived. From its promising beginnings in research laboratories, the field has grown, and continues to grow, to become a vital part of the care of an ever-increasing number of patients. Because of its recent emergence from the research laboratory, many molecular pathology protocols we still to be found in the primary literature, and have not appeared in a text. Molecular Pathology Protocols contains laboratory protocols that have been developed by many of the authors for use in clinical molecular pathology laboratories and describe in detail how to perform these assays. This book is therefore intended for clinical laboratory use by medical technologists and pathologists. It will also be of interest to research workers who are performing these assays. In its broadest meaning, pathology is the study of disease, and therefore it follows that any disease for which the molecular basis is understood would be suitable as a topic for inclusion in this work. When selecting protocols, it was necessary to place limits on the number of chapters that could be feasibly presented in a single work. Those protocols that were selected are performed more frequently, or have achieved recognition as having important diagnostic utility in contemporary practice. A decision was made to exclude inherited genetic diseases with certain exceptions, such as those diseases that are associated with thrombotic states and are part of the traditional domain of pathology.
