OF IMMORTALIZED WARRIORS is a portrayal of the
United States during the controversial wars in
Iraq and Afghanistan. Center stage in the novel

is the late Captain Theodore Hume, the most decorated warrior in the country. It is his widow who engages Dr. James Isner, an upstart Ivy League economist, and Riley Cooper, a close acquaintance, both former Marines, to write a biography of this lionized but condemned Navy SEAL commando. Dr. Isner is determined to exploit the life of the American hero by advancing his own ideas that point to puzzling features of the United States, of Western culture and, more generally, of mankind's evolution that has up to now not been fully explained. The skeletons in the closet are the independent and inspiring Dotti Moore, Hume's first wife, who leaves him for another man, and a shocking but innovative clandestine mission he heads up in Afghanistan. A modern-day story of blood and treasure, politics, society, religion, fellowship, and wartime memories of an American hero. Linkages to Ancient Greece and Rome and former empires of the Middle East are examined?it is Mueller at his best. A skillfully crafted study of man and of freedom in the world. OF IMMORTALIZED WARRIORS, Mueller's fourth book, is a poignant military tale, with an exceptional message, and you will love it. In Censorship in Colonial Indonesia, 1901-1942 Nobuto Yamamoto traces the institutionalization of print censorship in the Netherlands Indies, specifically the interplay between the emergent nationalist movement and the censoring apparatus put in place to contain it. The success of plant-derived products such as paclitaxel (Taxol) in tumor therapy or artemisinin in the treatment of malaria has provided the impetus for the introduction of numerous research programmes, especially in Industry. A great deal of effort is being expended in the generation of novel lead molecules of vegetable, marine and microbial origin by the use of high throughput screening protocols. When interesting hits are found, it is essential to have methods available for the rapid isolation of target compounds. For this reason, both industry and academia need efficient preparative chromatographic separation techniques and experience in their application. Purified natural products are required for complete spectroscopic identification and full characterization of new compounds, for biological testing and for the supply of pharmaceuticals, standards, and starting materials for synthetic work. Obtaining pure products from an extract can be a very long, tedious and expensive undertaking, involving many

steps. Sometimes only minute amounts of the desired compounds are at hand and these entities may be labile. Thus it is an advantage to have access to as many different methods as possible in order to aid the isolation process. Although a certain amount of trial and error may be involved, nowadays there is the possibility of devising suitable rapid separation schemes by a judicious choice of the different techniques available. Motivation The other day I was waiting at the station for my train. Next to me a young lady was nonchalantly leaning against the wall. Suddenly, she took a cigarette pack out of her handbag, pulled out the last cigarette, put it between her lips, crushed the empty pack, threw it on the ground and hedonistically lit the cigarette. I thought to myself, "What a behavior?!". The nearest trashcan was just five meters away. So I bent down, took the crushed pack and gave it back to her, saying that she had lost it. She looked

at me in a rather deranged way, but she said nothing and of waste to the trashcan. brought the piece Often people are not aware of the waste they produce. They get rid of it and that's it. As soon as the charming lady dropped the cigarette pack, the problem was solved for her. The pack was on the ground and it suddenly no longer belonged to her. It is taken for granted that somebody else will do the cleaning up. There is a saying that nature does not produce waste. For long as humans obtained the goods they needed from the ground where they lived, the waste that was produced could be handled by nature. This has drastically changed due to urbanization and waste produced by human activities has become a severe burden. When a yacht explodes in the Bahamas, apparently killing six people, Sam Boyleston, an attorney from Texas and the brother of one of the victims, is compelled to investigate the circumstances, as does Raoul Kelly, a newspaper reporter. After the disaster the yacht's burned captain was temporarily marooned on a small island, and soon it becomes apparent that one person is ruthlessly manipulating events. But for Boyleston and Kelly proving guilt appears impossible ...
