Dynamic Teachers Sep 22 2022 This inspiring book examines the emerging roles of teachers whose classrooms reflect a rapidly changing society. The authors describe the qualities teachers need in order to adapt and become more successful in the classroom. They must be content and pedagogical experts in creating constructivist classrooms; see themselves as professionals making a commitment to professional behaviors; facilitate conditions for student learning; challenge students' thinking through appropriate questioning strategies; extend the classroom into the community and bring the community into the classroom; and become a change agent, advocating for school reform within the school, in the community, and in the seats of government. All teachers are capable of expanding their skills in order to achieve these goals, the authors contend, regardless of community support, financial resources, or preparation and training. Using information gathered from careful studies of working teachers, they provide a portrait of an emerging "dynamic teacher", illustrating how these educators differ from their colleagues. They highlight the reasons why such differences are essential to the success of schooling in the future and offer concrete suggestions for how practicing teachers can begin their own journey to becoming a "dynamic teacher".

Capital Cities: Varieties and Patterns of Development and Relocation Nov 24 2022 The issue of capital city relocation is a topic of debate for more than forty countries across the world. In this first book to discuss the issue, Vadim Rossman offers an in-depth analysis of the subject, highlighting the global trends and the key factors that motivate different countries to consider such projects, analyzing the outcomes and drawing lessons from recent capital city transfers worldwide for governments and policy-makers. *Capital Cities* studies the approaches and the methodologies that inform such decisions and debates. Special attention is given to the study of the universal patterns of relocation and patterns specific to particular continents and mega-regions and particular political regimes. The study emphasizes the role of capital city transfers in the context of nation- and state-building and offers a new framework for thinking about capital cities, identifying six strategies that drive these decisions, representing the economic, political, geographic, cultural and security considerations. Confronting the popular hyper-critical attitudes towards new designed capital cities, Vadim Rossman shows the complex motives that underlie the proposals and the important role that new capitals might play in conflict resolution in the context of ethnic, religious and regional rivalries and federalist transformations of the state, and is seeking to identify the success and failure factors and more efficient implementation strategies. Drawing upon the insights from spatial economics, comparative federalist studies, urban planning and architectural criticism, the book also traces the evolution of the concept of the capital city, showing that the design, iconography and the location of the capital city play a critical role in the success and the viability of the state.
