Basic breakthroughs in science, engineering, and measurement technology have brought fire testing to its current state of maturity. It has been a long and slow process that has seen several significant periods of growth. This growth in fire knowledge is associated with developments from a small number of scientists and engineers. The complete understanding of fire and its behavior in the wide range of environments awaits discovery and will be accomplished by future generations. Currently, there is still much to be learned about fire and much yet to be done with the development of and application of fire test methods. This treatise provides a history of the science that supports present work, the development of tools that make the study of fire possible, and the development of fire test methods that reflect the state of present day technology. The work is not meant to be a complete and comprehensive dissertation on the development of fire test methods but is an attempt to highlight significant contributions that have influenced the development of fire testing, in North America. Additionally, this paper provides insight into new opportunities for future studies and into the possibilities for development of future fire test methods. The Live Fire Test Law mandates realistic survivability and lethality testing of covered systems or programs. A provision of the law permits the Secretary of Defense to waive tests if live fire testing would be "unreasonably expensive and impractical." Though no waiver was requested before the F-22 program entered engineering and manufacturing development, the Defense Department later asked that Congress enact legislation to permit a waiver to be granted retroactively. Rather than enact such legislation, Congress requested a study to explore the pros and cons of full-scale, full-up testing for the F-22 aircraft program. The book discusses the origin of testing requirements, evaluates the practicality, affordability, and cost-benefit of live fire tests, and examines the role of testing, modeling, and data bases in vulnerability assessment. It is the Department of Commerce (Division of State Fire Marshal - Bureau of Testing and Registration) that administers the Ohio Fire Protection Exam.
