This brand new paper doll book from Paper Studio Press brings back the days of the 1930s and '40s when newspapers would include a paper doll as part of a comic strip. Artist Ted Menten, himself a comic artist in the past, has recreated the fun of bygone days with a two-doll book featuring a fashionable wardrobe of stylish creations inspired by the four seasons. There are lots of glamorous clothes to cut-out for models Babs and Amy as you recall waiting until Dad finished reading the newspaper so you could have the comics section with a paper doll such as Brenda Starr, Tillie the Toiler, Dixie Dugan and Mopsie Modes. This book deals with in-cylinder pressure measurement and its post-processing for combustion quality analysis of conventional and advanced reciprocating engines. It offers insight into knocking and combustion stability analysis techniques and algorithms in SI, CI, and LTC engines, and places special emphasis on the digital signal processing of in-cylinder pressure signal for online and offline applications. The text gives a detailed description on sensors for combustion measurement, data acquisition, and methods for estimation of performance and combustion parameters. The information provided in this book enhances readers' basic knowledge of engine combustion diagnostics and serves as a comprehensive, ready reference for a broad audience including graduate students, course instructors, researchers, and practicing engineers in the automotive, oil and other industries concerned with internal combustion engines.

Porting heads is an art and science. It takes a craftsman's touch to shape the surfaces of the head for the optimal flow characteristics and the best performance. Porting demands the right tools, skills, and application of knowledge. Few other engine builders have the same level of knowledge and skill porting engine heads as David Vizard. All the aspects of porting stock as well as aftermarket heads in aluminum and cast-iron constructions are covered. Vizard goes into great depth and detail on porting aftermarket heads. Starting with the basic techniques up to more advanced techniques, you are shown how to port iron and aluminum heads as well as benefits of hand and CNC porting. You are also shown how to build a high-quality flow bench at home so you can test your work and obtain professional results. Vizard shows how to optimize flow paths through the heads, past the valves, and into the combustion chamber. The book covers blending the bowls, a basic porting procedure, and also covers pocket porting, porting the intake runners, and many advanced procedures. These advanced procedures include unshrouding valves, porting a shortside turn from the floor of the port down toward the valve seat, and developing the ideal port area and angle. All of these changes combine to produce optimal flow velocity through the engine for maximum power. This is the fifth collection

of articles by Eliyahu Ashtor to be published by Variorum and focuses on the fundamental question of why, during the later Middle Ages, technology and industry declined, even collapsed, in the Muslim Levant, while simultaneously making enormous progress in the Christian West. An indefatigable researcher in archives all over the Mediterranean, Ashtor amassed quantities of data on this subject, and began to propose causal links between, on the one hand, demographic trends, types of political regime, economic policies and attitudes towards innovation, and on the other, the progress or decline of technology and industry. Although his work was cut short by his death in 1984, the information that Ashtor has made available, for instance on the sugar and the alkali industries, and the questions and hypotheses he has suggested will provide a vital basis for continuing research. The final article, dealing more specifically with the history of commerce, represents in effect a summation of the author's views on the role of the Jews in the trade of the Mediterranean.

La cinquième collection d'articles d'Eliyahu Ashtor à être publiée par Variorum (pour les deux volumes encore disponibles, voir p.00) se concentre sur la raison fondamentale pour laquelle, durant le Bas Moyen Age, la technologie et l'industrie dans le Levant musulman étaient en déclin, voire même en plein effondrement, alors qu'elles faisaient simultanément d'énormes progrès dans l'Ouest chrétien. Cherchiste infatigable des archives méditerranéennes, Ashtor a amassé quantité d'informations à ce sujet et a commencé à suggérer l'existence de lien de cause entre: d'une part, les tendances démographiques, les types de régimes politiques, la politique économique et les attitudes vis-à-vis du changement et, d'autre part, le progrès ou le déclin de la technologie et de l'industrie. Bien que son travail ait été interrompu par sa mort en 1984, l'information découverte par Ashtor, ainsi que les questions et hypothèses qu'il a suggéré forment une base essentielle à la continuation de la recherche. Le dernier article, qui traite plus spécifiquement de l'histoire du commerce, fait effet de récapitulatif quant aux opinions de l'auteur sur le rôle des juifs dans le commerce méditerranéen. The Diesel Engine Reference Book, Second Edition, is a comprehensive work covering the design and application of diesel engines of all sizes. The first edition was published in 1984 and since that time the diesel engine has made significant advances in application areas from passenger cars and light trucks through to large marine vessels. The Diesel Engine Reference Book systematically covers all aspects of diesel engineering, from thermodynamics theory and modelling to condition monitoring of engines in service. It ranges through subjects of long-term use and

application to engine designers, developers and users of the most ubiquitous mechanical power source in the world. The latest edition leaves few of the original chapters untouched. The technical changes of the past 20 years have been enormous and this is reflected in the book. The essentials however, remain the same and the clarity of the original remains. Contributors to this well-respected work include some of the most prominent and experienced engineers from the UK, Europe and the USA. Most types of diesel engines from most applications are represented, from the smallest air-cooled engines, through passenger car and trucks, to marine engines. The approach to the subject is essentially practical, and even in the most complex technological language remains straightforward, with mathematics used only where necessary and then in a clear fashion. The approach to the topics varies to suit the needs of different readers. Some areas are covered in both an overview and also in some detail. Many drawings, graphs and photographs illustrate the 30 chapters and a large easy to use index provides convenient access to any information the readers requires.

This book takes a completely new look at the Anthroposophical Soul Calendar. It is about the deeper meaning of the fifty-two weekly verses, which has remained essentially unexplored in the last hundred years since the first edition by Rudolf Steiner. A dense veil of Isis was spread over them, of which is well known that no mortal person can lift it. Only the immortal, psycho-spiritual human being, who knows himself at home in the extrasensory, higher worlds, is capable of doing this. Only to him the weekly verses reveal themselves as a travel guide through these worlds and lift him up to ever higher spiritual-cosmic realms until he reaches the experience of God, from where he gradually descends

again into a new life on Earth, enriched in spirit and fertilized in his soul. If the reader embarks on this journey, the spiritual archetype of the Soul Calendar is ultimately unveiled to him and he achieves an extended understanding of Man and Christ. By many quotations from Rudolf Steiner's lectures and books, the author virtually lets Steiners himself elucidate the breathtaking depths of his mysterious weekly verses. The original 'Black Caesar' was a legendary African pirate who made his fortune by repeatedly raiding cargo ships in the area around the Florida Keys. In this imaginative novel from popular American author Albert Payson Terhune, the fearsome pirate's descendents are determined to find his buried loot -- and to run off any interlopers who might be after the same prize. "60 Years of Holden" builds on the success of its predecessors (45 and 50 Years of Holden), bringing together vast amounts of technical information and specifications on the 100 model series that Holden has produced since it began manufacturing. Beginning with Holden's pre-1948 history, this book charts Holden's course in Australia, with In the first edition of this landmark book, business loyalty guru Fred Reichheld revealed the question most critical to your company's future: "Would you recommend us to a friend?" By asking customers this question, you identify detractors, who sully your firm's reputation and readily switch to competitors, and promoters, who generate good profits and true, sustainable growth. You also generate a vital metric: your Net Promoter Score. Since the book was first published, Net Promoter has transformed companies, across industries and sectors, constituting a game-changing system and ethos that rivals Six Sigma in its power. In this thoroughly updated and expanded edition, Reichheld, with Bain colleague Rob Markey, explains how practitioners have built Net Promoter into a full-fledged management system that drives extraordinary financial and competitive results. With his trademark clarity, Reichheld:

- Defines the fundamental concept of Net Promoter, explaining its connection to your company's growth and sustained success
- Presents the closed-loop feedback process and demonstrates its power to energize employees and delight customers
- Shares new and compelling stories of companies that have transformed their performance by putting Net Promoter at the center of their business

Practical and insightful, The Ultimate Question 2.0 provides a blueprint for long-term growth and success.

Engine production for the typical car manufactured today is a study in mass production. Benefits in the manufacturing process for the manufacturer often run counter to the interests of the end user. What speeds up production and saves manufacturing costs results in an engine that is made to fall within a wide set of standards and specifications, often not optimized to meet the original design. In short, cheap and fast engine production results in a sloppy final product. Of course, this is not what enthusiasts want out of their engines. To maximize the performance of any engine, it must be balanced and blueprinted to the exact tolerances that the factory should have adhered to in the first place. Four cylinder, V-8, American or import, the performance of all engines is greatly improved by balancing and blueprinting. Dedicated enthusiasts and professional racers balance and blueprint their engines because the engines will produce more horsepower and torque, more efficiently use fuel, run cooler and last longer. In this book, expert engine builder and veteran author Mike Mavrigian explains and illustrates the most discriminating engine building techniques and perform detailed procedures, so the engine is perfectly balanced, matched, and optimized. Balancing and blueprinting is a time consuming and exacting process, but the investment in time pays off with superior performance. Through the process, you carefully measure, adjust, machine and fit each part together with precision tolerances, optimizing the design and maximizing performance. The book covers the block, crankshaft, connecting rods, pistons, cylinder heads, intake manifolds, camshaft, measuring tools and final assembly techniques. For more than 50 years, balancing and blueprinting has been an accepted and common practice for maximi
