*Earth Abides May 24 2020 In this profound  
ecological fable, a mysterious plague has  
destroyed the vast majority of the human*

race. Isherwood Williams, one of the few survivors, returns from a wilderness field trip to discover that civilization has vanished during his absence. Eventually he returns to San Francisco and encounters a female survivor who becomes his wife. Around them and their children a small community develops, living like their pioneer ancestors, but rebuilding civilization is beyond their resources, and gradually they return to a simpler way of life. A poignant novel about finding a new normal after the upheaval of a global crisis.

*The Stars My Destination* Jul 06 2021 #5 in the Millennium SF Masterworks series, a library of the finest science fiction ever written. "Science fiction has only produced a few works of actual genius, and this is one of them." –Joe Haldeman #5 in the Millennium SF Masterworks series, a library of the finest science fiction ever written. "Science fiction has only produced a few works of actual genius, and this is one of them." –Joe Haldeman "Bester at the peak of his powers is, quite simply, unbeatable" –James Lovegrove Marooned in outer space after an attack on his ship, *Nomad*, Gulliver Foyle lives to obsessively pursue the crew of a rescue vessel that had intended to

leave him to die. When it comes to pop culture, Alfred Bester (1913-1987) is something of an unsung hero. He wrote radio scripts, screenplays, and comic books (in which capacity he created the original Green Lantern Oath). But Bester is best known for his science-fiction novels, and *The Stars My Destination* may be his finest creation. With its sly potshotting at corporate skullduggery, *The Stars My Destination* seems utterly contemporary, and has maintained its status as an underground classic for fifty years. (Bester fans should also note that iBooks has reprinted *ReDemolished*, which won the very first Hugo Award in 1953.)

Science for Fun Experiments Mar 02 2021 Provides instructions for a selection of hands-on experiments introducing basic scientific principles, in such areas as magnetism, electricity, and water.

Kalamazoo County and the Civil War Dec 11 2021 More than 3,000 Kalamazoo County men served in the Union forces during the Civil War. They fought in the most horrific battles from Blackburn's Ford to Appomattox, and 396 did not return home. The war tested the area not just on the battlefield but in its collective back yard and, at times, its front yard. A peace rally held by local Democrats was interrupted by Lincoln

supporters who viewed the Democrats as traitors. Residents reacted jubilantly to the capture of Richmond, the Confederate capital, and mourned the assassination of Lincoln, who had visited the village of Kalamazoo before the war. As veterans, the former combatants left behind indelible reminders of their sacrifice. Local historian Gary L. Gibson uncovers long-lost stories, many never before told, of Kalamazoo County during and after America's bloodiest conflict.

*The Mechanics of Wonder* Dec 19 2019 This is a sustained argument about the idea of science fiction by a renowned critic. Overturning many received opinions, it is both controversial and stimulating. Much of the controversy arises from Westfahl's resurrection of Hugo Gernsback - for decades a largely derided figure - as the true creator of science fiction. Following an initial demolition of earlier critics, Westfahl argues for Gernsback's importance. His argument is fully documented, showing a much greater familiarity with early American science fiction, particularly magazine fiction, than previous academic critics or historians. After his initial chapters on Gernsback, he examines the way in which the Gernsback tradition was adopted and modified by later magazine editors and early critics. This involves a re-evaluation of the importance of John W. Campbell to the history of science fiction as well as a very interesting critique of Robert Heinlein's *Beyond the Horizon*, one of the seminal texts of American science fiction. In conclusion, Westfahl uses the theories of Gernsback and Campbell to develop a descriptive definition of science fiction and he explores the ramifications of that definition. The

*Mechanics of Wonder will arouse debate and force the questioning of presuppositions. No other book so closely examines the origins and development of the idea of science fiction, and it will stand among a small number of crucial texts with which every science fiction scholar or prospective science fiction scholar will have to read.*

William Gibson May 04 2021 The leading figure in the development of cyberpunk, William Gibson (born in 1948) crafted works in which isolated humans explored near-future worlds of ubiquitous and intrusive computer technology and cybernetics. This volume is the first comprehensive examination of the award-winning author of the seminal novel *Neuromancer* (and the other books in the *Sprawl* trilogy, *Count Zero* and *Mona Lisa Overdrive*), as well as other acclaimed novels including recent bestsellers *Pattern Recognition*, *Spook Country*, and *Zero History*. Renowned scholar Gary Westfahl draws upon extensive research to provide a compelling account of Gibson's writing career and his lasting influence in the science fiction world. Delving into numerous science fiction fanzines that the young Gibson contributed to and edited, Westfahl delivers new information about his childhood and adolescence. He describes for the first time more than eighty virtually unknown Gibson publications from his early years, including articles, reviews, poems, cartoons, letters, and a collaborative story. The book also documents the poems, articles, and introductions that Gibson has written for various books, and its

discussions are enriched by illuminating comments from various print and online interviews. The works that made Gibson famous are also featured, as Westfahl performs extended analyses of Gibson's ten novels and nineteen short stories. Lastly, the book presents a new interview with Gibson in which the author discusses his correspondence with author Fritz Leiber, his relationship with the late scholar Susan Wood, his attitudes toward critics, his overall impact on the field of science fiction, and his recently completed screenplay and forthcoming novel.

Sources of Power Apr 22 2020 Anyone who watches the television news has seen images of firefighters rescuing people from burning buildings and paramedics treating bombing victims. How do these individuals make the split-second decisions that save lives? Most studies of decision making, based on artificial tasks assigned in laboratory settings, view people as biased and unskilled. Gary Klein is one of the developers of the naturalistic decision making approach, which views people as inherently skilled and experienced. It documents human strengths and capabilities that so far have been downplayed or ignored.

Since 1985, Klein has conducted fieldwork to find out how people tackle challenges in difficult, nonroutine situations. *Sources of Power* is based on observations of humans acting under such real-life constraints as time pressure, high stakes, personal responsibility, and shifting conditions. The professionals studied include firefighters, critical care nurses, pilots, nuclear power plant operators, battle planners, and chess masters. Each chapter builds on key incidents and examples to make the description of the methodology and phenomena more vivid. In addition to providing information that can be used by professionals in management, psychology, engineering, and other fields, the book presents an overview of the research approach of naturalistic decision making and expands our knowledge of the strengths people bring to difficult tasks.

Chalcidoidea of Iran Feb 13 2022 The superfamily Chalcidoidea (Insecta, Hymenoptera) contains in excess of 26,000 described species worldwide, but with an estimated total diversity of more than 500,000 species the vast majority of species have yet to be discovered and described. Most chalcidoid species are parasitoids of hosts in at least 12 different insect orders, attacking the egg, larval or pupal

stages, though phytophagy and other life cycles and hosts are known. Iran is the 18th largest country in the world and has a rich and diverse insect fauna, including Chalcidoidea. It is extremely interesting from a biogeographic point of view, and a paradise for an entomologist. This book summarizes the results of all prior research concerning species diversity of Iranian Chalcidoidea, including host records and distribution records by province in Iran as well as world distribution by country for 1,351 species of Chalcidoidea recorded from Iran through the end of 2019.

*Final Days* May 16 2022 But this new mode of transportation comes at a price and there are risks. Saul Dumont knows this better

than anyone. He's still trying to cope with the loss of the wormhole link to the Galileo system, which has stranded him on Earth far from his wife and child for the past several years. Only weeks away from the link with Galileo finally being re-established, he stumbles across a conspiracy to suppress the discovery of a second, alien network of wormholes which lead billions of years in the future. A covert expedition is sent to what is named Site 17 to investigate, but when an accident occurs and one of the expedition, Mitchell Stone, disappears – they realise that they are dealing with something far beyond their understanding. When a second expedition travels via the wormholes to Earth in the near future of 2245 they discover a devastated, lifeless solar system - all except for one man, Mitchell Stone, recovered from an experimental cryogenics facility in the ruins of a lunar city. These are about to target the Stations with a wave of destruction – and nearby worlds will suffer the same fate. One Station orbits the distant planet Kaspar, now occupied by scientists and armed militia who monitor life on the surface. Here, ignorant of our existence, the only known sentient species other than humankind is slowly evolving. But things are about to change. As devastation sweeps the galaxy, Kaspar's mysterious 'Citadel' may be key to repelling this threat. But at what cost to its native inhabitants – and its human guardians?

destructive capabilities. But the Bandati now have this information, and they will use it for profit. Dakota realises, to her shock, that the Shoal may therefore hold the Galaxy's best chance for peace. Forging an alliance with Trader, a Shoal-member, she's determined to prevent the Bandati's deadly knowledge from reaching the Emissaries. Yet despite her efforts, a nova war now seems inevitable – a war that will destroy millions of inhabited worlds.

The Quantum Thief Feb 19 2020 The Quantum Thief is a dazzling hard SF novel set in the solar system of the far future - a heist novel peopled by bizarre post-humans but powered by very human motives of betrayal, revenge and jealousy. *Creation and Cosmos - The Literal Values of Genesis* Nov 29 2020 There are many questions that intelligent people have about the Bible, science and evolution theory. Finding intelligent answers is difficult. The problem is that specialization is required in the sciences, in philosophy and theology, so people tend to pick one and disregard the others. There aren't so many people that consider all three fields with much depth of understanding. I made a try at that and wrote a book that is free to download. It is not only difficult to understand all three fields, it is difficult to select what should be written about, and difficult to write well. I didn't by any means cover everything; there is lots to cover.
