In recent years, the use of Web-mediated digital technologies has constantly grown in importance, reshaping the communication landscape in all professional activities. Web 2.0 applications and platforms have evolved dramatically, exceeding all expectations, and have had an impact on all areas of activity, from personal and social to political and economic. A crucial role in this radical transformation has been played by social media, i.e. online resources enabling users to connect, interact, and share contents. They have changed social relations profoundly on an individual level, but also in their professional dimensions, transforming the dynamics of how professionals work, share knowledge and relate to each other and to their clients. This book explores online professional blogging and networking platforms, discussing methodological issues involved in analysing webmediated professional communication in a genre- and discourse- analytical perspective, with a focus on the structural and textual properties of genres on the Internet. The discursive objects investigated include professional weblogs, and in particular law blogs, professional groups on Facebook and LinkedIn, and LinkedIn job ads. Among the aspects examined are continuity with pre-existing traditional genres, generic integrity, and the debated status of social networking sites as platform users' communities of practice.

"When Tony Campbell, aged 75, asked the Council of Jesuit Theological College for Emeritus status and retirement from JTC, both were granted most graciously, along with a testimonial document which said in part: "His teaching has combined evocation and provocation in the best sense of those terms. He

has mentored research students with scholarly exactitude and personal care. He has published books of the highest scholarly quality, of engaging readability, and of passionate conviction. When we at ATF were considering asking him for a volume of Collected Works or Selected Writings, we were well aware that published books of the highest scholarly quality were likely to be found on the shelves of libraries and of specialised academics, but not with students and others generally interested. There may be a dozen or more of Tony's books on the list from Amazon.com booksellers, along with another two or three that are not listed there. But most are heavy-duty specialist works, not easily accessible even to the educated public. We were equally well aware that there was a surprising number of essays and articles scattered in journals and proceedings of conferences that were, because of the scattering, often just as inaccessible. We thought that a collection of these in a single volume would be of great value to those interested. In the Introduction to this volume, Father Campbell has gone into some detail about the contents. Suffice for us to say that Job and the issues associated with suffering concern us all, that the interplay of history and narrative is a constant in the understanding of much biblical text, and that the nature of the Bible and its role in our lives is a major concern for most thinking Christians. While Father Campbell's focus is on the Older Testament, pondering what he looks at throws light on much of the Newer Testament as well. The writings Tony Campbell has pulled together in this single volume address significant issues within the readable length of an article or a talk. Addressed originally to thinking people, we at ATF believe they are likely to be of interest to a wide audience." An introductory text in graph theory, this treatment covers primary techniques and includes both algorithmic and theoretical problems. Algorithms are presented with a minimum of advanced data structures and programming details. 1988 edition. Find the Job You Want . . . Today!
