The Global Korean Motor Industry Dec 13 2021 This book examines the experiences of the globalizing Korean automobile industry, with particular focus on the Hyundai Motor Company (HMC), one of the most prominent of the new Korean multinational corporations. It provides an overview of the changing nature of the global automobile industry, before considering in depth the globalization processes that the Korean automobile industry has undertaken. Tracing the development of HMC as it recovered from the failure of its first venture overseas, in Canada, and tried again in India, the authors explore the similarities and differences between the practices which HMC implemented in India and Korea. They highlight the importance of production systems and employment relations as part of HMC's growth, and argue that if Korean companies such as HMC are to compete successfully as global automobile producers they will need to increase the proportion of overseas production, establish global supply chains and improve co-ordination between head

office and subsidiaries. Based upon extensive fieldwork in India and Korea, this book is a detailed account of the globalization of the Korean automobile industry and Hyundai Motor Company. Its findings will be of importance to all those who seek to understand the challenges faced by firms that attempt to become global players.

How to Build Max-Performance Mitsubishi 4g63t Engines Nov 12 2021

The photos in this edition are black and white. Mitsubishi's 4G63t engine is among the most powerful engines ever in the sport-compact world. It's not uncommon to find one of these four-cylinder, iron-block, aluminum-headed, 2-liter turbocharged monsters making more than 1,000 horsepower with the right modifications and tuning - well above the 200-300 hp produced in the factory-made engines. Bolted into such cars as the Mitsubishi Lancer Evolution, Eclipse, and Galant, and the Eagle Talon and Plymouth Laser, the 4G63t has more than a cult following among sport-compact enthusiasts, who know and respect this engine's immense performance potential at the track or on the street. Up until now, in-depth performance information on the 4G63t has been hard to find. For this book, author Robert Bowen went straight to the source,

Robert Garcia of Road/Race Engineering in Santa Fe Springs, California. RRE is the most well-known and respected Mitsubishi turbo performance shop in the United States, and Garcia is its in-house engine builder. Mitsubishi enthusiasts will benefit from Garcia's expertise and be able to build better, stronger engines than ever before. "How to Build Max-Performance Mitsubishi 4G63t Engines" covers every system and component of the engine, including the turbocharger system and engine management. More than just a collection of tips and tricks, this book includes a complete history of the engine and its evolution, an identification guide, and advice for choosing engine components and other parts. Profiles of successful built-up engines show the reader examples of what works, and the book includes helpful guidance for choosing your own engine building path.
