**Life: A User's Manual** Mar 23 2020 How should I live? What is my purpose? Can I find happiness? Ever felt as though life would be simpler if it came with an instruction manual? There are no easy answers to the big questions. And life does not follow a straight path from A to B. Since the beginning of time, people have asked questions about how they should live and, from Ancient Greece to Japan, philosophers have attempted to solve these questions for us. The timeless wisdom that they offer can help us to find our own path. In this insightful, engaging book, renowned existential psychotherapist and philosophical counsellor Antonia Macaro and bestselling philosopher Julian Baggini cover topics such as bereavement, luck, free will and relationships, and guide us through what the greatest thinkers to ever walk the earth have to say on these subjects, from the Stoics to Sartre. Discover advice from the world's greatest thinkers on questions like: Is there a right way to grieve? What is free will? How can we learn from past mistakes? Do we make our own luck?

Engineering the Space Age Nov 30 2020 Few people have experienced as much aerospace history as Bob Brulle (Lt. Col. Robert V. Brulle, USAF, Ret.), and fewer still possess his meticulous recall and research skills. The P-47 fighter pilot turned engineer, inventor, educator, and author found himself immersed in the Cold War race to the moon, developing cutting-edge technology, instructing future astronauts in aerodynamics and orbital mechanics, perfecting high-performance fighter aircraft to meet the Soviet challenge, overseeing the procurement of new weapon systems, and exploring alternative energy sources. In this book, he shares his unique personal insights into the triumphs and tragedies of one of the most exciting eras in American history.

**Design Solutions for User-Centric Information Systems** Aug 28 2020 Continuous improvements in technological applications have allowed more opportunities to develop systems with user-focused designs. This not only leads to higher success in day-to-day usage, but it increases the overall probability of technology adoption. Design Solutions for User-Centric Information Systems provides a comprehensive examination of the latest strategies and methods for creating technological systems with end users as the focal point of the design process. Highlighting

innovative practices and applications across a variety of areas, such as cloud-based computing services, e-government adoption, and logistics evaluation, this book is an ideal reference source for computer engineers, practitioners, project managers, graduate students, and researchers interested in the enhancement of user-centric information system development.

**Six-degree-of-freedom Flight Loads Simulation Program (fortran). Part II. User's Manual** May 25 2020 The manual is intended to give sufficient information so that any loads engineer can use the Six-Degree-of-Freedom Flight Loads Simulation Program. General information on how to set up a deck and submit a run is given. Explanations are made of the option card and the options available, the control card, and configuration data. Diagnostics which may result from input errors are explained. A checklist, which one might find helpful while assembling a deck to submit a run, is included.

**The Associational Counter-Revolution: The Spread of Restrictive Civil Society Laws in the World's Strongest Democratic States** Apr 04 2021 In an increasing number of countries around the globe, representing all regime types, in all regions, with all levels of economic and military strength, civil society's autonomy from the state, its defining feature, is diminishing. While a variety of tools are used to restrict civil society organizations' (CSOs) independence from the state, an increasingly popular and dangerously effective vehicle for accomplishing this goal is the law. Through the passage of legislation that imposes new restrictions on the ability of CSOs to operate free from excessive government scrutiny and control, governmental actors are gaining greater control over the non-governmental sector and in ways that benefit from the veneer of legality. Perplexingly, such laws are not only appearing in countries where they might be expected – Azerbaijan, Burundi, China, Egypt, Ethiopia, Russia, Zimbabwe, and countries throughout the Middle East. Indeed, they are increasingly appearing in democratic states too, including strong, fully consolidated democratic states with historically strong and independent civil society sectors: Canada, India, New Zealand, Spain, Israel, Hungary, Poland, and the US, to name just a few. Restrictive CSO laws, which are unsurprising in authoritarian-leaning states, are uniquely puzzling in the context of democratic ones, which have been the primary defenders, funders, and champions of a robust and independent civil society. This book explores this concerning and intriguing phenomenon by documenting its full scope and spread within the world's strongest democratic states and attempting to explain its occurrence. Using a combination of mixed methods – theory, process tracing, interviews, and statistical analysis – this timely analysis helps to shed light on a global phenomenon that seems to be fueling the democratic backsliding visible in an increasing number of democracies throughout the world. This exploration, which bridges comparative and international law, international relations, democratic theory, and state-civil society relations, attempts to make sense of this global contagion, the closing space phenomenon, which threatens to undermine one of cornerstones of any democracy – a free and independent civil society – in the years and decades ahead.

*Counterfactualism in the Fine Arts* Jun 25 2020 Counterfactual thinking has become an established method to evaluate decisions in a range of disciplines, including history, psychology and literature. Elke Reinhuber argues it also has valuable applications in the fine arts and popular media. A fascination with the path not taken is a logical consequence of a world saturated with choices. Art which provokes and explores these tendencies can help to recognise and contextualise the impulse to avoid or endlessly revisit individual or collective decisions. Reinhuber describes the term in broad strokes through the disciplines to show how counterfactualism finds shape in contemporary art forms, especially in photography, film, and immersive and interactive media art (such as 360° content, virtual reality and augmented reality). She analyses the different stages of counterfactuals with examples where artists experience counterfactual thoughts in the process of art production, explore these thoughts in their artwork, and where the artwork itself evokes counterfactual thoughts in the audience. A fascinating exploration for scholars and students of art, media and the humanities, and anybody else with an interest in choices, the art of decisionmaking and counterfactualism.

*Renew V3.2 User's Manual, Maintenance Estimation Simulation for Space Station Freedom Program* Dec 12 2021 RENEW is a maintenance event estimation simulation program developed in support of the Space Station Freedom Program (SSFP). This simulation uses reliability and maintainability (R&M) and logistics data to estimate both average and time dependent maintenance demands. The simulation uses Monte Carlo techniques to generate failure and repair times as a function of the R&M and logistics parameters. The estimates are generated for a single type of orbital replacement unit (ORU). The simulation has been in use by the SSFP Work Package 4 prime contractor, Rocketdyne, since January 1991. The RENEW simulation gives closer estimates of performance since it uses a time dependent approach and depicts more factors affecting ORU failure and repair than steady state average calculations. RENEW gives both average and time dependent demand values. Graphs of failures over the mission period and yearly failure occurrences are generated. The averages demand rate for the ORU over the mission period is also calculated. While RENEW displays the results in graphs, the results are also available in a data file for further use by spreadsheets or other programs. The process of using RENEW starts with keyboard entry of the R&M and operational data. Once entered, the data may be saved in a data file for later retrieval. The parameters may be viewed and changed after entry using RENEW. The simulation program runs the number of Monte Carlo simulations requested by the operator. Plots and tables of the results can be viewed on the screen or sent to a printer. The results of the simulation are saved along with the input data. Help screens are provided with each menu and data entry screen. Bream, Bruce L. Glenn Research Center

**Intellectual Freedom Manual, Ninth Edition** Jan 25 2023 Since it was established in 1967, ALA's Office for Intellectual Freedom (OIF) has championed the rights of library users to seek and receive information on all subjects from all points of view without restriction and without having the subject of one's interest examined or scrutinized by others. The new edition of the Intellectual Freedom Manual is more than just an

invaluable compendium of guiding principles and policies. It's also an indispensable resource for day-to-day guidance on maintaining free and equal access to information for all people. Fortifying and emboldening professionals and students from across the library spectrum, this manual includes 34 ALA policy statements and documents, 17 new or updated for this edition, addressing patron behavior, internet use, copyright, exhibits, use of meeting spaces, and other common concerns. At-a-glance lists summarizing key issues such as access, challenges and censorship, access by minors to controversial materials, and advocacy. Explanations of legal points in clear, easy-to-understand language, alongside case citations. Numerous checklists to help readers stay organized. A glossary and selected bibliography. This must-have tool will help librarians ensure that institutions of all kinds remain beacons of intellectual freedom.
