"Allergy & Clinical Immunology International--Journal of the World Allergy Organization, Supplement 2, 2007." This book, based on a recent German publication, offers an overview of basic data and recent developments in the groundbreaking field of molecular allergology. It comprehensively explores the

origin and structure of single allergen molecules ("components") and their utility in improving the management of type I, IgE-mediated allergic reactions and disorders like allergic respiratory diseases, food allergies, and anaphylaxis. Highly specific testing, called component-resolved diagnostics, aims to identify and utilize single molecules. Over 200 single allergens from plant or animal sources have been applied to single or multiplex laboratory testing for the presence of allergen-specific IgE. This leap in assay sensitivity and specificity has led to three major advances in patient management: discrimination between

primary allergic sensitization and complex cross-reactivity, recognition of IgE profiles for certain allergens and identification of patients most likely to benefit from allergen-specific immunotherapy. The book discusses in detail the benefits and limitations of this 21st century technology, and offers suggestions for the use of molecular allergology in routine clinical practice. It is a "must read" for physicians treating allergic patients as well as scientists interested in natural allergic molecules and their interactions with the human immune system. The analysis and sorting of large numbers of cells with a fluorescence-activated cell

sorter (FACS) was first achieved some 30 years ago. Since then, this technology has been rapidly developed and is used today in many laboratories. A Springer Lab Manual Review of the First Edition: "This is a most useful volume which will be a welcome addition for personal use and also for laboratories in a wide range of disciplines. Highly recommended." Although allergic diseases are well-known for almost two hundred years, their prevalence has increased dramatically over the last decades. Allergic reactions manifest in various organs, most commonly in the skin and mucous membranes, the frontier surfaces where the

contact between the individual and the environment takes place. In a very concise and practical way this book covers all aspects of allergic reactions from pathophysiology to diagnosis, therapy and prevention with a strong focus on relevant aspects for the everyday work of the practising dermatologist and allergist in the hospital or office. This book reflects the rich personal experience of a German allergist with international training and reputation, who is active in immunology and allergy research and practice for almost 30 years. In this book, not only IgE-mediated allergic reactions are covered but all other kinds of allergies

such as atopic eczema, contact dermatitis, drug eruptions, anaphylaxis and food allergies are equally represented as well as psychosomatic aspects and problems of environmental intolerances. Food allergy has increased over the past two decades, with a larger number of patients presenting a myriad of related symptoms and illnesses to physicians and allied health professionals. The growing number of patients poses a challenge to health care providers and confirms the need for developing best clinical practice guidelines. Based on the Exp September 07-08, 2017 Edinburgh, Scotland Key Topics : Asthma, Skin Allergy, Drug Allergy,

ENT Allergy, Food Allergy, Clinical Immunology & Allergy, Asthma: Immunopathology, Pediatric Allergy, Asthma & immunology, Ocular Allergy, Gastrointestinal immunology and allergy, Infection and Allergy, Allergy Prevention, Risk Factors & Treatment, Allergy Diagnosis & Medicine, Biologics of Asthma, Veterinary Allergology, Primary Immunodeficiency, Immunotherapy, Biomarkers for Allergy, Asthma & Clinical Immunology, Ethical Rules for Allergy , Asthma & Clinical Immunology, The prevalence of allergic diseases has increased dramatically over recent decades, both in terms of the number of sufferers and the

number of allergies. This is a trend that has frequently been referred to as 'the epidemic of the 21st century'. As described in ancient texts, allergies have been known for over 2,000 years, but the term 'allergy' was only coined at the beginning of the 20th century when doctors began to understand their pathophysiological basis. This book presents a detailed and varied historical overview of the field of allergology. Beginning with insights on allergy from antiquity to the 20th century and the development of the associated terminology, it compiles historical reflections on the understanding of the most

common allergic diseases. Important milestones in the discovery of mechanisms of allergy are described, followed by historical accounts of the detection of allergens such as pollen, dust mites, peanuts and latex, and of environmental influences such as pollution and the relationship between farmers and their environment. Several chapters illustrate the progress made in allergy management to date. Particular highlights of this book are the personal reflections of and interviews with a number of pioneers of allergy, including F. Austen, J. Bienenstock, K. Blaser, A. de Weck, A.W. Frankland, K. Ishizaka, and many more. Concluding with

portrayals of allergy societies and collections, as well as being supplemented by two films, this book represents a veritable treasure trove of fascinating and richly illustrated information. Not only researchers, physicians and medical historians, but also students and even non-scientists will find *History of Allergy* a scientific adventure well worth reading. The present Edition "*Allergic diseases - highlights in the clinic, mechanisms and treatment*" aims to present some recent aspects related to one of the most prevalent daily clinical expression disease. The effort of a group of outstanding experts from many countries

reflects a set of scientific studies very promising for a better clinical care and also to the treatment and control of the allergy. This book provides a valuable reference text in several topics of the clinical allergy and basic issues related to the immune system response. The inflammatory reaction understanding in allergic disease is clearly evidenced, as well as new strategies for further researches. Food allergy is an adverse immunological reaction to allergens present in food. Up to 4% adults and 8% children are affected by food allergy. The increase in allergic diseases to food has led to the need for better diagnostics and

more effective therapeutic approaches. This book describes the molecular biology and immunology of major food allergens, from laboratory based science to clinical immunology, encompassing novel characterisation and quantification methods, the application of recombinant food allergens in molecular diagnosis and the development of novel therapeutics. This book is the ideal reference tool for researchers, students and allergy clinicians to accurately diagnose and manage food allergies. Allergy and Allergen Immunotherapy: New Mechanisms and Strategies is a valuable and comprehensive book that covers allergy and

causative allergens and provides diagnostic and therapeutic aspects as well. With chapters from internationally recognized experts in the field, the book provides a balanced approach to enumerating pollen allergens as well as allergy diagnosis and therapeutic management and safety assessment of genetically engineered food allergens. The book features a special section on allergic diseases and allergens from tropical countries, including such countries such as India, Sri Lanka, Iran, and South Korea, giving the book a global appeal. The book is broken in the following sections:

Epidemiology, Pathophysiology, and Diagnosis of Allergy  
Aerobiology and Allergic Diseases  
Pollen Allergy in the Tropics and Temperate Regions  
Allergy in Children  
Food Allergy Evaluation  
Allergen Immunotherapy and Anti IgE  
The book deals not only on basics of allergy and allergen immunotherapy but also discusses indoor environments and safety considerations of genetically modified food allergens. The first of its kind volume from the Indian subcontinent that caters to the needs of clinicians, aerobiologists, environmentalists, and regulatory agencies as well, the volume will be of immense

interest for clinicians and patients of allergy as well as diagnostic and therapeutic management of allergy in tropics. clinical and experimental Immunology Notebook, Diary, 6"x9" Blank Lined Pages, 120 Pages. Allergy is a main problem of public health in the world. Many people in all countries are suffering from this problem. Some diseases (i.e. allergic rhinitis, allergic asthma, food allergy, urticaria, eczema, etc.) have allergic reaction pathophysiology, and with control of allergic mechanisms, these diseases can be

controlled and cured. The current book entitled Allergen has focused on allergy, mechanism, diagnosis, treatment, and other related problems. Chapters of the book have good data on allergy-based medical sciences and would be a benefit for all researchers in immunology, allergy, and asthma fields. Current discussions would be useful for prevention, diagnosis, treatment, and follow-up of atopic patients. We hope these chapters could be a new approach in immunotherapy of allergic diseases and help in the progress of healthy system. Issues in Allergy and Asthma Research and Treatment: 2012
