For courses in Lifespan Development. An introduction to developmental science that focuses on applications and research Lifespan Development provides a thorough overview of developmental science, with a focus on helping students apply their understanding of development to their own lives. With a down-to-earth writing style and an emphasis on how concepts connect to research, authors Denise Boyd and Helen Bee make abstract theoretical material understandable to students. In addition to updated content and the latest research, the 8th Edition includes revised themed essays, each with accompanying journaling activities, that offer opportunities to engage deeply with concepts. For courses in Human Development Exploring Lifespan Development, 4th Edition, the shorter, essentials version of Development Through the Lifespan, 7th Edition, covers the same topics and contains the same number of chapters, but presents only the essential information, with an exceptionally strong emphasis on applications. Exploring Lifespan Development also includes all the great features Berk's texts are known for -- an engaging writing style, exceptional multicultural and cross-cultural focus, rich examples, the most up-to-date research, and practical applications that help students relate the subject to their personal and professional lives. Note: You are purchasing a standalone product; REVEL does not come packaged with this content. Students, if interested in purchasing this title with REVEL, ask your instructor for the correct package ISBN and Course ID. Instructors, contact your Pearson representative for more information. Lifespan Development, 6ce provides strong applications, and integrated learning objectives and assessment. Students who want to know "What does current research say?" and "Why is this important?" will appreciate both the applied nature of this text and the clarity and rigor of the authors' presentation of current research. An exceptional pedagogical package that ties the textbook to online REVEL study tools complements the student-centered approach of the book and offers students the benefit of frequent self-assessment. LIFE SPAN DEVELOPMENT: A CASE BOOK uses lively, contemporary case studies to illustrate development transitions and challenges in every stage of life. The authors have chosen these cases for their ability to fascinate, engage, and stimulate. Together with thought-provoking questions for analysis, the case studies create a learning experience that helps readers use multiple perspectives to analyze and interpret life events. Recipient of the 2017 Most Promising New Textbook Award from the Textbook & Academic Authors Association (TAA) Chronologically organized, Lifespan Development: Lives in Context offers a unique perspective on the field by focusing on the importance of context—examining how the places, sociocultural environments, and ways in which we are raised influence who we become and how we grow and change. Author Tara L. Kuther integrates cutting-edge and classic research throughout the text to present a unified story of developmental science and its applications to everyday life. Robust pedagogy, student-friendly writing, and an inviting design enhance this exciting and inclusive exploration of the ways in which context informs our understanding of the lifespan. The combined features that distinguish this text from other titles can be summarized with an acronym: CARE C utting edge research A pplied developmental science R eadability E ssential knowledge Written by respected child, adolescent, and adulthood development experts, this authoritative and chronologically organized text presents an integrated perspective on lifespan development. The authors write in an engaging manner, synthesizing biological, social, cultural, and socioeconomic influences as opposed to organizing content around developmental themes. Incorporation of classic and cutting-edge research includes extensive coverage of new research in developmental neuroscience, which has transformed the study of lifespan development by introducing brain maturation. At the same time, the text emphasizes the application of developmental psychology to real world problems, focusing on the ways in which knowledge of child development can inform social policy and practice in the fields of child care, education, mental health, and family life. The text also examines the many fascinating changes that take place through adulthood to help students answer the important question: Who will I become tomorrow? And with a separate epilogue that focuses on death and dying, the book takes students on a developmental journey from our first breath to our last. Reflecting the authors' combined expertise, the broad array of real-life examples resonate with students from different backgrounds and fields of study, and with different occupational goals in mind. With its distinctive and effective combination of cutting-edge research, applications, readability, and essential knowledge, this text helps students understand and appreciate what today's scientists are discovering about human development across the lifespan, how they study the process, and how this knowledge can be used to improve the lives of infants, children, adolescents, and adults around the world. A brief, topical overview of life span development **Life Span Development: A Topical Approach** helps students to see the "big picture" of development across the entire life span. Throughout this brief version of his hallmark text **Development Across the Life Span**, author Robert Feldman employs a modular framework that offers instructors maximum flexibility to teach the course however they envision. Concise coverage of all key principles helps instructors cover the whole of the field within a standard term, while a topical approach makes it easier for students to understand the scope of development within particular areas (such as social or personality development) across the entire life span. Thoroughly updated with the latest data and contemporary examples, the Third Edition helps students to better see the relevance of developmental science. Also available with MyPsychLab® This title is also available with MyPsychLab — an online homework, tutorial, and assessment program designed to work with this text to engage students and improve results. Within its structured environment, students practice what they learn, test their understanding, and pursue a personalized study plan that helps them better absorb course material and understand difficult concepts. Students, if interested in purchasing this title with MyPsychLab, ask your instructor for the correct package ISBN and Course ID. Instructors, contact your Pearson representative for more information. **Life Span Development: A Topical Approach, Third Edition** is also available via REVEL™, an interactive learning environment that enables students to read, practice, and study in one continuous experience. Note: You are purchasing a standalone product; MyLab™ & Mastering™ does not come packaged with this content. Students, if interested in purchasing this title with MyLab & Mastering, ask your instructor for the correct package ISBN and Course ID. As the contributions make clear, action is an integrative concept that forms the bridge between our psychological, biological, and sociocultural worlds. Action is also integrative in the sense of entailing motivational, emotional, and cognitive systems, and this integration too is well represented in the chapters. Action is defined, and distinguished from behavior, according to its intentional quality. Thus, a constantly recurring theme in the volume involves the dialectic of action-intentionality, and specifically the questions of how and when these concepts are to be distinguished. Understanding developmental processes in the individual as well as in aggregates of individuals is an important aim of many of the social and behavioral sciences. This book presents a theoretical framework for this endeavor - an architecture for the study of human development across different disciplines. This architecture describes two major sources of human development (biology and culture) and posits three central developmental mechanisms (selection, optimization, and compensation). This book takes a scientific approach to the study of human development by exploring the chronology of a typical lifespan through research stories. The primary goal of this book is to help readers learn to be intellectually critical, by reading contemporary research literature on human development and evaluating the assertions that are made. Each of the 32 chapters is a separate research "story," telling why the study was done, what was done, and what the results tell us about development. For psychologists, educators, or anyone interested in human development or family studies. What are the changes we see over the life-span? How can we explain them? And how do we account for individual differences? This volume continues to examine these questions and to report advances in empirical research within life-span development increasing its interdisciplinary nature. The relationships between individual development, social context, and historical change are salient issues discussed in this volume, as are nonnormative and atypical events contributing to life-span change. Lifespan human development is the study of all aspects of biological, physical, cognitive, socioemotional, and contextual development from conception to the end of life. In more than 800 signed articles by experts from a wide diversity of fields, this volume explores all individual and situational factors related to human development across the lifespan. The Encyclopedia promises to be an authoritative, discipline-defining work for students and researchers seeking to become familiar with various theories and empirical findings about human development broadly construed. Some of the broad thematic areas will include: Adolescence and Emerging Adulthood Aging Behavioral and Developmental Disorders Cognitive Development Community and Culture Early and Middle Childhood Education through the Lifespan Genetics and Biology Gender and Sexuality Life Events Mental Health through the Lifespan Research Methods in Lifespan Development Speech and Language Across the Lifespan Theories and Models of Development. Featuring signed articles by experts from the fields of child development, psychology, neuroscience, behavior analysis, education, sociology, and more, this five-volume encyclopedia promises to be an authoritative, discipline-defining work for students and researchers seeking to become familiar with the various approaches to and theories of human development as well as past and current research. Provides the most Support for Student Learning and Success **Lifespan Development, 7/e** by Denise G. Boyd and Helen L. Bee thoroughly and accessibly addresses the most critical concepts of development. Through their engaging writing style, the authors have made more abstract material about developmental theories approachable to students. Readers will appreciate both the applied nature of this title and the clarity of the authors' presentation of current research. Students will emerge from your course with a thorough understanding of developmental science and will be able to apply this understanding to their own lives. MyPsychLab is an integral part of the Boyd/Bee program. Engaging activities and assessments provide a teaching and learning system that will help students master life span development. New features include the updated MyPsychLab Video Series for Lifespan Development, which contains a rich assortment of video clips including sketchnote-style tutorials as well as cross-cultural footage and segments featuring real students

sharing their experiences. MyPsychLab also contains MyVirtualLife, an engaging variable-based simulation that allows students to experience lifespan development firsthand. This title is available in a variety of formats - digital and print. Pearson offers its titles on the devices students love through Pearson's MyLab products, CourseSmart, Amazon, and more. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version. Adolescenceâ€"beginning with the onset of puberty and ending in the mid-20sâ€"is a critical period of development during which key areas of the brain mature and develop. These changes in brain structure, function, and connectivity mark adolescence as a period of opportunity to discover new vistas, to form relationships with peers and adults, and to explore one's developing identity. It is also a period of resilience that can ameliorate childhood setbacks and set the stage for a thriving trajectory over the life course. Because adolescents comprise nearly one-fourth of the entire U.S. population, the nation needs policies and practices that will better leverage these developmental opportunities to harness the promise of adolescenceâ€"rather than focusing myopically on containing its risks. This report examines the neurobiological and socio-behavioral science of adolescent development and outlines how this knowledge can be applied, both to promote adolescent well-being, resilience, and development, and to rectify structural barriers and inequalities in opportunity, enabling all adolescents to flourish. Lifespan human development is the study of all aspects of biological, physical, cognitive, socioemotional, and contextual development from conception to the end of life. In approximately 800 signed articles by experts from a wide diversity of fields, The SAGE Encyclopedia of Lifespan Human Development explores all individual and situational factors related to human development across the lifespan. Some of the broad thematic areas will include: Adolescence and Emerging Adulthood Aging Behavioral and Developmental Disorders Cognitive Development Community and Culture Early and Middle Childhood Education through the Lifespan Genetics and Biology Gender and Sexuality Life Events Mental Health through the Lifespan Research Methods in Lifespan Development Speech and Language Across the Lifespan Theories and Models of Development. This five-volume encyclopedia promises to be an authoritative, discipline-defining work for students and researchers seeking to become familiar with various approaches, theories, and empirical findings about human development broadly construed, as well as past and current research. Work Across the Lifespan coalesces lifespan theoretical and lifespan-based empirical perspectives on aging and work. The book examines human development theories that explain patterns of growth, trajectories of change and maintenance of continuities across the entirety of life. Using the implicit focus of these theories on aging as a guide to intra-individual change and goal-based self-regulation processes, the book examines the relationship between work and aging. Drawing upon developmental psychology, life course sociology, microeconomics, and critical gerontology, this authoritative reference brings together the collective thinking of researchers who study aging and working, and aging and careers. Summarizes key tenets of lifespan theories Draws upon theories from work and organizational psychology, organizational behavior, and human resources management Applies theories to work, organizational life and careers Examines age and work-related processes Provides an exclusive lifespan focus on work and aging Focuses on aging as a continuous intraindividual change process Life-Span Developmental Psychology: Personality and Socialization presents papers on personality and socialization. The book discusses the history, theory, and psychological approaches of developmental psychology, with focus on socialization and personality development through the life span; personality dimensions; and theories of socialization and sex-role development. The text also describes the life-span perspective of creativity and cognitive styles; continuities in childhood and adult moral development revisited; and issues of intergenerational relations as they affect both individual soc. When a local context really makes the difference... The new edition of this original Australian text continues to offer the most balanced coverage of theory and research for Australian students and educators and appeals to students from many backgrounds. It covers the domains of development including neurological, cognitive, social, physical and personality. The text is organised chronologically by chapter. Within each chapter content is organised topically. This structure allows for a degree of flexibility and lecturers can choose the way they wish to approach the content, whether it is topically or chronologically. In the past fifty years, scholars of human development have been moving from studying change in humans within sharply defined periods, to seeing many more of these phenomenon as more profitably studied over time and in relation to other processes. The Handbook of Life-Span Development, Volume 2: Social and Emotional Development presents the study of human development conducted by the best scholars in the 21st century. Social workers, counselors and public health workers will receive coverage of the social and emotional aspects of human change across the lifespan. Case Studies in Lifespan Development offers students a comprehensive view into life's key developmental stages through unique, diverse, and moving cases. Author Stephanie M. Wright presents a series of 12 case studies shaped by the contributions of real students—including their observations, concerns, and moments of triumph—to build immersive examples that readers can relate to and enjoy. Key human development theories that continue to guide research and practice are examined in this engaging text. Ten key theories are grouped into three families - those that emphasize biological systems, environmental factors, and those that reflect an interaction between the two. This organization enhances students' ability to evaluate, compare, and contrast theories both within and across families. Each family is introduced with an overview of their unique perspectives and the rationale for grouping them together. Discussion of each theory includes the cultural/historical context during the theory's development, its key concepts and ideas, extensions of the theory in contemporary work, an example showing a modification of the theory, an application of how the theory is used to inform practice, and an analysis of how the theory answers 6 basic questions that a human development theory should address. Each chapter includes an overview of the strengths and weaknesses of the theories to facilitate comparisons. Theories that have a clear lifespan focus along with cases and examples that address issues across the lifespan are included. The second edition features: -A new chapter on bioecological theory that highlights the increased use of this theory in the development of family, school, and community intervention programs. -A new epilogue that examines the same case via each of the ten theories illustrating their similarities and differences and how these ideas cast a unique light on a common situation. -New opening cases that bring theory to life along with narrative that links the case to the chapter's concepts, guiding questions that help students compare theoretical perspectives, critical thinking questions that focus on using the theory to interpret the case and personal life experiences, and recommended resources that extend students' understanding. -More examples from various disciplines that address topics students are likely to encounter as professionals. -A new glossary that defines the boldfaced key terms. -Enhanced website at [www.psyppress.com/9781848726673](http://www.psyppress.com/9781848726673) that provides instructors with a test bank, Power points, discussion questions and activities, additional cases with questions, teaching notes for using the book with various types of majors, and a conversion guide outlining changes to the new edition and students with key terms with hot links to their definitions, chapter summaries and outlines, and additional resources for further study. -Updated research and applications highlight the latest scientific developments. Ideal for advanced undergraduate or beginning graduate courses in theories of development, lifespan or child development taught in psychology, human development, family studies, education, and social work. This encyclopedia brings together key established and emerging research findings in geropsychology. It is a comprehensive coverage of the entire breadth of the field, giving readers access to all major subareas and illustrating their interconnections with other disciplines. Entries delve deep into key areas of geropsychology such as perception, cognition, clinical, organizational, health, social, experimental and neuropsychology. In addition to that, the encyclopedia covers related disciplines such as neuroscience, social science, population health, public policy issues pertaining to retirement, epidemiology and demography and medicine. Paying careful attention to research internationally, it cites English and non-English empirical literature from around the globe. This encyclopedia is relevant to a wide audience that include researchers, clinicians, students, policy makers and nongovernmental agencies. This package contains the following components: -0205748597: Exploring Lifespan Development -0205777449: Study Guide for Exploring Lifespan Development K. Warner Schaie I am pleased to write a foreword for this interesting volume, particularly as over many years, I have had the privilege of interacting with the editors and a majority of the contributors in various professional roles as a colleague, mentor, or research collaborator. The editors begin their introduction by asking why one would want to read yet another book on human development. They immediately answer their question by pointing out that many developmentally oriented texts and other treatises neglect the theoretical foundations of human development and fail to embed psychological constructs within the multidisciplinary context so essential to understanding development. This volume provides a positive remedy to past deficiencies in volumes on human development with a well-organized structure that leads the reader from a general introduction through the basic processes to methodological issues and the relation of developmental constructs to social context and biological infrastructure. This approach does not surprise. After all, the editors and most of the contributors at one time or another had a connection to the Max Planck Institute of Human Development in Berlin, whether as students, junior scientists, or senior visitors. That institute, under the leadership of Paul Baltes, has been instrumental in pursuing a systematic lifespan approach to the study of cognition and personality. Over the past two decades, it has influenced the careers of a generation of scientists who have advocated long-term studies of human development in an interdisciplinary context. Lifespan Human Development 6/e offers a guidebook for students as they study the different phases of life. It weaves together multiple perspectives, research, practical applications, and a strong cultural context to help students understand the variability of life. Boxed inserts, which offer students a variety of perspectives, as well as updated coverage of important subjects such as genetics, attachment, Piaget, impact of school on development, media influences, cognitive changes in adulthood, family lifecycle models, elder care ethical dilemmas, and assisted suicides complement this great text. Features: \* Chapter 1 provides coverage of issues, theories and methods to help students understand the empirical side of development studies. \* Parts One through Seven cover physical, cognitive, personality and social development within a chronological framework. \* Cultural context is emphasized throughout the text providing readers with an appreciation of the importance and influence of culture on development. New to this edition: \* Extensive revision and updating reflects current issues and concerns. \* Chapter One has been extensively reorganized and refocused. \* Boxed inserts, which of Everything you always wanted to know about theories, meta-theories, methods, and interventions but didn't realize you needed to ask. This innovative textbook takes advanced undergraduate and graduate students "behind the curtain" of standard developmental science, so they can begin to appreciate the generative value and methodological challenges of a lifespan developmental systems perspective. It envisions applied developmental science as focused on ways to use knowledge about human development to help solve societal problems in real-life contexts, and considers applied developmental research to be purpose driven, field based, community engaged, and oriented toward efforts to optimize development. Based on the authors' more than 25 years of teaching, this text is designed to help researchers and their students intentionally create a cooperative learning community, full of arguments, doubts, and insights, that can facilitate their own internal paradigm shifts, one student at a time. With the aid of extensive online supplementary materials, students of developmental psychology as well as students in other psychological subdisciplines (such as industrial-organizational, social, and community psychology) and applied professions that rely on developmental training (such as education, social work, counseling, nursing, health care, and business) will find this to be an invaluable guidebook and toolbox for conceptualizing and studying applied problems from a lifespan

developmental systems perspective. "As a master teacher, John Santrock connects current research with real-world application, helping students see how developmental psychology plays a role in their own lives and future careers. Through an integrated learning goals system, this comprehensive and chronological approach to lifespan development helps students gain the insight they need to study smarter, stay focused, and improve performance." -- Provided by publisher. This thorough revision of the highly successful first edition of Life-Span Development offers the reader a wide-ranging and thought provoking account of human development throughout the lifespan. The lifespan approach emphasises that development does not stop when we cease to be adolescents but goes on throughout adulthood and into old age. In initial chapters Leonie Sugarman outlines the issues surrounding the notion of development and how it can be studied, including reviews of the work of key theorists Erikson, Levinson and Gould. She goes on to consider the different ways in which the life course can be construed: as a series of age-related stages; as a cumulative sequence; as a series of developmental tasks; as a series of key life events and transitions or as a narrative construction which creates a sense of dynamic continuity. A final chapter looks at how people cope, the resources that are available and the theoretical and practical issues regarding interventions to assist them in the process. New to this edition is increased coverage of the topical issue of successful ageing and a new chapter on the increasingly popular narrative approach to lifespan development. This edition is also more student-friendly with exercises in self-reflection that encourage the reader to look at the development of their own lives or those of their current or future clients. Boxed material highlighting major theories and clarifying concepts is also included. This book will be invaluable for students of developmental and occupational psychology and professionals in the fields of health management, education and social work. This multi-colored guide is created for both college students and psychology enthusiasts as it covers the fundamental concepts of developmental psychology.
