This comprehensive guide describes useful programs from more than 20 U.S. Government agencies that help U.S. companies export their goods and services to markets around the world. As many new and successful exporters have discovered, exporting can be an important source of growth, yet challenging. The information in this guide can ease this challenge by offering support and assistance you need to become a successful exporter. While the United States remains one of the most competitive and productive nations in the world, a relatively low percentage of U.S. companies are engaged in exporting compared to other developed nations. Although U.S. small and medium-sized companies with fewer than 500 employees make up about 97 percent of the U.S. exporting firms, they represent less than 30 percent of the value of U.S. exports or merchandise goods. Furthermore, nearly 60 percent of all exporters sell to only one foreign market. Many of these firms could boost U.S. exports by expanding into other markets. In fact, there has never been a better time to export. Increased use of the Internet, improved transportation, and enhanced trade and investment rules have greatly simplified the export process and made it easier to sell abroad. For most Americans, the savings and loan industry is defined by the fraud, ineptitude and failures of the 1980s. However, these events overshadow a long history in which thrifts played a key role in helping thousands of households buy homes. First appearing in the 1830s savings and loans, then known as building and loans, encourage their working-class members to adhere to the principles of thrift and mutual co-operation as a way to achieve the 'American Dream' of home ownership. This book traces the development of this industry from its origins as a movement of a loosely affiliated collection of institutions into a major element of America's financial markets. It also analyses how diverse groups of Americans, including women, ethnic Americans and African Americans, used thrifts to improve their lives and elevate their positions in society. Finally the overall historical perspective sheds new light on the events of the 1980s and analyses the efforts to rehabilitate the industry in the 1990s. In Part I, Concepts and Processes, chapters have been revised and updated to reflect new ideas and methods in the provision of reference service in an era when many users have access to the Web. In Part II, Information Sources and Their Use, discussion of each source type has been updated to encompass key resources in print and on the Web, where an increasing number of freely available sources join those purchased or licensed by libraries. A number of new authors are contributors to this new edition, bringing to their chapters their experience as teachers of reference and as practitioners in different types of libraries. Discussions of services in Part I integrate digital reference as appropriate to each topic, such as how to conduct a reference interview online using instant messaging. Boxes interspersed in the text are used to present scenarios for discussion, to highlight key concepts, or to present excerpts from important documents. Discussions of sources in Part II place more emphasis on designing effective search strategies using both print and digital resources. The chapter on selection and evaluation of sources addresses the changing nature of reference collections and how to evaluate new types of sources. Each chapter concludes with an updated list of additional readings to guide further study. A new companion website will provide links to Web-accessible readings and resources as well as additional scenarios for discussion and

example search strategies to supplement those presented in the text.
