Excerpt from A Text-

Book of Dental Pathology and Therapeutics: For Students and Practitioners In revising this work the Editor has borne in mind the original motive of its author, namely, the production of a text-book which may serve as a useful basis of instruction upon a subject which students find difficult to comprehend from lectures alone. To this end, while the original plan and arrangement of chapters have been in the main adhered to, no hesitancy has been felt in revising the text, which, with the exception of certain portions, has been rewritten in order that new material might be inserted in its proper place and bearings. Where material has been drawn from the work of others full credit has been accorded. The section on pharmacology has been omitted, and in its stead the remedial agents referred to in the text have been completely indexed, so that their uses may be studied without difficulty. The Editor desires here to express his thanks to the authors whose illustrations appear in the book and to the editors and publishers of the various dental journals and text-books from which they have been taken. In no instance has a request been denied. In consideration of the fact that acknowledgment is not manifest in the text, the Editor would thank the S. S. White Dental Manufacturing Company, the Dental Manufacturing Company, Limited (London), P. Blakiston, Son & Company, William Wood & Company, and the J. B. Lippincott Company, for cuts from text-books published by them. Thanks are also due to Lea Brothers & Company, from whom the Editor has received the most generous aid and who have spared no pains to comply with every desire. This book is a showcase celebration of the achievements of women dental professionals in the 100 years since (some) women first achieved the right to vote in the United Kingdom. Women dentists hold equal status as men within the profession, although there is some way to go before this is mirrored across dentistry as a whole. This volume will serve to provide inspiration to all dental professionals, men and women, regarding the many and varied opportunities dentistry provides. The women profiled are working (or have worked) in all aspects of dentistry, they are role models to all and are a credit to the profession. We can learn so much from each other, and the role of mentoring is an important underpinning thread that runs throughout the book and is highlighted in the career stories of each woman.
