Oceans were long thought to exist in all corners of the Solar System, from carbonated seas percolating beneath the clouds of Venus to features on the Moon's surface given names such as "the Bay of Rainbows" and the "Ocean of Storms." With the advent of modern telescopes and spacecraft exploration these ancient concepts of planetary seas have, for the most part, evaporated. But they have been replaced by the reality of something even more exotic. For example, although it is still uncertain whether Mars ever had actual oceans, it now seems that a web of waterways did indeed at one time spread across its surface. The "water" in many places in our Solar System is a poisoned brew mixed with ammonia or methane. Even that found on Jupiter's watery satellite Europa is believed similar to battery acid. Beyond the Galilean satellites may lie even more "alien oceans." Saturn's planet-sized moon Titan seems to be subject to methane or ethane rainfall. This creates methane pools that, in turn, become vast lakes and, perhaps, seasonal oceans. Titan has other seas in a sense, as large shifting areas of sand covering vast plains have been discovered. Mars also has these sand seas, and Venus may as well, along with oceans of frozen lava. Do super-chilled concoctions of ammonia, liquid nitrogen, and water percolate beneath the surfaces of Enceladus and Triton? For now we can only guess at the possibilities. 'Alien Seas' serves up part history, part current research, and part theory as it offers a rich buffet of "seas" on other worlds. It is

organized by location and by the material of which various oceans consist, with guest authors penning specific chapters. Each chapter features new original art depicting alien seas, as well as the latest ground-based and spacecraft images. Original diagrams presents details of planetary oceans and related processes. Packed with up-to-date astronomical data about the Solar System, our Galaxy and the wider Universe, this is a one-stop reference for astronomers of all levels. Full of facts and figures, this is the only book you need to look up data about astronomy. It is destined to become the standard reference for everyone interested in astronomy.

Munashe is a bright adolescent girl living in Zimbabwe. She feels a pressure to leave Zimbabwe and to follow most of her peers to a university or to work in the West. However, she is not convinced that this is what she really wants. Via Thomas, an experienced European scientist and manager, initiating a technical Start-up Hub at her boarding school, Munashe comes in contact with Anne.

Imwe imba - the other room - is a novel covering the last 2 high-school years of Munashe and Anne in letters between the young women as well as from Thomas to Simon, his now retired personal and business coach. Through the letters, Anne and Simon discover unknown and fascinating aspects of the (southern) African society. Especially, since Thomas

includes stories from Nelson, Munashe's grandfather and small holder farmer. Based on the stories and hearing about Munashe's activities in more technical projects, Anne develops a critical attitude towards both the current Western school system and the effectiveness of traditional Western development or aid projects. On the other side, Munashe learns that Europe is not the land of milk and honey for everybody. Munashe and Anne, assisted by Thomas, review the so-called development work activities in emerging markets and propose a promising approach to economically uplift more rural areas. In part 2, the Start-up Hub activities are proven to be sustainable and Munashe asks "where do we want to go?" A design is made for a more ideal (global) society and the issues faced, implementing their ideas, are discussed. The letters in this novel cover a wide spectrum of topics: personal struggles and contemplations, educational and business practices, science and art, geopolitics and historical backgrounds, change management as well as social developments. Each letter is written in an accessible language and underlined with references to allow the reader to explore more. Most of all, "imwe imba" wants to create awareness. Awareness for the wonderful, "real" life in Africa. Awareness that Africa is prosperity. Awareness that our younger generation is perfectly able to initiate change. That a single person can initiate change. That complaining or being upset about various (unacceptable) global happenings or actions is not enough. That a further polarisation and blaming "the others" doesn't help. That we have to do things. That we should not fear change but embrace the changes that are needed to come to the necessary improvements. Harper's

In this book, Patrick Norris responds to the 50th Anniversary of the dawn of the Space Age – the launch of Sputnik 1 – with a review of the most important historical applications of space science for the benefit of the human race during that half century, focusing on the prevention of nuclear war. In developing this story Norris illuminates a little-known aspect of the Space Age, namely the military dimension. A guide to the practice of planetary magic • Offers tools for practitioners of green magic and folk magic to incorporate astrology into their practice • Includes an extensive collection of magical remedies to resolve astrological afflictions • Provides information on creating planetary altars and the astrological correspondences of traditional pagan holidays Traditionally, magically oriented astrology has focused on Sun-sign horoscopes while modern Western astrology has focused on attempting to become as “scientific” as possible in hopes of aligning with its sister science of astronomy. In Pagan Astrology, Raven Kaldera, a practicing astrologer and Pagan shaman, uses the commonalities and strengths of Western astrology and Pagan green magic to introduce a hands-on astrological practice that incorporates intuition, spells, and other modes of folk magic into astrology. Kaldera includes an extensive compendium of modern magical remedies to counteract negative astrological influences and shows how to use planetary energy to aid Pagan worship and green magic practice through spell casting, love magic, and shamanic stargazing. Kaldera also explains how to create planetary altars that enhance the astrological correspondences of traditional Pagan holidays using the tools of folk magic. Practitioners of green and folk

magic and those who love traditional astrology will welcome this unique approach to planetary magic. Haynes offers the best coverage for cars, trucks, vans, SUVs and motorcycles on the market today. Freya Nakamachi-47 has some major existential issues. She's the perfect concubine, designed to please her human masters - hardwired to become aroused at the sight mere of a human male. There's just one problem: she came off the production line a year after the human species went extinct. Whatever else she may be, Freya Nakamachi-47 is gloriously obsolete. But the rigid social hierarchy that has risen in the 200 years since the last human died, places beings such as Freya very near the bottom. So when she has a run-in on Venus with a murderous aristocrat, she needs passage off-world in a hurry - and can't be too fussy about how she pays her way. If Venus was a

frying pan, Mercury is the fire - and soon she's going to be running for her life. Because the job she's taken as a courier has drawn her to the attention of powerful and dangerous people, and they don't just want the package she's carrying. They want her soul ... Excerpt from *How to Find the Stars: With Indications of the Most Interesting Objects in the Starry Heavens, and an Account of the Astronomical Lantern and Its Use* The Planets (from the Greek word meaning to which move among the fixed stars, cannot be represented on this Lantern. Nor is it necessary, since it is very easy to identify the principal planets: Venus, Jupiter, Mars, Saturn. Mercury is less easily perceived, but may sometimes be discovered just after sunset, in the western Sky, especially in 'march. Seen through a telescope, even of low power, Venus, Jupiter, and Saturn are very interesting Objects. Venus is Often seen as a brilliant crescent, especially when it is brightest. I once showed it to a working man, through my telescope, and he manifested no surprise. He thought he was looking at the moon. Jupiter, with his belts and four satellites, always arranged on a nearly straight line, is surprisingly beautiful. Saturn, hanging in the sky, with its marvellous ring, self-suspended, surrounding it, is always an Object of great interest. A telescope of low power shows these Objects to advantage. One minute, Rachel is taking a break from babysitting. The next, she's escaping the Earth on a pedal-powered interplanetary bus. It could happen to anybody. It could. Generally it doesn't, but it could. Because what Rachel soon learns is that Earth is infected with Math, which is why we look at our solar system and see freezing balls of ice, gas, and rock whirling lifelessly through a hostile void. Everyone else sees air pirates sailing the Seven Skies of Saturn, the endless exciting fight scenes of Mars, the sullen ghosts of Pluto, and much more. "More" including the Lighthouse of Ceres, the waypoint for all travelers of the solar system. That's where Rachel ends up, and where she finds out her hobbies of sketching and storytelling make her a genius at repairing Math-free spaceships. She loves it, and no one makes her reveal she's from the quarantined, much-feared

planet Earth. Instead they make up their own ideas of who she is and where she's from. Very dangerous ideas...
