**Direct Numerical Simulations of Gas–Liquid Multiphase Flows** Oct 14 2019 Accurately predicting the behaviour of multiphase flows is a problem of immense industrial and scientific interest. Modern computers can now study the dynamics in great detail and these simulations yield unprecedented insight. This book provides a comprehensive introduction to direct numerical simulations of multiphase flows for researchers and graduate students. After a brief overview of the context and history the authors review the governing equations. A particular emphasis is placed on the 'one-fluid' formulation where a single set of equations is used to describe the entire flow field and interface terms are included as singularity distributions. Several applications are discussed, showing how direct numerical simulations have helped researchers advance both our understanding and our ability to make predictions. The final chapter gives an overview of recent studies of flows with relatively complex physics, such as mass transfer and chemical reactions, solidification and boiling, and includes extensive references to current work.

Combat Squadrons of the Air Force; World War II. Jul 03 2021 This collection of squadron histories has been prepared by the USAF Historical Division to complement the Division's book, Air Force Combat Units of World War II. The 1,226 units covered by this volume are the combat (tactical) squadrons that were active between 7 December 1941 and 2 September 1945. Each squadron is traced from its beginning through 5 March 1963, the fiftieth anniversary of the organization of the 1st Aero (later Bombardment) Squadron, the first Army unit to be equipped with aircraft for tactical operations. For each squadron there is a statement of the official lineage and data on the unit's assignments, stations, aircraft and missiles, operations, service streamers, campaign participation, decorations, and emblem.

*The Book of the Villiers Engine - A Complete and Fully Illustrated Instruction Manual on the Construction, Running, and Repair of Villiers Engines - Pitman's Motor Cyclists Library* Jul 23 2020 Many of the earliest books, particularly those dating back to the 1900's and before, are now extremely scarce and increasingly expensive. We are republishing these classic works in affordable, high quality, modern editions, using the original text and artwork.

**Life to Those Shadows** May 01 2021 Noel Burch's new book is a critique of the assumptions underlying 'classical' approaches to film history: the assumption that what we call the language of film was a natural, organic development, that it lay latent from the outset in the basic technology of the camera, waiting for the prescient pioneers to bring it into being; and the assumption that this language was a universal, neutral medium, innocent of any social or historical meaning in itself." "His major thesis is that, on the contrary, film language has a social and economic history, that it evolved in the way it did because of when and where it was constructed -- in the capitalist and imperialist west between 1892 and 1929." "The book examines the chronology of the emergence of what it defines as cinema's Institutional Mode of Representation and the socio-historical circumstances in which this took place. It examines the principles of visualisation -- camera placement and movement, lighting, editing, mise-en-scene -- that film-makers and audiences came to internalize over the first three decades. Special emphasis is laid on the allimportant change that occurred in the imaginary placing of the spectator, from a position of exteriority to the film image, implicit in both film-form and viewing conditions during the primitive era (pre-1909), to the imaginary centering of the spectator-subject, completed only with the generalisation of lip-synch sound after 1929. It is the contention of this book that this imaginary centering of a sensorily isolated spectator is the keystone of the cinematic illusion of reality, still achieved today by the same means as it was sixty years ago.

Light Alloys Aug 24 2020 Light Alloys Directory and Databook is a world-wide directory of the properties and suppliers of light alloys used in, or proposed for, numerous engineering applications. Alloys covered will include aluminium alloys, magnesium alloys, titanium alloys, beryllium. For the metals considered each section will consist of: a short introduction; a table comparing basic data and a series of comparison sheets. The book will adopt standardised data in order to help the reader in finding and comparing different materials and identifying the required information. All comparison sheets are cross-referenced, so that the user will be able to locate data on a specific product or compare properties easily. The book is designed to complement the existing publications on high performance materials.

**Grey Funnel Lines** Jan 17 2020 Originally published in 1987. In this book we find songs reflecting every aspect of life in the twentieth-century Royal Navy, both upper and lower deck: war, ship's routine, aviation, submarines, the antics of dockyard personnel, not to mention the matelot's shore-going adventures, both amorous and bibulous. The compiler was well-known as a folk-singer, though he began his career in the Royal Navy. Based on his personal collection of Navy songs, this book proves that the sailor's muse did not desert him with the passing of the sailing ship. It also dispels the notion that the modern Jack Tar, when he produces any songs at all, confines himself to the pornographic. With the songs, Cyril Tawney interweaves a commentary on the Royal Navy setting, providing a backdrop to the sailor's own words. This book is of enduring appeal to all who have served as well as to students of twentieth-century oral tradition.

*Thunder And Lightnings* Jan 29 2021 When Andrew's family moves house, he strikes up an unexpected friendship with his neighbour Victor. There isn't a thing Victor doesn't know about the RAF planes flying overhead and the two boys are soon busy tracking their movements. Then Andrew discovers that Victor's beloved Lightnings are due to be scrapped... Thunder and Lightnings won the Carnegie Medal in 1976.

**Recent advances of research in antinutritional factors in legume seeds and oilseeds** Jun 21 2020 This series of meetings bring together experts working in this field of Science from throughout the world. A major feature of each conference session is an invited review, which outlines the advances that have been made in a particular area since the last meeting. A major factor that was considered at this meeting was the likely impact of plant genetic modification on the nutritional quality of their seeds for human and animal feeding. As an example already a number of legume species and rapeseed have been modified to improve the sulphur amino acid content of their seed and thus their protein quality. Besides the major grain legume species and rapeseed that had been discussed at previous meetings in this series number of crop products, as potential protein sources, for animal feeding, were considered for the first time. These included cottonseed meal, linseed meal, and sunflower seed meal. The potential of some new exotic crops from Mexico was also covered including Mexican species of the genus *Lupinus* and a Mexican plant from the same family as castor bean, which has a very high oil content but is usually toxic. Work from Cuba compared the nutritional characteristics of soybean with a range of tropical grain legume species, which have received little previous attention. A major change at this meeting was the greater consideration of the effects, both positive, and negative, of the consumption of these seeds for human nutrition. A major review on the development of allergenicity to legume seed in humans is included. There was also consideration of the potential role of antinutritional factors in reducing the growth of various types of tumour cells. The presented papers also suggest that the consumption of legume seed in the diet can potentially reduce serum cholesterol levels. Overall from the 5 conference sessions there are 52 papers. Of these 7 are major invited reviews on the current state of research in this important area for human and animal feeding.
