It unpacks the vernacular, the institutional structures, and the practices and performances that make up promotional culture in everyday life, offering diverse critical perspectives on how, as citizens, consumers, and

users, we absorb, navigate, confront, and resist its influence. Contributions from both renowned scholars and emerging intellectuals make this book a timely and valuable contribution to the fields of media and communication studies, political science, cultural studies, sociology, and anthropology." --BOOK JACKET. A key question for China, which has for some time been a leading global manufacturing base, is whether China can progress from being a traditional centre of manufacturing to becoming a centre for innovation. In this book, Shang-Ling Jui focuses on China's software industry and examines the complete innovation value chain of software in its key phases of innovation, standards definition, development and marketing. He argues that, except for software development, these key phases are of high added-value and that without adopting the concept of independent innovation as a guiding ideology, China's software enterprises - like India's - would have an uncertain future. In other words, the lack of core competence in the development of China's software industry might restrain the industry from taking the leading position and drive it towards becoming no more than the software workshop of multinationals

over the long term. Shang-Ling Jui contends that China's software industry should and can possess its own complete innovation value chain. Having worked in China's software industry for many years, the author provides an inside-out perspective - identifying the strengths and weaknesses of the industry and defining the challenges in China's transition from "Made in China" to "Innovated in China." The shopper marketing methodology is a powerful, complete approach for satisfying target consumer demand at the point of maximum influence, and thereby driving consumers to purchase. It gives companies a far deeper understanding how consumers behave as shoppers, and leverages this intelligence across the entire supply chain to benefit all stakeholders: companies, brands, consumers, retailers, and shoppers. Shopper marketing requires supply chain partners to smoothly integrate complex sets of marketing and sales tools, in order to engage shoppers, build brand equity, and persuade shoppers when they move into "shopping mode." Internally, it also demands deeper coordination of R and D, marketing innovation, operations, logistics, and distribution. It isn't easy, but it offers remarkable, proven results that are virtually unachievable any other way. In Shopper Marketing , three of the field's pioneering innovators and consultants bring together state-of-the-art insights, strategic approaches, and supply chain execution methods for successfully employing shopper marketing initiatives

throughout your organization. Dan Flint, Chris Hoyt and Nancy Swift clearly explain what shopper marketing is, and why it is critical for marketers to master. They review each of its six objectives and eight foundational principles, demonstrating how to adapt and apply it in your environment, overcome obstacles, and systematically create value along your entire "path to purchase." Drawing on their unsurpassed consulting experience, they also assess emerging trends and their implications, helping you deepen customer loyalty, extend competitive advantage, and improve profitability for years to come. Industrial clusters in Silicon Valley, Hsinchu Park, and northern Italy, and in the vicinity of Cambridge, U.K., have captured the imagination of policymakers, researchers, city planners and business people. Where clusters take root, they can generate valuable spillovers, promote innovation, and create the critical industrial mass for sustained growth. For cities such as Kitakyushu, Japan, that are faced with the erosion of their traditional industrial base and are threatened by economic decline, creating a cluster that would reverse the downward trends is enormously attractive. Growing Industrial Clusters in Asia offers

practical guidance on the nature of clusters and the likely efficacy of measures that could help build a cluster. It draws on the experience of both established dynamic clusters and newly emerging ones that show considerable promise. The insights that result from its analysis will be of particular interest to policy makers, urban planners, business people, and researchers. This book presents theories and case studies for corporations in developed nations, including Japan, for designing strategies to maximize opportunities and minimize threats in business expansion into developing nations. The case studies featured here focus on Asia, including China and India, and use examples of Japanese manufacturers. Five case studies are provided, including Hitachi Construction Machinery and Shiseido in China and Maruti Suzuki in India. These cases facilitate the reader's understanding of the business environments in emerging economies. This volume is especially recommended for business people responsible for international business development, particularly in China and India. In addition, the book serves as a useful resource for students in graduate-level courses in international management. For more than 40 years,

Many companies have a complex process for purchasing software that is required by IT projects, or better, by the business. Usually software is purchased by a centralized procurement function, and is either purchased on a project-by-project basis or as a large periodic software contract. Unfortunately purchasing software products does not automatically mean that these products are exploited throughout the organization providing the maximum possible value to the business units. Several issues call for a structured approach that gets the most business value out of software already purchased. The objectives of this approach are to: Create maximum awareness throughout the organization of the software purchased. Track software use in IT projects and act if products are not used at all, used improperly, or insufficiently used. Facilitate use of software products in projects, especially

when software products are complex and require a lot of integration. We can summarize the overall objective of this approach as ensuring that the business units in an organization obtain the maximum possible value of software products purchased, which is also the scope of this IBM® Redbooks® publication. The United States has the highest documented incarceration rate in the world; in 2008, for every 100,000 citizens, 764 were in jails or prisons. With nearly half of ex-convicts committing crimes after their release, numerous support programs exist to facilitate their successful reintegration to

society. This is a directory of ex-offender programs run by the national government as well as by individual states (and Puerto Rico, Virgin Islands, Washington, D.C.). Addresses, phone numbers and web sites are listed for all organizations that aid the ex-convict in locating employment, housing, support groups, clothing and food. A vital resource for both organizations and individuals interested in the rehabilitation of released offenders. A practical guide for providing exceptional client service Most advertising and marketing people would claim great client service is an elusive, ephemeral pursuit, not easily characterized by a precise skill set or inventory of responsibilities; this book and its author argue otherwise, claiming there are definable, actionable methods to the role, and provide guidance designed to achieve more effective work. Written by one of the industry's most knowledgeable client services executives, the book begins with a definition, then follows a path from an initial new business win to beginning, building, losing, then regaining trust with clients. It is a powerful source of counsel for those new to the business, for industry veterans who want to refresh or validate what they know, and for anyone in the

middle of the journey to get better at what they do. For more than 40 years, Computerworld has been the leading source of technology news and information for IT influencers worldwide. This IBM® Redpaper™ publication presents the process and steps that were taken to move from an R language forecasting solution to an IBM SPSS® Modeler solution. The paper identifies the key challenges that the team faced and the lessons they learned. It describes the journey from analysis through design to key actions that were taken during development to make the conversion successful. The solution approach is described in detail so that you can learn how the team broke the original R solution architecture

into logical components in order to plan for the conversion project. You see key aspects of the conversion from R to IBM SPSS Modeler and how basic parts, such as data preparation, verification, pre-screening, and automating data quality checks, are accomplished. The paper consists of three chapters: Chapter 1 introduces the business background and the problem domain. Chapter 2 explains critical technical challenges that the team confronted and solved. Chapter 3 focuses on lessons that were learned during this process and ideas that might apply to your conversion project. This paper applies to various audiences: Decision makers and IT Architects who focus on the architecture, roadmap, software platform, and total cost of ownership. Solution development team members who are involved in creating statistical/analytics-based solutions and who are familiar with R and IBM SPSS Modeler.
