The objective of this book is to analyze within reasonable limits (it is not a treatise) the basic mathematical aspects of the finite element method. The book should also serve as an introduction to current research on this subject. On the one hand, it is also intended to be a working textbook for advanced courses in Numerical Analysis, as typically taught in graduate courses in American and French universities. For example, it is the author's experience that a one-semester course (on a three-hour per week basis) can be taught from Chapters 1, 2 and 3 (with the exception of Section 3.3), while another one-semester course can be taught from Chapters 4 and 6. On the other hand, it is hoped that this book will prove to be useful for researchers interested in advanced aspects of the numerical analysis of the finite element method. In this respect, Section 3.3, Chapters 5, 7 and 8, and the sections on "Additional Bibliography and Comments" should provide many suggestions for conducting seminars. The 4e of *The Science and Technology of Rubber* provides a broad survey of elastomers with special emphasis on materials with a rubber-like elasticity. As in previous editions, the emphasis remains on a unified treatment of the material, exploring chemical aspects such as elastomer synthesis and curing, through recent theoretical developments and characterization of equilibrium and dynamic properties, to the final applications of rubber, including tire engineering and manufacturing. Updated material stresses the continuous relationship between ongoing research in synthesis, physics, structure and mechanics of rubber technology and industrial applications. Special attention is paid to recent advances in rubber-like elasticity theory and new processing techniques for elastomers. Exciting new developments in green tire manufacturing and tire recycling are covered. Provides a complete survey of elastomers for engineers and researchers in a unified treatment: from chemical aspects like elastomer synthesis and curing to the final applications of rubber, including tire engineering and manufacturing. Contains important updates to several chapters, including elastomer synthesis, characterization, viscoelastic behavior, rheology, reinforcement, tire engineering, and recycling. Includes a new chapter on the burgeoning field of bioelastomers. This book constitutes the refereed proceedings of the 5th International Conference on Pattern Recognition and Machine Intelligence, PReMI 2013, held in Kolkata, India in December 2013. The 101 revised papers presented together with 9 invited talks were carefully reviewed and selected from numerous submissions. The papers are organized in topical sections on pattern recognition; machine learning; image processing; speech and video processing; medical imaging; document image processing; soft computing; bioinformatics and computational biology; and social media mining. Four brothers embark on a journey, takes them to a world that they have never heard of before. They become more and more intrigued, especially when they find that the citizens of Kavosava already know who they are, and treat them like royalty. After travelling to different parts of the land, they realize they have returned to Kavosava to assist the people in ridding themselves of the evil Lord Whipstein and his minions. Pioneering work on the musical material from the archives of the English court was undertaken by Nagel (1894), Lafontaine (1909) and Stokes (in the *Musical Antiquary* 1903-1913). *Records of English Court Music* (a series of seven volumes covering the period 1485-1714) is the first attempt to compile a systematic calendar of such references. It aims to revise these earlier studies where necessary, adding significant details which researchers omitted, clarifying the context of documents and substituting current call-marks for defunct references. Volume V is primarily concerned with the post-Restoration years already partially covered in volumes I and II. The material from the Exchequer and Declared Accounts of the Treasurer of the Chamber has been revised to include references to trumpeters and drummers. Other sections are devoted to material outside the Lord Chamberlain's papers: the Signet Office Docquet Books, Secret Service accounts and more from the Exchequer; the Corporation of Musick (controlled by the Court musicians) and to the range of music material from accounts of the Receivers General. Samples from the comprehensive records of the Lord Steward's department (including those of the Cofferer of the Household) are also provided. Andrew Ashbee was the winner of the Oldman Prize in 1987 for Volume II in the series of 'Records of English Court Music',

awarded by the UK branch of the International Association of Music Libraries for the year's best book on music librarianship, bibliography and reference. This book contains the proceedings of the third in a now-biennial series organized by the Wessex Institute of Technology around the urgent need to determine solutions regarding sustainable development before our planet reaches a point of irreversibility. The aggressive search for new sources of energy and materials, the rapid rate at which natural resources are being consumed, and the destructiveness of the resulting pollution are all having a negative impact on the planet that needs to be stopped, if not reversed. As at the first two, participants at this conference will take stock of our situation and try to facilitate constructive principles and policies for a way forward, something that can only be done by transdisciplinary cooperation. Thus papers will examine ethical, political and social issues, health, safety and risk, lessons from nature, planning and development, and new technologies. This book introduces the most inspiring progress in the production of ferronickel from laterite ores, from both theoretical and technological perspectives. Based on a detailed overview of nickel utilization from laterite ores, it provides the advances of four main methods for laterite ore processing, including the solid-state reduction-magnetic separation process, the rotary kiln reduction-electric arc furnace smelting process, the Krupp-Renn process, and the sintering-blast furnace smelting process. Moreover, for mediating the adverse impacts of the byproducts in ferronickel and subsequent stainless-steel making, it presents pioneering technologies of utilization of ferronickel slag for producing value-added functional materials and recycling of stainless-steel pickling sludge for ferronickel making. This book is expected to offer the audiences a fascinating new insight into ferronickel making and related by-products valorization. The present book discusses the principal lignocellulosic precursors used in the elaboration of activated carbons in different countries such as Asia, America, Europe and Africa; the different methods and experimental conditions employed in the synthesis of activated carbons, including one analysis of the principal stages of the preparation such as carbonization and activation (i.e., chemical or physical activation). Also, the recent and more specialized techniques used in the characterization of activated carbons are discussed in this book. For example, the techniques employed to determine textural parameters (mercury porosimetry and gas adsorption isotherms at 77 K) and different spectroscopies to determine chemical functionality (Raman, FT-IR, etc.) and other X-Ray techniques. Additionally, an overview of the application of activated carbons obtained from lignocellulosic precursors for wastewater treatment. Specifically, the analysis and discussion are focused on the advantages and capabilities of activated carbons for the removal of relevant toxic compounds and pollutants from water such as heavy metals, dyes, phenol, etc. Finally, the use of pyrolysis method for the valorization of two Mexican typical agricultural wastes (orange peel and pecan nut shell) for energy and carbon production is considered in this book.
