This new book serves the purposeful need for students of diploma in engineering whose courses of study follows this book in two volume . Vol (I) deals with basic physics in which we have discussed Units & Measurement , Heat , Light & Modern physics .The volume (II) widely covers with Applied Physics in which we have discussed Kinematics and some

chapter of General Physics like Angular motion & Simple Harmonic motion and kinetics . This volume also covers the study of Non - destructive testing of materials as well as Acoustics of building . Chapter 1.2 (i) explains about rest & motion in one dimension in a given frame of reference of the observer in brief . On the basis of the above definition the observer frame of reference has been divided into two categories in chapter 1.2(ii) as Inertial & Non -inertial frame of reference in which it has been briefly explained using Newton law of motion as inertial frame of reference on the other hand a frame of reference in which Newton law of motion cannot be defined is called Non-Inertial frame of reference with an example as Earth is an Inertial frame of reference but since it is revolving around the sun it may not be strictly speaking to be an Inertial frame of reference . In chapter 1.2(iii) the of Definition of Distance, Displacement, Speed , Velocity and Acceleration has been illustrated with suitable diagram .After a brief introduction about the above physical quantities used to define the motion of a body Rectilinear Motion has been described with following equation as $v = u + at$, $S = ut + \frac{1}{2} a t^2$ & $v^2 = u^2 + 2as$ in chapter 1.2(iv) . Chapter 1.2(v) aims to study a body which is travelling a distance travelled in nth second .On the basis of which it became simpler to describe the uniform motion of a body in different interval of time . The above equation of

motion may be illustrated using Time -position graph in chapter 1.2(vi) and Velocity-Time Diagrams for uniform velocity in chapter 1.2(vii).Further in chapter 1.2(viii) the motion of a Uniform acceleration and uniform retardation and equations of motion for motion under gravity has been described extensively . In the next chapter 1.3: (i) Angular Motion is being defined with following parameter as angular displacement , angular velocity and acceleration . chapter 1.3(ii) gives Relation between angular velocity and linear velocity . Chapter 1.3(iii) has extensively discussed the three equation of motion for a body on circular path .As the above mentioned equation for distance travelled by a particle in nth second the Angular distance travelled by particle in nth second has been mentioned in chapter 1.3(iv) . In chapter 1.3(v) the definition of S.H.M. has been described as projection of uniform circular motion on any one diameter and Graphical Representation of displacement velocity, acceleration of particle in SHM for S.H.M. starting from mean position and from extreme position in chapter 1.3(vi). The next unit chapter 2.2:(i) begins with study of Concept of Force in which different types of forces in nature may have been classified . Chapter 2.2(ii) discusses two types of forces as Contact & Non-contact forces . Further study has been given with 2.2(iii) study the definition of momentum & 2.2(iv) Laws of conservation of linear momentum . An extensive study of effect of force on basis of

time of influence has been discussed as impulse & impulsive force in chapter 2.2(v). Chapter 2.2(vi) is a brief study of Newton's laws of motion with equations & applications. Chapter 2.2(vii) is the study of Motion of lift. In the next unit chapter 2.3(i) has been covered with the definition of work, Power & Energy. Chapter 2.3(ii) is Equation for P.E. & chapter 2.3(iii) is study of Work-Energy Principle with chapter 2.3(iv) is Representation of work by using graph & 2.3(v) is graphical study of Work Done by torque Chapter 3.2(i) explains the definition of material science as branch of applied science relation with solid state physics or solid state chemistry in which one can study about structure of material and their properties as a interdisciplinary study about materials for applicable purposes. Further chapter 3.2(ii) illustrate classification of materials in two categories in which material has been classified (a) Metals (e.g. Iron, Gold, Aluminum, Silver, Copper etc) & (b) Non-Metals (e.g. Leather, Rubber, plastics, asbestos, carbon etc). A detail study has been focussed on Testing methods of materials in chapter 3.2(III) for which the requirement of testing of materials is subjected for quality maintenance of the material in engineering for application purposes. A wide range of method has been described in detail for most cheap and suitable application of maintained quality of the material in industries. Despite

its advantages the limitations of N.D.T method has that has been covered in chapter 3.2(IV). The different names of N.D.T. Methods used in industries has been discussed in chapter 3.2(V) as X-ray radiography, Gamma-ray radiography, Magnetic particle inspection, Ultrasonic testing, Damping method & Electrical Method. are, you are not alone. I had been in your shoes before and experienced the same. It took me a hard time to find out what's wrong with my study method for Physics. Subsequently, I overcame the difficulties and scored in the subject. Physics is not a subject that you could effectively learn by memorising the theories by hard, and practising repetitively. It's all about understanding and relating the concepts to the real world (sometimes, you can get by mathematics and chemistry by not relating the theories and concepts to the real world right?). The best thing about Physics is that once you know the correct study techniques, it could become the easiest subject for you. This solution manual is a companion book written by the authors of "Understanding Physics like a Nerd without Becoming One & More". The character of the book solves the problems that were assigned at the end of each chapter. The authors believe their readers will be inspired by the tactics employed by Cassie to tackle the problems based on the lessons she learned from Professor James. This textbook introduces the fundamental concepts and practical applications in dynamics. Learning tools include problem sets, developmental exercises, key-concept lists, and a basic mathematics review. IBM software (with simultaneous equations solver) enables problem-solving with a computer. See also following entry. Annotation copyrighted by Book News, Inc., Portland,
