From the Editor This issue of *New Directions for Evaluation* (NDE) marks a milestone—the 25th anniversary of the American Evaluation Association (AEA). NDE is an official publication of AEA and has been a crucial means for the Association to foster and promote the professionalization of evaluation through thematic discussions of theory and practice in evaluation. NDE was first published in 1978 under the name *New Directions for Program Evaluation*, although the title became *New Directions for Evaluation* in 1995 in acknowledgment of the broader scope of evaluation. The current issue of NDE, on the 25th anniversary of AEA, looks not back but ahead. Because NDE is a thematic and guest-edited journal it tends to favor more mature, self-assured voices in evaluation. The journal format does not lend itself easily to showcasing the voices of novice evaluators, those just entering the field and who will be the next generation of evaluation practitioners and theoreticians. As such, NDE has chosen on this anniversary to highlight those voices. Included

are a number of chapters that build on what evaluation has already learned from other disciplines by introducing us to new possibilities. We are also challenged in the chapters to think about techniques or methods we use, both at a practical and conceptual level. Some chapters raise questions about who evaluators are, how they interact with others, and the roles they assume in their practice. Some young evaluators are confronting, in various ways, conundrums in thinking about and doing evaluation within organizations, either from an external or internal perspective. And issues in using technology in evaluation or challenges in evaluating technology are considered. In The Present Environment Of Increasing Global Competition, Marketing Has Emerged As The Key Factor In Any Commercial Enterprise. This Book Explains The Basic Principles, Strategies And Activities Involved In Marketing Management. Starting With The Fundamental Marketing Concepts, The Book Explains The Various Dimensions Of The Entire Marketing Management Process. It Then Discusses The Important Element Of Advertising With Reference To The Relevant Legal Provisions. Marketing Research Is Explained In Detail Along With Research Design And Mis. Analysis And Forecasting Of Consumer Behaviour Is Discussed Next, Followed By An Analysis Of Sales Management. Relevant Case Studies Drawn From The Indian Context Have Been Presented Throughout The Book To Illustrate The Basic Concepts And Strategies. Flow Charts And Diagrams Have Also Been Included For An Easier Grasp Of The Discussion. All These Features Make This Book An Excellent Text For Marketing Management Students. Professionals And Consultants Would Also Find It Very Useful. The automatic analysis of signals and images together with the characterization and elaboration of their

representation features is still a challenging activity in many relevant scientific and hi-tech fields such as medicine, biotechnology, and chemistry. Multidimensional and multisource signal processing can generate a number of information patterns which can be useful to increase the knowledge of several domains for solving complex problems. Furthermore, advanced signal and image manipulation allows relating specific application problems into pattern recognition problems, often implying also the development of KDD and other computational intelligence procedures. Nevertheless, the amount of data produced by sensors and equipments used in biomedicine, biotechnology and chemistry is usually quite huge and structured, thus strongly pushing the need of investigating advanced models and efficient computational algorithms for automating mass analysis procedures. Accordingly, signal and image understanding approaches able to generate automatically expected outputs become more and more essential, including novel conceptual approaches and system architectures. The purpose of this third edition of the International Conference on Mass Data Analysis of Signals and Images in Medicine, Biotechnology, Chemistry and Food Industry (MDA 2008; [www.mda-signals.de](http://www.mda-signals.de)) was to present the broad and growing scientific evidence linking mass data analysis with challenging problems in medicine, biotechnology and chemistry. Scientific and engineering experts convened at the workshop to present the current understanding of image and signal processing and interpretation methods useful for facing various medical and biological problems and exploring the applicability and effectiveness of advanced techniques as solutions. The book examines and annotates an actual case study to demonstrate to readers how to resolve some of the major issues of case study

research, for example : how the case is selected, how to generalize what is learned from one case to another, and how to interpret data. Other topics covered include : differences between quantitative and qualitative approaches, data-gathering including document review, coding, sorting and pattern analysis, the roles of the researcher, triangulation and reporting a case study. Case-based methods have a long history in the social sciences. They are extensively used and raise many practical and theoretical questions. This book provides a comprehensive, critical examination of case-oriented research. It offers concrete proposals about the best research methods and provides an unparalleled guide to the emergence and complexity of the field.

The Handbook: - Situates the reader in the essential theoretical and practical issues; - Demonstrates the unity and diversity of case-oriented research through an examination of case-based methods; - Distinguishes between case-based and case study research; - Elucidates the philosophical issues around case based methods; - Examines case-based work in the context of both social theory and theories of research methods. Each year, organizations spend millions of dollars trying out new innovations and improvements-and millions will be wasted if they can't quickly find out what's working and what is not. The Success Case Method offers a breakthrough evaluation technique that is easier, faster, and cheaper than competing approaches, and produces compelling evidence decision-makers can actually use. Because it seeks out the best stories of how real individuals have actually used innovations, The Success Case Method can ferret out success no matter how small or infrequent. It can salvage the few "gems" of success from a larger initiative that is not doing well or find out how to make a partially successful effort even more successful. The practical

methods and tools in this book can help those who initiate and foster change, including leaders, executives, managers, consultants, training directors, and anyone else who is trying to make things work better in organizations get the greatest returns for their investments. In *Unstable and Brittle Diabetes*, Geoff Gill brings together research on the management of brittle diabetes (or erratic glucose control), which is a controversial area in terms of definition and management and one that creates much debate among diabetologists. This monograph aims to help the diabetologist understand this troublesome condition. This book is concerned with action research as a form of teacher professional development. In it, John Elliot traces the historical emergence and current significance of action research in schools. He examines action research as a "cultural innovation" with transformative possibilities for both the professional culture of teachers and teacher educators in academia and explores how action research can be a form of creative resistance to the technical rationality underpinning government policy. He explains the role of action research in the specific contexts of the national curriculum, teacher appraisal and competence-based teacher training. This book helps practicing evaluators design and conduct competent evaluation studies, while explicitly considering resource and data constraints. The book is organized around a seven-step model developed by the authors, and which has been tested and refined in workshops that cater to a broad spectrum of evaluation practitioners. Vignettes from practice and case studies, representing evaluations from a variety of geographic regions and sectors, demonstrate adaptive possibilities for small projects with budgets of a few thousand dollars, or timelines as brief as a few days, to large-scale, long-term evaluations with multi-million-dollar budgets. The text is

specifically designed to incorporate quantitative, qualitative, and mixed-method designs. Does research influence public policy and decision-making, and if so, how ? [...] This book is the most recent to address this question, investigating the effects of research in the field of international development [...] It examines the consequences of twenty-three research projects funded by Canada's International Development Research Centre (IDRC) [...] [Ed.] This new edition incorporates revised guidance from H.M Treasury which is designed to promote efficient policy development and resource allocation across government through the use of a thorough, long-term and analytically robust approach to the appraisal and evaluation of public service projects before significant funds are committed. It is the first edition to have been aided by a consultation process in order to ensure the guidance is clearer and more closely tailored to suit the needs of users. In Germany, development cooperation is the policy field with the longest tradition in evaluation. All major German organisations in development cooperation use the instrument of evaluation - however, to different degrees with regard to qualitative and quantitative aspects. This study on behalf of the German Federal Ministry for Economic Cooperation and Development (BMZ) analyses methodically analyses the way the different organisations evaluate, how much they know about the impact of their projects and programmes, and if or how their evaluation systems can be integrated a larger whole. Until now, there has been no comparable analysis, neither in other German policy fields nor in development cooperation of other European countries. Because the investigation of cold cases is usually an arduous and time-consuming task, most law enforcement agencies in the United States are not able to dedicate the resources necessary to support the cold case investigation process. However, when those cases are fully pursued and prosecuted, they often result in convictions and lengthy prison terms. *Cold Cases: Evaluation Models with Follow-up Strategies for Investigators, Second Edition* saves law enforcement time by providing detailed guidelines for determining if a cold case is solvable, and if so, how to organize, manage, and evaluate the investigation. It also provides techniques for developing investigative strategies to complement the evaluation process and resolve the crime. This second edition features a new revised model and methodology for investigating cold cases suitable for all police and public safety agencies—large or small, domestic or international. This new model is more expeditious and convenient for departments that have less manpower and experience in dealing with cold cases. It emphasizes the prioritization of cold cases based on the availability of physical evidence and the chances of deriving matches from said evidence and an identified person of interest. Additional topics covered in the second edition include: How cases go cold Strategies for creating a cold case unit Cold case investigations in a Dutch educational environment—a chapter

written by members of the Dutch Police Academy New forensic science technologies, including DNA, CODIS, and AFIS Case studies demonstrating advances in suspectology Strategies for effective investigative interviewing Challenges posed by staged crime scenes in cold cases How to craft a cold case evaluation report The expert authors of this book maintain The Center for the Resolution of Unresolved Crimes and conduct training and consulting worldwide. Their practical book is designed to help law enforcement agencies resurrect long-forgotten cases, bringing closure to victims and holding accountable those who are responsible. This book is part of the Advances in Police Theory and Practice series Enhancing Evaluation Use: Insights from Internal Evaluation Units offers invaluable insights from real evaluators who share strategies they have adopted through their own experiences in evaluation. Readers will learn about the challenges, solutions, and lessons drawn from the experience of evaluators working in a wide range of organizations. Referencing the latest literature, contributors discuss factors that help or undermine attempts to foster an evaluative thinking and learning culture within an organization. Applicable in a wide range of situations, their accounts demonstrate the initiative and innovative thinking they use to address challenges in various, sometimes complex, evaluation settings. Questions at the end of each chapter stimulate thought and discussions about the issues raised and allow readers to apply their findings to their own situations. “This book speaks to a cutting-edge topic, that is, the potential to generalize program evaluation expertise to larger organizational questions, and the cases from multiple international contexts represent a unique feature.” —John Clayton Thomas, Georgia State University “The use of actual cases to highlight major concepts in evaluation in the public

sector is a great feature.” —Danica G. Hays, Old Dominion University “The text provides practical information from a variety of organizational contexts and the integration of international experiences provides for expanded discussion of evaluation theory and practice.” —Kathleen Norris, Plymouth State University “The key strengths of this book lie in its national, supra-national and international organizational contexts, its consistency in insider perspectives, and the detailed examples provided.” —Donna Haig Friedman, University of Massachusetts, Boston

**EVALUATION IN ORGANIZATIONS: A BOOK REVIEW** by Robert Picciotto, UKES Council Member (Excerpted) "The book of essays reviewed here was edited by two eminent evaluators. It fills an important gap in the literature: in pursuit of improved quality of evaluation products, evaluation thinkers have lavished attention on evaluation methods, ethics and use but they have sorely neglected evaluation governance issues and have largely failed to probe the workings of evaluation within organizations. All contributors to the book are seasoned practitioners. They hail from national, supranational and international organizations and many of them have trespassed across these thematic and organizational boundaries. They all are equipped to draw on a vast reservoir of hands-on experience as evaluation commissioners, managers, internal evaluators or external practitioners. Given its pragmatic focus the book is bound to elicit broad based interest among evaluation practitioners. While it addresses familiar dilemmas and challenges (evaluation independence, evaluation utilization, organizational learning, nurturing of an evaluation culture, etc.) it does so from the distinctive perspective of “insiders” who have had to contend with a variety of organizational constraints and management pressures. [It] should be of practical value to

teachers, students, professional evaluators as well as evaluation commissioners and programme managers. All in all, this is a book that belongs on your shelf if you are intent on enhancing the role that evaluation plays in your organization." This book is valuable to those involved in the evaluation of public organisations. Particularly insightful is the realization that similar challenges faced in various organizations are addressed with very different solutions.
