Facing Mount Kenya Jan 21 2020 Facing Mount Kenya, first published in 1938, is a monograph on the life and customs of the Gikuyu people of central Kenya prior to their contact with Europeans. It is unique in anthropological literature for it gives an account of the social institutions and religious rites of an African people, permeated by the emotions that give to customs and observances their meaning. It is characterised by both insight and a tinge of romanticism. The author, proud of his African blood and ways of thought, takes the reader through a thorough and clear picture of Gikuyu life and customs, painting an almost utopian picture of their social norms and the sophisticated codes by which all aspects of the society were governed. This book is one of a kind, capturing and documenting traditions fast disappearing. It is therefore a must-read for all who want to learn about African culture.

Digital Dreams Feb 14 2022 For the past half century, the Sony Corporation has been highly successful at tapping the seductive nature of consumer electronics. Around the globe their products are recognized as symbols of cutting-edge technology and innovative design, making Sony the undisputed leader in high tech and one of the most recognized brand names in the world. This book takes an unprecedented look inside the world's most influential design center and their products--many never before published--for the next millennium. With nearly 250 industrial designers--graphic, packaging, and logotype designers, user-interface specialists and Web designers--working in offices from Tokyo to San Francisco to Cologne, the Sony Design Center is responsible for nearly 2,000 new products, concepts, packaging schemes and design strategies every year. By shaping the most pivotal technologies of our time, the Design Center exerts a greater influence on popular culture and current trends in industrial and graphic design than any other single entity.--From publisher description.

Real-Time Concepts for Embedded Systems Oct 18 2019 '... a very good balance between the theory and practice of real-time embedded system designs.' —Jun-ichiro itojun Hagino, Ph.D., Research Laboratory, Internet Initiative Japan Inc., IETF IPv6 Operations Working Group (v6ops) co-chair 'A cl

Spacecraft Operations Dec 20 2019 This book describes the basic concepts of spacecraft operations for both manned and unmanned missions. The first part of the book provides a brief overview of the space segment. The next four parts deal with the classic areas of space flight operations: mission operations, communications and infrastructure, the flight dynamics system, and the mission planning system. This is followed by a part describing the operational tasks of the various subsystems of a classical satellite in Earth orbit. The last part describes the special requirements of other mission types due to the presence of astronauts, the approach of a satellite to another target satellite, or leaving Earth orbit in interplanetary missions and landing on other planets and moons. The 2nd edition is published seven years after the first edition. It contains four new chapters on flight procedures, the human factors, ground station operation, and software and systems. In addition, several chapters have been extensively expanded. The entire book has been brought up to date and the language has been revised. This book is based on the “Spacecraft Operations Course” held at the German Space Operations Center. However, the target audience of this book is not only the participants of the course, but also students of technical and scientific courses, as well as technically interested people who want to gain a deeper understanding of spacecraft operations.
