International Maths for Cambridge IGCSE Print and Online Student Book Apr 30 2021 An expert dual approach - with David Rayner injecting his well-known rigour and exact match to the Cambridge IGCSE(R) (0607) specification, plus IB Maths specialist Jim Fensom incorporating the enrichment and IB-focus needed for success in future IB study. The resource is fully up-to-date and matched to the latest Cambridge syllabus. It provides thorough exam support with a practice-based approach and plenty of worked examples to reinforce understanding. Free online access to resources focused on building assessment confidence, with revision help and a whole suite of past exam papers. This resource offers just the right amount of rigour for Cambridge IGCSE International Mathematics and is specially tailored for IB preparation, with integrated graphics calculator guidance providing invaluable support. A solid foundation which will sufficiently challenge students to hit the ground running in IB Maths.

The History of the University of Oxford: Volume VIII: The Twentieth Century Dec 15 2019 This study surveys how one of the world's major universities has responded to the formidable challenges offered by the 20th century. It presents the reader with insight into many aspects of British life and assesses the influence of the University of Oxford in the world sphere.

Valuations, Orderings, and Milnor $\mathbb{K}\mathbb{K}$ -Theory Feb 15 2020 This monograph is a comprehensive exposition of the modern theory of valued and ordered fields. It presents the classical aspects of such fields: their arithmetic, topology, and Galois theory. Deeper cohomological aspects are studied in its last part in an elementary manner. This is done by means of the newly developed theory of generalized Milnor $\mathbb{K}\mathbb{K}$ -rings. The

book emphasizes the close connections and interplay between valuations and orderings, and to a large extent, studies them in a unified manner. The presentation is almost entirely self-contained. In particular, the text develops the needed machinery of ordered abelian groups. This is then used throughout the text to replace the more classical techniques of commutative algebra. Likewise, the book provides an introduction to the Milnor K -theory. The reader is introduced to the valuation-theoretic techniques as used in modern Galois theory, especially in applications to birational abelian geometry, where one needs to detect valuations from their "cohomological footprints". These powerful techniques are presented here for the first time in a unified and elementary way.

Higher GCSE Mathematics Dec 27 2020 This book has been specifically written for the new two-tier GCSE specification for first examination in 2008. The book is targeted at the Higher tier GCSE, and it comprises units organised clearly into homeworks designed to support the use of the Higher Students' Book in the same series. Each unit offers: * Homework exercises directly related to the Students' book section * Exam-style homeworks to build confidence and practice key techniques * Routine practice to reinforce key skills and ideas. * Full answers in the accompanying answer book It forms part of a suite of two homework books at GCSE, in which the other book caters for the Foundation tier.

Advances in Ultrametric Analysis Nov 25 2020 This volume contains papers based on lectures given at the 12th International Conference on p -adic Functional Analysis, which was held at the University of Manitoba on July 2-6, 2012. The articles included in this book feature recent developments in various areas of non-archimedean analysis: branched values and zeros of the derivative of a p -adic meromorphic function, p -adic meromorphic functions $f^{\prime}P^{\prime}(f)$, $g^{\prime}P^{\prime}(g)$ sharing a small function, properties of composition of analytic functions, partial fractional differentiability, morphisms between ultrametric Banach algebras of continuous functions and maximal ideals of finite dimension, the p -adic q -distributions, Banach spaces over fields with an infinite rank valuation, Grobman-Hartman theorems for diffeomorphisms of Banach spaces over valued fields, integral representations of continuous linear maps on p -adic spaces of continuous functions, non-Archimedean operator algebras, generalized Keller spaces over valued fields, proper multiplications on the completion of a totally ordered abelian group, the Grothendieck approximation theory in non-Archimedean functional analysis, generalized power series spaces, measure theory and the study of power series and analytic functions on the Levi-Civita fields. Through a combination of new research articles and

survey papers, this book provides the reader with an overview of current developments and techniques in non-archimedean analysis as well as a broad knowledge of some of the sub-areas of this exciting and fast-developing research area.

Mathematics: IGCSE® Revision Guide Jul 02 2021 A concise revision guide for IGCSE Mathematics written by an experienced teacher and the author of the popular Core and Extended Maths for IGCSE books. Suitable for students of all ability levels, it provides not only revision material but a huge bank of practice questions. The language used is suitable for EAL students.

General Mathematics Feb 09 2022 General Mathematics: Revision and Practice is a comprehensive resource for self-study or teacher-led courses to take GCSE and Standard Grade candidates right up to A* Grade, or Scottish Credit level. This edition now includes a new chapter on investigations, practical problems and puzzles, to give the student problem-solving skills and practice ready for coursework. Key Points: · A complete course in one volume · Ease of accessibility to different maths topics · Graded questions, revision exercises and past examination questions · Ample quantity of material providing wide choice · Mathematics drawn out from a wide range of realistic everyday situations · Numerical answers provided at the back

Geometric Constructions Mar 30 2021 Geometric constructions have been a popular part of mathematics throughout history. The first chapter here is informal and starts from scratch, introducing all the geometric constructions from high school that have been forgotten or were never learned. The second chapter formalises Plato's game, and examines problems from antiquity such as the impossibility of trisecting an arbitrary angle. After that, variations on Plato's theme are explored: using only a ruler, a compass, toothpicks, a ruler and dividers, a marked rule, or a tomahawk, ending in a chapter on geometric constructions by paperfolding. The author writes in a charming style and nicely intersperses history and philosophy within the mathematics, teaching a little geometry and a little algebra along the way. This is as much an algebra book as it is a geometry book, yet since all the algebra and geometry needed is developed within the text, very little mathematical background is required. This text has been class tested for several semesters with a master's level class for secondary teachers.

Ultrametric Functional Analysis Jan 16 2020 This volume contains research articles based on lectures given at the Seventh International Conference on p -adic Functional Analysis. The articles, written by leading international experts, provide a complete overview of the latest contributions in basic functional analysis (Hilbert and Banach spaces, locally convex spaces, orthogonality, inductive limits, spaces of continuous functions, strict topologies, operator theory, automatic continuity, measure and integrations, Banach and topological algebras, summability methods, and ultrametric spaces), analytic functions (meromorphic functions, roots of rational functions, characterization of injective holomorphic functions, and Gelfand transforms in algebras of analytic functions), differential equations, Banach-Hopf algebras, Cauchy theory of Levi-Civita fields, finite differences, weighted means, p -adic dynamical systems, and non-Archimedean probability theory and stochastic processes. The book is written for graduate students and research mathematicians. It also would make a good reference source for those in related areas, such as classical functional analysis, complex analytic functions, probability theory, dynamical systems, orthomodular spaces, number theory, and

representations of p -adic groups.
