## Labour Inspection A Guide to the Labour Market Engineering UK 2006 Women in the Labour Party Uphill All the Way

First published in 1989. The oil crises of the 1970s and increasing international competitive pressures had profoundly changed the structure and performance of labour. Analysis of labour markets, and especially international comparisons, can be difficult, given the differences between definitions, scope, coverage of data, methods, presentation, and economic and social influence in different regions. This book is an invaluable guide for users of international labour statistics. It centralizes and co-ordinates, from a range of sources, basic statistical information regarding the labour force for a large number of countries. Individual chapters, by specialists in the particular subject areas, deal with eight key aspects relating to the labour markets of major, developed capitalist countries (OECD countries); working population, unemployment, wages, consumer prices, labour costs, hours of work, trade union membership, and industrial disputes. The book discusses the nature of the data sources and statistical compilations, highlights cross-national trends over the past fifteen years, outlines the inherent difficulties of making such cross-country comparisons, and points out the potential pitfalls of interpretation of which users are often insufficiently aware. The book includes a summary of key labour market data, on an individual country basis, for twenty-four OECD countries and twenty other countries. Fear of childbirth, the increasing use of epidurals and soaring caesarean section rates are the focus of much apprehension, debate, and controversy in contemporary maternity care. Across the world, support in labour has been shown to reduce obstetric interventions and improve outcomes for women and babies, yet women often report feeling unhappy with the support they receive. This textbook provides a clear and practical guide to

supporting women in labour, looking at a range of techniques and approaches that promote a safe and positive experience of birth for women and their families. Written by two highly experienced midwifery authors, this text draws on up-to-date research, identifying how evidence can be applied to everyday practice. It includes narratives from women and practitioners, including midwives, doulas, childbirth educators and students. These are used to illustrate a range of situations where the quality of support is central to the quality of the experience and outcome. Supporting Women for Labour and Birth encourages readers to reflect on their experiences and examine the evidence provided by both research and the experiences of women and practitioners in order to explore how this could be incorporated into their practice. The only book to deal directly with the practical and emotional issues associated with labour support, it is an ideal text for student midwives and an important reference for practising midwives, doulas and other childbirth practitioners. Topics covered include background, evaluation, policy, organization and management for labour inspection, sectoral aspects such as child labour, agriculture, non-commercial service sector, construction industry, labour inspection and hazards prevention. Providing an insightful analysis of the key issues and significant trends relating to labour within the platform economy, this Modern Guide considers the existing comparative evidence covering all world regions. It also provides an in-depth look at digital labour platforms in their historical, economic and geographical contexts. Water birth is the process of giving birth in water using a deep bath or birthing pool. Being in water during labour is shown to help with pain as well as being more relaxing and soothing than being out of water. The water can help to support your weight, making it easier to move around and feel more in control during labour. In this book the author, natural childbirth pioneer offers straight-forward guidance for both parents and midwives. This comprehensive and inspiring guide includes: - The benefits of

water in labour and birth - Is a waterbirth is the best option for you? - How water can help throughout your pregnancy - How to prepare for your water birth - The best way to use a birth pool - The experience of waterbirth - personal stories

The main aim of this practical Handbook is to strengthen counselling and communication skills of skilled attendants (SAs) and other health providers, helping them to effectively discuss with women, families and communities the key issues surrounding pregnancy, childbirth, postpartum, postnatal and post-abortion care. Counselling for Maternal and Newborn Health Care is divided into three main sections. Part 1 is an introduction which describes the aims and objectives and the general layout of the Handbook. Part 2 describes the counselling process and outlines the six key steps to effective counselling. It explores the counselling context and factors that influence this context including the socio-economic, gender, and cultural environment. A series of guiding principles is introduced and specific counselling skills are outlined. Part 3 focuses on different maternal and newborn health topics, including general care in the home during pregnancy; birth and emergency planning; danger signs in pregnancy; post-abortion care; support during labor; postnatal care of the mother and newborn; family planning counselling; breastfeeding; women with HIV/AIDS; death and bereavement; women and violence; linking with the community. Each Session contains specific aims and objectives, clearly outlining the skills that will be developed and corresponding learning outcomes. Practical activities have been designed to encourage reflection, provoke discussions, build skills and ensure the local relevance of information. There is a review at the end of each session to ensure the SAs have understood the key points before they progress to subsequent sessions. This textbook provides a clear and practical guide to supporting women in labour, looking at a range of techniques and tactics for getting them through it. Evidence-based care is a well established principle in contemporary healthcare and a

world wide health care movement. However, despite the emphasis on promoting evidence-based or effective care without the unnecessary use of technologies and drugs, intervention rates in childbirth are rising rapidly. Evidence-based Care for Normal Labour and Birth brings to light much of the evidence around what works best for normal birth which has, until now, remained largely hidden and ignored by maternity care professionals. Beginning with the decision about where to have a baby, through all the phases of labour to the immediate post-birth period, it systematically details research and other evidence sources that endorse a low intervention approach. The book: highlights where the evidence is compelling discusses its application where women question its relevance to them and where the practitioner's expertise leads them to challenge it gives background and context before discussing the research to date includes questions for reflection and practice recommendations generated from the evidence. Using research data, Evidence-based Care for Normal Labour and Birth critiques institutionalised, scientifically managed birth and endorses a more humane midwifery-led model. Packed with up-to-date and relevant information, this controversial book will help all students, practising midwives and doulas keep abreast of the evidence surrounding normal birth and ensure their practice takes full advantage of it. Briefly provides standards for organising a system of labour inspection. Its purpose is to promote a fuller understanding of the principles underlying the organisation, staffing and procedures of the service.
