Practice and Innovations in Sustainable Transport Feb 27 2021 The book continues with an experimental analysis conducted to obtain accurate and complete information about electric vehicles in different traffic situations and road conditions. For the experimental analysis in this study, three different electric vehicles from the Edinburgh College leasing program were equipped and tracked to obtain over 50 GPS and energy consumption data for short distance journeys in the Edinburgh area and long-range tests between Edinburgh and Bristol. In the following section, an adaptive and robust square root cubature Kalman filter based on variational Bayesian approximation and Huber's M-estimation is proposed to accurately estimate state of charge (SOC), which is vital for safe operation and efficient management of lithium-ion batteries. A coupled-inductor DC-DC converter with a high voltage gain is proposed in the following section to match the voltage of a fuel cell stack to a DC link bus. Finally, the book presents a review of the different approaches that have been proposed by various authors to mitigate the impact of electric buses and electric taxis on the future smart grid.

Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz – rich cars, poor quality. There's only one Saturn you should buy. Toyota – enough apologies: "when you mess up, 'fess up."

Energy and Society Jul 23 2020 This book deals with a pivotal issue often marginalized by sociological analysis: the relationship between energy and society, with different contributions from several European scholars. The articles cover a series of topics concerning energy policies, risk communication, and sustainable development. The increasingly complex social organization emerging from the energy shifts of the last two centuries, incorporates an increasing quantity of expert knowledge. Quite paradoxically, when the expert systems seem to be realizing the dream of total control on the uncertainty of the events, any occasional accident reveals to be a check for them contributes to undermining their credibility. Following the idea of a post-democratic turn, this kind of mistrust can be considered a different face of political elites and politics in general, in the frame of a radical change concerning political culture in the last several decades. This change is clear in areas such as risk communication, governance, and energy policies.
