In 2016, Americans fed up with the political process vented that frustration with their votes. Republicans nominated for president a wealthy businessman and former reality show host best known on the campaign trail for his sharp rhetoric against immigration and foreign trade. Democrats nearly selected a self-described socialist who ran on a populist platform against the influence of big money in politics. While it is not surprising that Americans would channel their frustrations into votes for contenders who pledge to end business as usual, the truth is that we don't have to pin our hopes for greater participation on any one candidate. All of us have a say—if we learn, master and practice the skills of effective citizenship. One of the biggest roadblocks to participation in democracy is the perception that privileged citizens and special interests command the levers of power and that everyday Americans can't fight City Hall. That perception is undoubtedly why a 2015 Pew Charitable Trusts survey found that 74 percent of those Americans surveyed believed that most elected officials didn't care what people like them thought. Graham and Hand intend to change that conventional wisdom by showing citizens how to flex their citizenship muscles. They describe effective citizenship skills and provide tips from civic experts. Even more importantly, they offer numerous examples of everyday Americans who have used their skills to make democracy respond. The reader will see themselves in these examples of citizens who chose to be victorious participants rather than tranquil spectators in the arena of democracy. By the end of the book, you will have new confidence that citizen participation is the lifeblood of America -- and will be ready to make governments work for you, not the other way around. This report describes the operation and use of a new numerical model, GNWave. This model was designed to simulate the evolution of a train of two- dimensional waves in waters of arbitrary bottom topography, varying from shallow water to waters of moderate depth. The program uses the Green-Naghdi theory of fluid sheets as its model, and integrates a set of coupled, nonlinear partial differential equations in time to perform the simulation of surface gravity waves. Report 1 in this series, entitled 'Application of the Green-Naghdi theory of fluid sheets to shallow water wave problems', contains a detailed description of the mathematical basis of GNWave model. The model GNWave has been shown to reproduce with engineering accuracy the evolution of a wave of permanent form, from small amplitudes up to almost breaking conditions. The numerical model is portable with little or no changes to a wide variety of platforms, and has successfully been tested on high-end PC's and VAX and CRAY mainframe systems. The governing equations were programmed using Fortran as the language. The program consists of a main program and a number of modules to perform the calculations. A functional flow chart of individual routines involved in the computation is included herein. The main routine directs the sequence of the calculation, including the reading of the input and integration of the equations, and performs some post-processing. Includes a primer and glossary of terms. Well... my experiences in life have taught me a few lessons... No one was put on this earth without a purpose and just like an 'Instruction Manual' is supplied by a manufacturer who is best placed to provide instruction on a product's purpose and how best to use it, our Maker has our 'Instruction Manual'. Unfortunately, we don't like to go to Him and ask the all-important question; why was I created and formed this way and how do I best use me? If you are like me, the only time I would ever use an instruction manual is when a product is broken and I have done everything to fix it to no avail. By this time, I have wasted valuable time which I would have saved if only I had just read the manual in the first place. For a long time, I was a broken product who tried everything to fix my brokenness until I finally gave up control over to God who then took me back to the potter's wheel. As He began to mold me again, He started unfolding His original plan and showing me how I can still use my experience to fulfill it.
